I wish to place on record my appreciation of the help given by the following in the perparation of the Special Migration tables.

1 Sri J. R. Ramanathan
Deputy Superintendent of Census Operations

2 Sri M. K. Subramaniam

3 Sri M. Panchapakesan

4 Sri D. Ranganathan

5 Sri P. Vasudhev

6 Sri T. S. Nagarajan

7 Sri Jeyaraj Chistopher

8 Kum. K. Shantakumariamma

9 Sri T. Balakrishna kurup

10 Sri V. Balan Nambiar

11 Sri A. Babu

12 Sri R. Lakshminarayanan

13 Sri V. Venkata Rao

14 Sri V. Seshasayee

In particular Sri D. Ranganathan has been helpful in getting this volume ready.

I am also grateful to Kasthuri printers for printing this volume in good time.

PREFACE

The special tables on migrants to Madras City presented in this volume contain data on the following characteristics of migrants:

1. Birth place
2. Duration of residence
3. Classification of migrants by age groups
4. Educational qualification
5. Industrial categories of workers among migrants
6. Occupational classification
7. Marital status of migrants
8. Religion
9. Rural/urban classification.

Next to birth and death, migration is the most important factor influencing the growth of any city, district, state or country. A knowledge of the geographic origin of the population is a prerequisite for the analysis of the growth and distribution of population. The 1961 Census questionnaire contained three questions on migration. The questions are (1) Place of birth (2) Duration of residence in the place of enumeration and (3) whether the birth place was rural or urban. The data on place of birth indicate only the quantum of migration and the distribution of migrants. But the data on duration of residence not only help us to study the migration trends during the definite periods of time but also add to the information about the permanency of stay of migrants. While the question on the place of birth and duration of residence yield valuable information on the quantitative aspect of migration the question on rural - urban gives data on qualitative aspect of migration trends from rural to urban and vice versa.

The D - series tables presented in Part II-C (II) contain comprehensive data on the following characteristic of migrants,

1. Birth place
2. Rural and urban classification of birth place
3. Duration of residence
4. Nationality.

To elicit information on the birth place, the enumerators were instructed to ask the following questions in the order of applicability as indicated below:

(i) Were you born in this Village or Town? If not, were you born in another village or town in this district?

(ii) If you were born outside the district, in which district were you born?

(iii) If you were born in another State in India, in which district and State were you born?

(iv) If you were born in another country outside India, in which country were you born?

(v) If you were not born in any of these places were you born at sea or air or in a railway carriage or in any other form of transport?

The instructions to the enumerators for recording answers to these questions were as follows:

(i) Write P. L. for persons born in the place of enumeration

(ii) Write D for persons born in another Village or Town of the District of enumeration.

(iii) For persons born in another district of Madras State, write the name of the district.

(iv) In the case of persons born in another state write the name of the district and the state of birth

(v) For persons born outside India, the name of the country should be recorded

(vi) If a person was born at sea or in air or in a railway carriage or in any other vehicle, the xact particulars should be entered.

To elicit the information on the rural/urban classification of the birth place, the enumerators were instructed to ask the following questions:

(i) If you were not born in this Village or Town were you born in a Village or Town outside?

(ii) Is the place where you were born considered a village or town?

The next question posed to the people born outside the place of enumeration related to the duration of residence. The duration of residence was recorded only in completed years and in all cases of less than one year, the number of months were not enquired into but they were indicated by a "O". In noting the duration of residence, the period of temporary absence spent outside on leave, holiday, tour or business was not taken into account.

A total number of 6 Tables were prepared and presented in Part II-C (II). They are:

Table D I	Non-Indian nationals classified by their nationalities
Table D II	Migrants classified by their places of birth
Table D III	Migrants classified by their places of birth and durations of residence in the place of enumeration
Table D IV	Migrants to cities classified by sex, broad age groups, educational levels and occupational divisions and groups in the case of workers.
Table D V	Migrants to the cities from the rural and urban areas classified by duration of residence
Table D VI	Migrants classified according to their places of origin and categories of workers and non-workers.

But Registrar-General felt it would be necessary to study in greater detail the migrants to cities with a population of over one million. The nature of occupations and industries which attract people and types of migrants—whether skilled or unskilled as reflected in their educational attainments, permanancy of stay as revealed by duration of residence are the important particulars required for a proper understanding of the problems posed by migrants swarming the cities.

The slips of Madras City were therefore resorted after the sorting for general tabulation was completed. At first the unit of tabulation was Corporation Division but there were 100 divisions and it was a tedious process to maintain Division as a unit. Therefore the city was divided into four zones as follows :—

1. Manufacturing area : Divisions 1—12, 21, 25 and 31—49.
2. Trade & Commerce area : Division 13-20, 26-30 and 63—66
3. Old residential area : Divisions 50, 52—62 and 67—88.
4. New residential area : Divisions 51 and 89—100

The following tables were prepared :

Table 1 :	Migrants classified by sex, broad age group, educational standards and by category of worker and non-worker
Table 2 :	Migrants classified by sex, religion, birth place and duration of residence
Table 3 :	Migrants classified by sex, duration of residence, age group and educational standard
Table 4 :	Migrants classified by sex, duration of residence, age group in case of worker by occupational division
Table 5 :	Migrants classified by sex, duration of residencel age group, and in the case of worker by industria division and major group
Table 6 :	Migrants classified by sex, duration of residence, age group and marital status.

The contents of each table are indicated in fly leaf to each table and an analysis of migration data is presented in the preliminary note.

P. K. NAMBIAR.

PRELIMINARY NOTE

The data on migration have in the past been rather scanty and inadequate for detailed analysis. Kingsley Davis in his book: "The population of India and Pakistan" has stated as follows :—

"Our information on internal migration in the Indian region is scanty and indirect. There was, before the creation of Pakistan, no check whatsoever on the movement of persons across provincial and state borders. The only information available concerns the place of birth data gathered by the census, plus some descriptive material and linguistic data.

In general, the place of birth returns are roughly accurate. Sometimes the birth place of children is arbitrarily assigned to the place of residence of the parent, and sometimes the birthplace question is not answered in an intelligible fashion, but on the whole the data are susceptible to correction and have seemingly improved as time has gone on.

The main difficulty does not lie in the accuracy of birth place material but in its use as an index of migration. A person's place of birth may be accidental. Hindu wives, for example, usually return to their parent's home for their first confinement; if this happens to be a few miles across a provincial or district boundary, the child then becomes an "immigrant" at the next census. Again the child may be born while its mother is travelling. Similarly the place of enumeration may be fortuitous, having nothing to do with the individual's regular place of residence. The Indian *de facto* census did not, except partially in 1941, attempt to ascertain the normal residence; consequently casual visitors, religious pilgrims, railway passengers etc., are counted in the population of the district or province where found. Finally the difference between place of birth and place of enumeration gives no indication of the number of moves the individual may have made during his life time. At best the analysis of birthplace data at different censuses can give but a sketchy picture of the actual movement of the people. Eventhough many of the fortuitous factors cancel out, the full details of internal migration cannot be known."

The above observation of Kingsley Davis is presented in order to explain the difficulty involved in effecting a comparative study of pattern of migration from 1891-1961. However the only data that can be compiled from earlier census reports is the number of persons enumerated in Madras City but who were born outside Madras City. Information is fortunately available because Madras City formed a separate district in all the censuses.

Before tracing the migration pattern during earlier decades it will be of interest to study the forces motivating migration. The rural urban movement may be classified into two categories—those at home in the rural village which "push" the individual toward the city and those in the city itself which "pull" him there. The two are of course mutually dependent because a "push" in the village might not be so regarded if there were no "pull" in the city and vice versa. Kingsley Davis has made the following observations :-

(1) *Village Pressure*:- To Western eyes the plight of the agricultural villages is itself sufficient to explain a mass migration movement. The extremely high density of agriculturalists on arable land, the excessive and hopeless character of rural indebtedness, the progressive sub-division and fragmentation of holdings, the bankrupting recurrence of droughts and crop failures, the inefficient modes of cultivation and stockraising, the uncertainty of foreign and local markets—all conspire to make the peasant's life unbearably hard. Indeed, any one acquainted with the mass flight of farmers from blighted areas in the United States, would expect an irresistible mass movement in this Asiatic region.

The astonishing thing, however, is the unwillingness of the peasant to move. Until the depression of 1930 there were more complaints in industry of a shortage of labor than of an over supply of it. Businessmen had to spend time and effort recruiting labor. Even recently there was still an active recruitment carried on in connection with the Assam tea gardens.

Furthermore, the areas from which migrants come are fairly limited in extent, and it is hard to prove that conditions there are much worse than they are in other parts of the subcontinent. "The region comprising Bihar, Chota Nagpur, the eastern districts of the Central Provinces, some of the northern parts of Madras, and a few of the districts of the United Provinces constitutes the largest and the most important source of labour-supply in India. In Bengal local labour for the Mills has always been scarce." Evidently the Indian peasant does not react to adverse conditions in the same way as the American farmer. If conditions of absolute famine prevail he may migrate in large numbers, but as long as the starvation is gradual he tends to remain at home. It is not simply that he is unaware of better conditions elsewhere, but that he defines "good" and "bad" conditions in a somewhat different sense. To him the agricultural way of life in the local village is a superior way of life, and the close association with his relatives, neighbors, and caste fellows is eminently desirable. He is willing to make a considerable economic sacrifice in order to retain these advantages. Homesickness weighs heavily upon him. In short, the rural environment not only pushes him out, but also pulls him in. Certain features of it are to him a burden, but others are an advantage. He wants to live there at almost any price.

(2) *City Advantage vs. City Repulsion*: In the past in India the inducement the city has had to offer has been almost exclusively economic. The "glittering life" of the city, the faster pace, the greater opportunities, the wider social horizon—all have meant little to the average Hindu or Muslim villager or have seemed positively evil. He has generally come to the city for one reason only—to find remunerative work--and since this was a means rather than an end in itself, he has not regarded the city as a permanent place of abode. He sha

tended to stay in the city only temporarily, until he had an opportunity to return to the village.

Why does the ryot thus dislike the city? Why does he go there only under economic compulsion? One reason certainly lies in the traditional ruralism of Indian life. The ryot's traditions, associations, and habits are all rural in character. But this is from the side of the attractiveness of the rural village. Is there anything in the city itself which is repellent? The answer is that the rapidly developing industrial city in this part of the world has recapitulated all of the evils through which the industrial city elsewhere has passed. Housing conditions, working conditions, recreational facilities, and sanitary conveniences have all been incredibly bad, and food has been scarce and unwholesome. Even the Westerner who thinks that life begins and ends in the city would find the rural village, for all its filth and monotony, a preferable place to live. The development of industrial cities in India, under conditions of laissez-faire economy in an extremely competitive world, has produced some of the worst urban conditions ever known.

These urban conditions make the peasant want to stay in the city only so long as he has to. Furthermore, they make him reluctant to bring his family there. Wives and children tend to be left at home. Restrictions on child and female labor further reduce the possibility of bringing the family. Hence the Indian and Pakistani cities probably have the most distorted sex ratios of any large group of cities in the world.

The failure of the worker to bring his family makes the city all the more unattractive as a place of residence, and increases the worker's desire to get back to the home village as soon as possible. It also increases the amount of prostitution and demoralizing recreation in the city. To the peasant the city is simply a little bit of hell which fortunately is not eternal.

The effects of Rural-Urban Migration: As a consequence of his distaste for urban life the peasant who has migrated to the city tends to keep in contact with his local village. He often sends remittances, and returns to the village when he is out of work, when he is needed there, when an important ceremony is taking place, or when he is sick. If he recruits additional labor for his employer, he is likely to get it from his own village. Looked at from the point of view of the migrant, the rural village is a sort of insurance against disaster. He can always return there in time of need. "In sickness and in maternity, in strikes and in lockouts, in unemployment and in old age the village home is a refuge for many".

From the point of view of the village itself, the rural focus of the city worker is a financial and intellectual boon. Not only are the emigrant's remittances of value, but the savings he brings home after several months' absence are a valuable addition to the local capital. Furthermore, the migrant constitutes a direct contact with the city and helps diffuse to the countryside the urban intellectual ferment—above all, the urban conception of individualism, efficiency and relativity. The emigration to the city presumably drains off surplus population and thus aids slightly the demographic problem of the rural village, but this is counterbalanced by the fact that the emigration also takes away the able-bodied and capable workers, and leaves the young, the old, and the crippled to carry on agricultural production.

From the point of view of industry the rural focus has the effect of producing an unusually high turnover in the labor force. The peasant works in the factory until illness unemployment, or nostalgia drives him back to the village, or until he has saved enough money to go back pridefully. In a large number of factories 5 per cent of the workers leave each month. Such rapid labor turnover entails a serious loss of efficiency. "It also means that in most factories there is at hand a supply of substitute, or 'badlis' to take the places of those who have gone away with or without giving notice. These 'badlis' form a heavy charge on the wages bill, and their presence in large numbers among the regular labour force gives rise to much irregularity of employment." The high turnover not only lowers the efficiency of labor, as compared to the labor of Europe or Japan, but it also affects adversely the formation of responsible labor unions, the enforcement of labor legislation, the acquisition of skills, and the quest for higher wages. The degree of turnover varies, of course, from one city to another. Generally it is higher in the larger cities than in the smaller. It is extremely high in Bombay and Calcutta, but lower in Ahmedabad, Sholapur and Madras."

The statement below indicates the percentage of migrants to total population in each census from 1891.

Year	Total migrants	Percentage of migrants to total population
1891	127,172	28.1
1901	160,623	31.5
1911	173,344	33.4
1921	176,500	33.4
1931	225,225	34.8
1941	N.A	N.A
1951	574,425	40.5
1961	642,828	37.1

It is observed that percentage of migrants to total population of the city has not varied much except in 1951 whenit reached 40.5%. Otherwise a gradual increase from decade to decade is noticed. No adjustment for changes in the boundary of Madras City has been made.

But the sex ratio among migrants has not varied uniformly as can be seen from the following statement.

Year	Sex ratio among migrants (females per 1,000 males)
1891	911
1901	891
1911	849
1921	754
1931	784
1941	NA
1951	814
1961	842

More than 40% of migrants moved into Madras City from Chingleput district during 1901 and 1911. But during 1921 the percentage was slightly less-36·9%. The second important district which contributed to the increase in population of Madras City is North Arcot. About 16% of migrants from North Arcot settled down in Madras during 1901 and about 13% in 1911 and about 10% in 1921. South Arcot and Thanjavur districts rank third and fourth important places of origin of migrants to Madras City in 1901 and 1911 while in 1921 percentage of migrants from Thanjavur exceeded percentage of migrants from South Arcot though the difference was not appreciable. The classification of migrants by district of origin was not adopted in 1931, 1941 and 1951 as a result of which effective comparative study of flow of population from contiguous districts is not possible.

However a detailed classification based on 1961 Census data is made in the tables presented in this volume and a brief account of salient features is outlined here.

More than a third of the residents of Madras City are migrants. 642,828 persons out of a total population of 1,729,141 were born in places other than Madras City. The percentage of migrants to total population is slightly less in 1961 compared to 1951. In 1951, there were 574, 425 migrants, out of a total population of 1,416,056. Thus the percentage of migrants to Madras City has declined from 40.5% to 37.1% during this decade. Though in both the censuses, the sex ratio indicates excess of males over females, there is a trend toward parity ratio of 1,000 which however is still difficult and far off to attain. The sex ratio among migrants of 1961 is 842 compared to 814 in 1951. This only indicates possibly a greater movement of families rather than individuals towards the city. The sex ratio among resident population however is 919.

Examining the age composition of migrants it is observed that maximum percentage of migrants belong to the age group 15—34. Nearly 78.6% of migrants belong to the age group 15—59 which can be regarded as constituting approximately the working force. 15.7% belong to the age group of 0—14 and nearly 5.7% are old people of the age above 60. But in the general population of the city, the classification of population by broad age groups is as follows :

Age group		Total population	Migrants
0—14	—	36.2	15.7
15—59	—	59.6	78.6
60+	—	4.2	5.7

The above table confirms that migration is more among working force since percentage of population in age group 15-59 is only 59.6 compared to 78·6% among migrants in the same age group.

65.8% of migrants are literates and literacy among males is 77.1% compared to 52.5% among females. The literacy among the general total population is only 59.4% and the literacy by sex is 69.6% among males and 48.2% among females. The statement below indicates that percentage of literates among migrants is higher than the corresponding percentage among non-migrant residents of the city.

	Persons	Males	Females
Migrants	65.8	77.1	52.5
Non-migrants	55.6	64.8	45.8
Total	59.4	69.6	48.2

Thus the quality of migrants assessed in terms of literacy is higher than that of residents. But for the migrants, the general literacy of the city will be lower than what it is.

The percentage of migrants who has passed matriculation and above among the literates is 22.2% with break up by sex as 26.8% among males and 14.1% among females. But the percentage among resident population is lower, the percentages being 17.8%, 23.7% and 8.8% respectively among persons, males and females. Therefore it is the higher educated persons who are attracted towards the city. Taking the higher qualified personnel it is seen that number of male migrants is higher than number of male non-migrants under matriculation or higher secondary, technical diploma not equal to degree, university degree or post graduate degree, engineering, medicine and veterinary and dairying. Among females, migrants are in excess in matriculation or higher secondary, university degree or post graduate degree and medicine. The following table indicates

the percentage of males and females among migrants and residents of city in each of the various educational standards.

	Educational Standards	Males		Females	
		Mig-rants	Resi-dents	Mig-rants	Resi-dents
1	Illiterate	22.8	35.1	47.5	54.2
2	Literates (without educational standard)	24.4	27.0	20.9	23.7
3	Primary or Junior basic	25.2	26.7	23.1	18.7
4	Matriculation or Higher Secondary	20.7	8.9	7.4	3.0
5	Technical Diploma not equal to degree	0.6	0.3	N	N
6	Non-technical Diploma not equal to degree	0.1	0.1	N	N
7	University Degree or Post-graduate degree other than Technical degree	5.3	1.5	0.9	0.3
8	Engineering	0.4	0.1	N	N
9	Medicine	0.2	0.1	0.1	N
10	Agriculture	N	N	N	N
11	Veterinary & Dairying	N	N	N	N
12	Technology	0.2	N	N	N
13	Teaching	N	0.1	0.2	N

Note : N = negligible

69.5% of population of Madras City are non-workers who have therefore to depend on 30.5%, of the working population. But among migrants the percentage of workers is much higher. 42.2% of migrants are workers and 57.8% are non-workers. Taking the male and female migrant population separately it is seen that 70.4% of males and 8.5% of females are workers. But among non-migrants, the percentage of workers both among males and females is much less. Only 40.9% of males and 5.1% of females among residents of the city are workers. Thus it is seen that male migrants who turn towards the city are mostly workers.

Among workers maximum percentage is found to be engaged in 'other services'. Trade and commerce accounts for the second largest concentration followed by manufacturing other than household industry. If total population (migrants and non-migrants) is taken into account, other services is again the most important category accounting for 36.4% of workers, but the second important category is manufacturing other than household industry and the third category of importance is trade and commerce.

The table below indicates the comparative percentage distribution of migrants and non-migrants into the various industrial categories.

Categories	Males		Females	
	Migrants	Residents	Migrants	Residents
Mining etc.	0.7	2.2	0.4	0.5
Household Industry	1.1	2.8	4.5	10.8
Manufacturing	21.2	32.0	5.2	8.0
Construction	4.3	4.5	3.5	3.1
Trade & Commerce	22.7	17.3	9.3	13.6
Transport	13.1	12.3	3.4	3.0
Other Services	36.9	28.9	73.7	61.0

In Table II migrants have been classified by place of dirth, religion and duration of residence.

More than 50% of migrants to Madras City have settled in the city during the inter-censal decade 1951-61. About 57% of migrants moved into the city during the last ten years and about 14.5% moved between 10—15 years and about 26.8% have been living in the city for over 16 years.

The sex ratio among migrants is 842 females per 1,000 males. But examining it from the point of view of duration of residence, it is seen that among those who have recently migrated, sex ratio is low while among those who have moved into the city a few years earlier sex ratio is high. Among the migrants who had just moved into the city and had not resided for more than a year, sex ratio is 806 implying thereby that possibly more people move without their family in the first instance. There is a gradual increase in sex ratio as duration of their residence increases.

Duration of residence in city	Sex ratio (females per 1000 males)
Total	842
Less than 1 year	806
1—5 years	862
6—10 years	941
11—15 years	923
16 years & over	728

The upward trend is uniform upto 10 years after which there is a slight and then a steep decline in sex ratio which is rather puzzling.

Out of 642,828 migrants to Madras City, 447,173 have migrated from within the State, 171,265 have moved into Madras City from other states of India and 16,552 have migrated from other countries. In other words, about 69.6% of migrants were born outside Madras City, but within Madras State, about 26.6% were born within the country but outside Madras State and about 2.6% were born in other countries and were residents of Madras City at the time Census enumeration. The percentage of migrants whose birth place could not be classified is 1.2.

Among those who have migrated from other districts of the State, migrants from Chingleput district are most numerous and they form about 33% of total migrants from within the State. The second important district from where people have turned towards Madras City is North Arcot, the migrants of that place accounting for 16.8%. South Arcot and Thanjavur districts have each contributed about 10% of total migrants from within the State. Migrants from all the other districts account for about 28%.

Among the states in India from which people have been attracted towards Madras City, the neighbouring states of Andhra Pradesh and Kerala together account for more than two-thirds of total migrants from other states to Madras. The share of Kerala is slightly lower than that of Andhra Pradesh, the percentages being 34.6% from Andhra Pradesh and 32.5% from Kerala State. Mysore, the other neighbouring State has contributed 12.7% of migrants from other states to Madras City. Migrants from all states other than these three account for only about 20%.

Among countries outside India, classification has been restricted to countries Nepal and Pakistan and all the other countries have been grouped together. However, Pakistan alone has contributed large number who form about 25% of total migrants from other countries. Migrants from Nepal account for about 7.0%.

The rural-urban classification of place of birth indicates that migrants to Madras City from within the state are mostly from rural areas while migrants from outside the state but from within India are mostly from urban areas. Therefore, inter-district migration is from rural to urban while inter-state migration is from urban to urban. Out of 447,173 migrants to Madras City from the various districts of Madras State, 263,872 or about 58% are from rural areas. But out of 171,265 migrants from other states of India only 47% are from rural areas of those states. Another interesting pattern of migration is that migrants from the most adjacent districts are from rural areas while migrants from interior districts are more from urban areas than rural areas; i. e., as the distance of place of birth increases from the point of attraction, in this case, Madras City, it is more the people born in urban areas who are attracted and move towards Madras. Possibly, people in those distant rural are migrants to nearest urban area. In this case, Chingleput which surrounds Madras has sent 108,061 persons from rural areas and only 41,615 persons from urban areas. The next district, North Arcot has sent 42,487 persons from rural areas and 32,774 from urban areas. South Arcot district also has sent larger number from rural than from urban. But from Thanjavur, migrants from urban exceed migrants from rural areas though the difference is not high. But in the case of all the other districts for which combined total is furnished, migrants from urban is well above the migrants from rural, the figures being 60,039 from rural and 66,514 from urban.

The rural urban pattern of migrants from other states follows the same trend, the distance being the influencing factor. Andhra Pradesh has sent more migrants from rural than from urban and this can be explained by the proximity to Madras City. But even from Kerala the migrants from rural areas exceed migrants from urban which is rather odd because in all the other cases, urban migrants exceed rural migrants. In the case of Mysore the proportion is appreciably high—5,300 from rural as against 16,529 from urban areas of Mysore State. In the case of other states also the migrants from urban areas are more than double that of migrants from rural areas.

The duration of residence of migrants does not vary very much as between migrants from various places of birth. The pattern that is recorded for total migrants is practically applicable for each place of birth. However, one or two deviations that are observed are mentioned below.

Migrants with less than one year residence in city form less than 10% of total migrants. Migrants who have resided for 1-5 years form less than 30% in all cases except the following: Thanjavur urban (31.4), other districts (37.4 and 36.6 for rural and urban respectively), Kerala (34.8 and 33.6), Mysore urban (31.3) and Nepal 45.2. Therefore, more persons have moved into city from these places than from other places during the last five years. The pattern of migrants with duration 6-10 years has been fairly uniform from all places. But in the case of migrants during the last 11-15 years, high percentage has been recorded among migrants from Pakistan. 37.5% of migrants from Pakistan have been residing in the city for 11-15 years which

coincides with influx of population at the time of partition of the country. The statement below indicates the percentage of migrants by duration of residence.

MIGRANTS FROM OUTSIDE MADRAS STATE BUT FROM WITHIN INDIA

Place of birth		Duration of residence				
		Less than one year	1-5 years	6-10 years	11-15 years	16+ years
Andhra Pradesh	R	7.9	26.0	20.1	13.9	29.5
	U	9.0	27.4	21.2	14.3	26.4
Kerala	R	9.8	34.7	21·4	13.8	19.1
	U	10.4	33.5	20.6	13.5	20.7
Mysore	R	10.1	28.5	21.1	13.8	25.3
	U	9.8	31.3	20.8	12.6	24.4
Other states	R	8.0	26.1	22.2	15.2	27.3
	U	10.2	25.0	21.2	13.8	24.9

N.B. Duration not stated has not been shown.

MIGRANTS TO MADRAS CITY FROM WITHIN MADRAS STATE

Place of birth		Less than one year	1-5 years	6-10 years	11-15 years	16+ years
Chingleput district	R	5.6	21.2	21.1	15.8	35.0
	U	7.0	20.9	20.1	17.5	32.3
North Arcot district	R	6.9	25.4	20.9	14.4	31.4
	U	75·5	26.1	21.0	14.4	29.3
South Arcot district	R	6.8	24.7	19.1	15.7	32.6
	U	7.4	25.9	19.7	14.6	30.5
Thanjavur district	R	8.0	30.6	20.1	13.8	25.6
	U	8.0	31.4	21.3	13.0	25.6
Other districts	R	11.0	37.4	21.4	12.3	17.6
	U	10.5	36.6	21.1	12.6	17.4

N.B. Duration not stated has not been shown.

The Table also indicates duration of residence by religion. The statement below indicates the percentage of migrants of each religion classified by duration of residence.

	Less than 1 year	1-5 years	6-10 years	11-15 years	16+ years
All religions	8.2	28.2	20.8	14.5	26.8
Hindu	7.8	27.9	20.8	14.6	27.4
Christian	11.2	29.6	19.4	13.7	23.7
Muslim	10.1	31.4	21.8	13.3	21.9
Others	8.4	29.4	23.8	15.1	20.9

The Table does not indicate any marked or appreciably variation in the percentage distribution of each religion be duration of residence.

In Table III, migrants are classified by age group, educational standard and duration of residence.

It is noticed that more than 75% of male migrants are literates while only about 50% of female migrants are literates. Among male migrants those who have passed primary or junior basic form the majority. The percentage of migrants among the various educational standards is as follows:—

Illiterates	22.8
Literate	24.4
Primary or Junior Basic	25.2
Matriculation	20.7

Classification by duration of residence indicates that male illiterates are more among those who migrated during the one year preceeding the day of enumeration than among those who migrated within 1—5 years or 6—10 years. Therefore it may be stated that in the past, males who were illiterate were reluctant to migrate towards the city while in recent years illiterates have been more hopeful of making a living in city. The percentage of illiterate males by duration of residence is as follows:

Duration	Percentage of illiterates
All durations	22.8
Less than one year	26.2
1— 5 years	22.6

Duration	Percentage of illiterates
6—10 years	20.0
11—15 years	21.7
16+ years	24.1

The same pattern of distribution of migrants by duration of residence is noticed among females.

Duration	Percentage of illiterates
All durations	47.5
Less than 1 year	51.0
1— 5 years	43.9
6—10 years	44.8
11—15 years	46.3
16+ years	53.7

The percentage of male migrants who are literates and who have passed primary or junior basic or matriculation is as follows :—

Duration	Literates	Primary or Junior Basic	Matriculation
All durations	24.4	25.2	20.7
Less than one year	23.1	22.9	19.6
1— 5 years	25.2	24.5	20.2
6—10 years	25.5	27.8	20.4
11—15 years	22.9	29.6	19.6
16+ years	23.6	23.2	22.8

The distribution of female migrants by educational standard is as follows :

Duration	Literates	Primary or Junior Basic	Matriculation
All durations	20.9	23.1	7.4
Less than one year	22.6	18.2	6.5
1— 5 years	21.1	24.3	9.5
6—10 years	23.1	24.9	6.3
11—15 years	19.4	26.0	7.2
16+ years	18.6	20.4	6.3

There are 79,613 male and 132,614 female illiterates among the migrants. Illiterates are more from rural areas than from urban areas. In fact even among total migrants, more people have come from rural than from urban areas. But the rural-urban difference among migrants is less than the rural-urban difference among illiterates. The statement below shows the percentage distribution of migrants and illiterates by rural and urban.

Areas	Percentage to Total Migrants		Percentage to illiterate Migrants	
	Males	Females	Males	Females
Rural	54.5	52.6	61.4	60.0
Urban	41.6	43.6	34.6	36.9
Other countries and Unclassified	3.9	3.8	4.0	3.1
	100.00	100.00	100.00	100.00

Illiterates are larger among those who migrated to Madras City from other districts within the state than among migrants to Madras City from other states but within India. Thus inter-state migrants are better educated than inter-district migrants as revealed by the following statement :—

Percentage of illiterates to total illiterates among migrants

(Born within the State but outside Madras City)

	Males	Females
Rural	66.6	64.5
Urban	33.4	35.5

(Born in other states but within India)

	Males	Females
Rural	56.1	51.1
Urban	43.9	48.9

Even if the migrants are from other districts within the state, illiterates are more from rural areas than from urban areas. The same pattern is reflected among migrants from other states. But the disparity between rural and urban is higher in the case of those born within the state than among those born outside the state. To sum up, though illiterates flow into the city in large numbers from rural areas, the share of illiterates from rural areas of other states is less than the share of illiterates from within the state.

Among the districts of Madras State from which people have migrated to Madras City, Thanjavur district has sent least number of illiterates and maximum number of educated persons especially those who have passed matriculation. Chingleput district on the other hand has sent maximum number of illiterates. The statement below indicates percentage of male migrants classified according to educational level.

Males (all durations)

Place of birth		Illiterate	Literate	Primary or junior Basic	Matriculation
All birth places		22.8	24.4	25.2	20.7
Chingleput	R	33.7	27.2	24.7	12.5
	U	28.1	25.1	25.8	17.6
North Arcot	R	26.0	26.3	27.6	16.6
	U	21.1	24.4	29.5	20.0
South Arcot	R	32.7	26·2	22.5	15.3
	U	25.8	23.1	24.6	12.7
Thanjavur	R	13.1	18.2	22.0	33.6
	U	12.2	18.5	21.6	34.3
Other districts	R	18.9	20.4	25.6	22.8
	U	15.7	22.3	25.4	25.8

The pattern of migration by birth place and educational standard among females is shown in the statement below :

Females (all durations)

Place of birth		Illiterate	Literate	Primary or junior Basic	Matriculation
All birth places		47.5	20.9	23.1	7.4
Chingleput	R	66.8	15.6	14.6	2.8
	U	57.3	18.4	19.9	4.1
North Arcot	R	59.9	18.7	17.5	3.5
	U	46.5	21.8	24.4	6.5
South Arcot	R	64·0	16.7	15.2	3.7
	U	49.9	21.2	21.3	6.6
Thanjavur	R	29.0	25.2	34.3	10.8
	U	26.4	25.9	34.5	11.5
Other districts	R	38.7	22.2	22.9	10.6
	U	35.6	22.2	29.6	10.6

As regards migrants from outside Madras State, but from within India, majority are literates. In fact more than 75% of migrants from other states of India are literate., the only exception being those from rural parts of Andhra Pradesh though even among them nearly 70% are literates. Literate migrants are more from urban areas than from rural areas of these states.

Among literate males, literates without educational standard are predominant among migrants from Andhra Pradesh rural, Mysore rural, and other states both rural and urban. Migrants from Kerala, Mysore urban who have passed primary or junior basic are more than those with other qualification. Maximum percentage of Matriculates among total migrants is from Andhra Pradesh urban. The statement below shows the distribution of male migrants from states outside Madras by educational standard.

Males (all durations)

Place of birth		Illiterate	Literate	Primary or junior Basic	Matriculation
Andhra Pradesh	R	29.6	23.8	22.8	18.1
	U	18.0	20.9	23.5	25.9
Kerala	R	16.4	26.2	27.2	23.1
	U	14.5	23.7	27.5	24.5
Mysore	R	19.2	27.1	24.7	19.5
	U	16.9	22.1	25.4	24.7
Other states	R	24.3	26.9	25.6	16.8
	U	21.0	26.2	25.8	19.8

Literacy among female migrants from outside Madras State varies between 74% among those from Kerala (urban) and 45.1% among those from Andhra Pradesh (rural). Even here urban literacy is higher than rural literacy. The pattern of literacy among female migrants is similar to that of male migrants. The percentage of female migrants by educational standard is presented in the following statement.

Females (all durations)

Place of birth		Illiterate	Literate	Primary or junior Basic	Matriculation
Andhra Pradesh	R	54.9	20.0	19.2	5.0
	U	35.4	23.8	29.1	9.7
Kerala	R	29.4	25.1	29.0	14.2
	U	26.0	24.2	30.8	15.4
Mysore	R	35.9	27.2	24.2	9.9
	U	32.4	25.9	27.4	11.8
Other states	R	47.8	25.3	20.9	5.0
	U	39·9	24.3	25.4	8.4

Taking the male migrants to Madras City from outside India it is seen that those from Nepal have the lowest literacy of 51.7% while migrants from Pakistan have 81.9% literacy. 83.0% of migrants from other countries are literates.

Taking higher education, it is seen that 17,946 male migrants out of 269,226 literate male migrants are degree hol-

ders, 1,355 males are qualified in engineering, 825 males are qualified in medicine and 526 are qualified in teaching. 8,184 male degree holders are from rural areas and 9,762 are from urban areas and 633 males are from outside India. But degree holders are more from rural areas than from urban areas among migrants from Chingleput, North Arcot and Thanjavur.

Out of 1,355 males qualified in engineering, 500 are from rural and 800 are from urban. Only among migrants from Chingleput district is the rural engineering qualified males are more than the urban migrants and in all other cases urban figures are greater than rural figures. This trend is noticeable even in the case of those qualified in medicine and teaching.

In Table IV, migrants have been classified by occupational division and group to study the type of workers who migrate towards the city. It is noticed that among males, craftsmen and production process workers belonging to divisons 7 and 8 form the largest single category. They form nearly a third of the total workers. The next category of importance is division 2—clerical workers who form a fifth of total workers. The third important category of persons is salesmen and related workers. The following table gives the percentage of male workers classified by occupational division.

Occupational Division	Percentage to total male workers	Percentage to total female workers
0. Professional, Technical and related workers	7	23
1. Administrative, Executive and Managerial workers	5	1
2. Clerical and related workers	20	7
3. Sales workers	14	7
4. Farmers, Fishermen, Hunters, Loggers and related workers	2	1
5. Miners, Quarrymen and related workers	...	...
6. Workers in Transport and Communications occupations	6	1
7&8. Craftsmen, Production process workers and Labourers not elsewhere classified	34	22
9. Service, sport and recreation workers	12	38
X. Workers not classifiable by occupation	...	...
	100	100

Among female workers the different workers in division 9—"service, sport and recreation" form the majority with 38% of total workers. Most of the female migrant workers are likely to be engaged as housekeepers, cooks, maids and related workers. The second category of importance among females is division 'O'—Professional, technical and related workers which covers teachers, nurses, musicians etc. considerably dominated by women. The third category of importance is divisions 7 and 8 craftsmen—belonging to spinning, weaving, knitting, construction workers and basket weavers.

Examining the pattern among the various places of birth from which migrants have moved into Madras City, it is seen that among males, those engaged in divisions 7 and 8 form the majority among those from Chingleput, North Arcot, South Arcot, Andhra — rural, Mysore — urban, other state—rural and other countries. The districts and states which do not follow this pattern are Thanjavur, other districts, Andhra—urban, Kerala, Mysore—rural, Pakistan and Nepal. Male migrants belonging to division 2—clerical and related workers form the majority among male migrant workers from Thanjavur district.

Similarly among migrants from other districts percentage of workers engaged in division 2 is higher than those engaged in other divisions. The same pattern is noticed among migrants from Andhra—urban, Mysore—urban and other states—rural. In the case of migrants from urban areas of other states and Pakistan, those engaged as sales workers form the majority while in the case of migrants from Nepal, those under division 9 form a very high percentage. Possibly this is due to a large number of Gurkhas engaged as watchmen by several firms and institutions.

Division 'O' - Professional, technical and related workers form more than 10% of total workers among migrants from the following places: Thanjavur (rural and urban), other districts (urban), Andhra (urban), Mysore (rural and urban) and other states (urban). Division 1-Administrative and executive and managerial workers form more than 10% in only four cases, Kerala—urban, Mysore—rural, other states—urban and Pakistan. In division 2- migrants form more than 10% in all cases except Nepal, where only 3% of workers belong to division 2. In division 3 also, in all but five birth places, the percentage is above 10% of total workers. In division 4 on the other hand, the percentage is less than 5% and the highest is only 7% in South Arcot urban. Workers in mining and quarrying are conspicuously absent among the migrants while the percentage among total workers of the city is 1.3. Only two places - South Arcot rural and other countries have 10% of its migrants engaged in division 6. Divisions 7 and 8 are important for all birth places except - Pakistan and Nepal since only 5% of the migrant workers from Pakistan and 1% of migrant workers from Nepal are engaged as craftsmen and production process workers.

More female migrants are engaged as professional and technical workers than male migrants. While among males only 7% of migrant workers are engaged as professional and technical workers, nearly a fourth of total female migranst

belong to this group. The percentage ranges above 40 in the case of migrants from Thanjavur—urban, other districts-urban, Kerala—urban, Mysore—urban, Pakistan and other countries. In division 1, the female migrant workers form only 1% while male workers form 5%. In division 9 also there are more female workers than male workers. Among male migrant workers only 12% belong to division 9 while among females 38% are engaged in this division—9-service, sport and recreation workers. In all other divisions, the percentage of male workers is higher than the percentage of female workers.

Examining the percentage of migrants of each division by place of birth it is seen that while male migrants belonging to most of occupational divisions are from different places of birth, male migrants belonging to division 5 miners, quarrymen etc. are from only four places—Chingleput urban, South Arcot rural, Thanjavur rural and Andhra rural. In divisions 0, 1, 2 and 3 maximum percentage of male migrants is from other districts but among workers in division 5, highest percentage is 33 from Chingleput rural. In divisions 6, 7 and 8 also migrants from Chingleput rural form the highest percentage to total male migrants. Migrants from Kerala—rural who form 14% of total male migrants constitute the highest percentage.

Among females, migrants from other districts form the majority in divisions 0, 1, 2 and 6. Among migrants belonging to divisions 3 and 4, migrants from Chingleput (rural) form the majority. In the case of those belonging to divisions 7 and 8 also, a majority have migrated from Chingleput district.

The ranking of birth places (rural) according to percentage of male workers of each occupational division is made in the following tables.

PERCENTAGE OF MALE WORKERS IN RURAL AREAS TO TOTAL WORKERS IN EACH OCCUPATIONAL DIVISION

In Table V, migrants have been classified by industrial divisions and major group. It is seen that workers in other services form 38% of total workers and workers in trade and commerce rank second with 22% followed by workers in manufacturing industries where they form 20% of total workers. Among male workers it is noticed that a large percentage (38%) are engaged in other services and workers in division 6 trade and commerce rank second and workers in manufacturing rank third. But among females, there is a heavy concentration of workers in other services. Nearly hree fourths of total female workers are engaged in other ervices. Ten per cent of female workers are engaged in trade and commerce. Female workers in manufacturing form only % of total workers.

This pattern of distribution of workers by industrial division is noticed in almost all places of birth according to which migrants have been classified. Workers in other services form a majority in all cases except among workers who have migrated from 'other states' and Pakistan. In the case of migrants from 'other states' (states other than Andhra Pradesh, Kerala and Mysore) only 22% of workers are engaged in other services. Majority of workers from 'other states' are engaged in trade and commerce. Among migrants from rural areas of 'other states' 40% of workers belong to trade and commerce while in case of migrants from urban areas of 'other states' 69% belong to trade and commerce. But this pattern is more due to male workers than due to female workers. Among females, majority belong to other services thus following the general pattern. But among males the percentage of workers in other services is only, 20% in the case of 'other states' rural, 18% in the fcase of 'other states' urban and only 8% among migrants rom Pakistan.

The following table shows the percentage distribution of total workers among the various industrial divisions.

XVI

PERCENTAGE DISTRIBUTION OF WORKERS BY INDUSTRIAL DIVISION

(PERSONS)

Place of birth	Rural Urban	Industrial Division									
		0	1	2 & 3	4	5	6	7	8	9	Total

The distribution of migrants of each division by place of birth indicates that maximum percentage of workers have migrated to Madras City from Chingleput district. Migrants from Chingleput district form the largest percentage in all the division.

In division 0, the migrants from Chingleput form 44% composed of 36% from rural and 8% from urban areas. The second important place, migrants of which form a sizable percentage among workers in division 0, is other states. The following table indicates the percentage of total workers of division 0 classified by place of birth

DIVISION 0

In Table VI, migrants have been classified by place of birth, age-group and marital status. Majority of migrants to Madras City are married. Among male migrants 57% are married and among females 62% are married. 37% of male migrants and 25% of female migrants are unmarried. Only 6% of males and 13% of females belong to the category divorced, separated or widowed.

Married males form more than 60% among migrants from the following places-Chingleput (rural and urban), North Arcot (Rural), South Arcot (rural and urban), Nepal and other countries. The highest percentage of married male migrants is among those from Nepal. Among females married persons form more than 60% in 16 out of 22 birth places. They form less than 60% in the case of migrants from Thanjavur (rural and urban) other districts (urban), Andhra (urban), Mysore (urban) other states (urban). The percentage of married males and females to total is shown in the following statement.

Place of birth		Percentage of Married among	
		Males	Females

TABLE 1

Migrants classified by Sex, Broad Age group,
Educational Standards and by Category of Workers / Non-Workers

TABLE 1

Fly Leaf

This table is similar to Table B-III-A of Part II-B, but is limited to migrants to Madras City. It presents the number of migrants classified by broad age groups and educational standards in each category of workers and non-workers. The migrants to Madras City have been classified into workers and non-workers and workers have been classified into nine categories as follows :

1. Cultivators
2. Agricultural labourer
3. Workers in mining, quarrying, livestock, forestry, fishing and hunting and other allied activities
4. Workers at household industry
5. Workers in manufacturing other than household industry
6. Workers in construction
7. Workers in trade and commerce
8. Workers in transport, storage and communications
9. Workers in other services

Under each of these categories, migrants have been shown by broad age group—0-14, 15-34, 35-59, 60+ with separate figures for age not stated.

Educational standards have been classified into seven broad categories: Literate without educational standard, primary or junior basic, matriculation or higher secondary, technical diploma not equal to degree, university degree or post graduate degree other than technical degree, technical degree or diploma equal to degree or post graduate degree. The last category has further been divided into Engineering, Medicine, Agriculture, Veterinary or Dairying, Technology, Teaching and others.

This table furnishes data for Madras city and separately for each of the four zones into which Madras city has been divided. The divisions comprising each zone have been indicated in the preliminary note.

TABLE 2

Migrants classified by sex, religion, birth place and duration of residence

TABLE 2

Fly Leaf

In this table the migrants to Madras City have been classified by the place of birth, duration of residence and religion Migrants have been broadly classified into three categories :

1) Persons born within the State of enumeration

2) Persons born in States in India outside the State of enumeration

3) Persons born outside India

Under the first category persons born in four districts have been shown separately and other districts have been grouped under " Other districts. " The four districts are : 1. Chingleput 2. North Arcot 3. South Arcot and 4. Thanjavur.

As regards persons born in Other States, migrants from Andhra Pradesh, Kerala and Mysore have been shown separately and all the other States have been grouped under 'Other States.'

In the case of migrants from outside India, persons born in Nepal and Pakistan alone have been shown separately and other countries have been grouped.

Separate figures have been shown under " **birth place** " unclassifiable.

Rural urban classification has been adopted for migrants coming under the first two categories viz., (1) born outside the district of enumeration but within the State (2) Born in other States within India.

Figures for each of the above mentioned categories have been classified by duration of residence which has been grouped as follows :

Less than 1 year
1—5 years
6—10 ,,
11—15 ,,
16 + ,,

All the above particulars have been shown separately for Hindus, Christians, Muslims and Others.

As in the case of Table 1, separate figures for each Zone have been furnished with a consolidated total for Madras City.

TABLE - 2 — MIGRANTS CLASSIFIED BY SEX, RELIGION,

MADRAS

TABLE 3

Migrants classified by Sex, Duration of Residence, Age Group and Educational Standard

TABLE 3

Fly Leaf

This table classifies migrants by age groups and educational standards. The eight age groups that have been adopted are: 0-14; 15-19; 20-24; 25-29; 30-34; 35-59; 60 + and age not stated. Illiterates have been shown separately and literates have been classified as follows:—

Literate without educational standard

Primary or Junior Basic

Matriculation or higher secondary

Technical diploma not equal to degree

Non-Technical diploma not equal to degree

University degree or post-graduate degree other than technical degree

Technical degree or diploma equal to degree or post-graduate degree

The last category has been further classified into Engineering, Medicine, Agriculture, Veterinary and dairying, Technology, Teaching and Others.

The above information has been presented separately for each of the five durations of residence into which migrants have been classified. The figures under "All Durations" includes figure under "Period Not Stated" which has not been shown separately.

Figures for rural and urban have been shown separately for all the nine birth place within India.

TABLE 4

Migrants classified by sex, duration of residence, age group, occupational division and group

TABLE 4

Fly Leaf

This table is intended to throw light on the occupational characteristic of migrants to Madras City.

In this table, migrants to Madras City have been classified by place of birth, age, sex, duration of residence, occupational divisions and selected occupational groups. The occupational divisions and groups are based on the National Classification of occupations. The details of the occupational divisions and groups have been indicated separately.

The duration of residence has been classified in to five categories as follows: Less than one year, 1—5 years, 6—10 years, 11—15 years and 16 and over years. The category 'duration of residence not stated' has not been shown separately but the total under all durations include figures of 'period not stated'.

TABLE - 4 — MIGRANTS CLASSIFIED BY SEX, DURATION OF

MADRAS

TABLE-5

Migrants classified by sex, age group, industrial division and major group and class of worker

TABLE - 5

Fly Leaf

In Table - 5 migrants to Madras City have been classified by age, sex and industrial divisions and selected major groups. The table has been divided into two parts, the first part relating to workers at household industry and the second part relating to workers in non-household industry. The workers have also been classified by class of worker viz., employer, employee, single worker and family worker.

TABLE-6

Migrants classified by sex, duration of residence age group and marital status

TABLE - VI

Fly Leaf

In Table VI, migrants have been classified by place of birth, duration of residence, age-group, and marital status.

Seven age groups :— 0—14, 15—19, 20—24, 25—29, 30—34, 35—59 and 60 + have been adopted and migrants have been classified into never married, married, widowed, divorced or separated.
