FOREWORD

The present Paper is a continuation of Paper 1 of 1981 in which the Provisional Population totals for the State of West Bengal obtaining in 1981 Census were published last March. This one is being called Paper 1 of 1981 — Supplement. It must be emphasized here that the data in this Paper are also very much provisional in nature as in our earlier Paper. In Paper 1 we dealt with the distribution of population, sex ratio, growth rate and density of population by districts ; decadal variation in population since 1901 by districts ; literate population in 1981 and percentage of literates to total population in 1971 and 1981 by districts; and finally, population in 1981 divided between males and females, sex ratio, total number of literates, number of male literates and female literates and literacy rates for each sex for the cities and urban agglomerations with a population of 100,000 and above. The present Paper will Supplement those data in two main ways. It deals with the latest position in respect of urban growth as well as urbanisation in this State ; it also reveals the population of workers and further sub-divides the latter into four major groups while comparing them with those of 1971. All these data have been presented in the form of four main Tables. Further, it furnishes Primary Census Abstract Part I and Part II with break-ups upto districts, police stations, towns and urban agglomeration levels. And finally, we have also added a Table depicting the number of disabled persons by types of disability. The questions on disabled persons were canvassed at the time of Houselisting which took place in this State between August to early October 1980. These data, though not directly connected with the main theme of this Paper, have still been incorporated as this matter aroused a lot of popular interest and yet this will find a place only in our subsequent tabulation of H-series which will be penultimate tabulation series and is a long way off from the present.

A visual presentation of some of the data has been presented in the form of maps and charts. It is hoped that the maps — specially those for Calcutta Urban Agglomeration 1981 and the towns of 1981 —would be of interest to the readers.

The data obtained out of the Census Operation — it should be re-emphasized — are the result of a team effort. This is already known and while dealing with and analysing such data it is our duty to recall with greatfulness the contribution made by about 1.25 lac of Census Enumerators, Supervisors and Charge Officers, all taken together. This also presents an opportunity to reiterate that the excellent initiative and leadership given by the District Magistrates / Deputy Commissioners at district level and their teams, the immense help so kindly accorded by the State Govt. and the extra-ordinary trouble taken by the Registrar General of India to make the Census of 1981 a going proposition are some of the factors that are almost solely responsible for the success of Census in this State and we greatfully acknowledge their respective contributions once again. The point which needs special mention is that the analysis of the data presented here is also the result of a team effort, the team now being comprised of the concerned Officers and Officials in our Directorate. Special mention may be made of Sarbashri M. N. Sarkar, D. P. Chatterjee, Asstt. Directors and Swapan Kumar Guha, Investigator who worked tirelessly for preparation of this volume, as well as Sarbashri S. Sinha, Joint Director and Dr. K. S. Dey, Deputy Director who examined the draft minutely and critically and suggested many improvements. The mapping personnel in our Map Unit took great pains to prepare the maps, charts etc., and our Printing Section also did a commendable job in having this Paper printed so well. While the credit, if any, must go to all of them, I am alone responsible for all the short-comings. And finally, the views to be found in the analysis do not reflect the official version, but are my own and to that extent must be taken merely as a generalist's amateurish attempt to deal with a subject that should normally be an exclusive preserve of the experts.

ANALYSIS OF RESULTS

URBAN POPULATION AND URBANISATION

I

The Supplementary Tables presented in this paper cover two areas, one of which was covered only partially in Paper I while the other remained untouched. The first category of Tables presented here are meant to show the rate of urbanisation as well as the rate of urban growth. In Paper I this matter had been dealt with in a very limited way by rendering the provisional population figures—alongwith literacy figures—of those cities and urban agglomerations that were found to have a population of 100,000 and above. In the present Paper, Table I gives the rural and urban composition of population for the State as well as for each district of the State, showing simultaneously the percentage of urban to total population and the decennial growth rate of each of the districts. Table II deals extensively with the population growth rate of all cities, urban agglomeration and towns in West Bengal, showing side by side the decennial growth rate of each one of them. The second category of Tables refers to distribution of main workers in the State and in each district, dividing them between males and females and showing against each district the percentage of such main workers to total population. The next Table distributes the main workers in the State as well as in each of the districts by four broad categories of main workers *viz.* cultivator, agricultural labourer, household industry workers and other workers. This Table also gives the percentage of main workers in each of these divisions for 1971 and 1981. In the analytic note that follows, Table I and Table II will be grouped together while Table III and Table IV will be considered as constituents of another group.

II

The Tables on urban population in West Bengal should be viewed against the all-India picture to set the one in West Bengal in proper perspective. As per provisional figures, the urban population as a percentage of total population of India records a figure of 23.73%. It is however, in exclusion of State figures for Assam and Jammu & Kashmir. The performance of India as a whole in the previous decades in this respect were of the following order :

1951	17.29%
1961	17.97%
1971	19.91%

Thus it would appear that the decade 1971 to 1981 has been characterized by a markedly quicker tempo of urbanisation in India than in earlier decades, though the figure of 23.73% as a percentage of urban population to total population does not really indicate a phenomenally big urban population. Actually, judged by this concept, India would still appear to be a country having an overwhelmingly rural population. Yet 23.73% does mark a relatively good performance and the contrast with the performance in this respect in previous decades is indeed quite sharp. Needless to say, when the respective figures of Jammu & Kashmir and Assam would be available, the all-India figure would be higher than what we now find.

As against this all-India background, the growth rate of urban population in the State of West Bengal has been slightly better without being exactly impressive. The growth rates in this respect in West Bengal have consistently been of an order higher than the all-India rates from 1951 onwards. Statement 1 describes the performance of West Bengal from 1951 onwards.

STATEMENT 1

Showing percentage of urban population to total population of the State of West Bengal from 1951 to 1981.

Year	Percentage of urban population to total population
1951	23.88
1961	24.45
1971	24.75
1981	26.49*

A closer study of these figures will show that increase of this rate over decades to the extent of 0.57% or 0.30% is really nothing substantial. On the other hand, the increase of 1.74% from 1971 to 1981 does look like a substantial gain. The 1981 figure of 26.49%, once again, is not really indicative of a phenomenal growth rate in urban population, but undoubtedly point out a sizeable growth that would also be supported by other indications as we analyse the 1981 Census results further.

It would be interesting to note that the increase in urban population in West Bengal in absolute number during the last decade has been quite appreciable. From 10.9 *million* (approx.) in 1971, urban population in this State has increased in absolute terms to 14.4 *million* (approx.) in 1981. Increase in absolute terms of 3.47 *million* (approx.) in urban population in a State of a relatively small size like West Bengal over a single decade is a significant event. In the all-India background of an absolute increase of approximately 47.07 *million* from the decade 1971 to 1981, (without counting J. & K. and Assam) the absolute incremental figure for West Bengal constitute 7.37% of the all-India ingredient.

The 1981 Census puts West Bengal to the 11th rank taking into consideration all the States and Union Territories of India excluding Assam and Jammu & Kashmir. Ahead of West Bengal are Chandigarh (93.60%), Delhi (92.84%), Pondicherry (52.32%), Lakshadweep (46.31%), Maharashtra (35.03%), Tamil Nadu (32.98%), Goa, Daman & Diu (32.46%), Gujarat (31.08%), Karnataka (28.92%) and Punjab (27.72%). Thus it would appear that while West Bengal continues to show a higher rate of growth of urban population than the all-India one,—the latter being tentative—urbanisation as well as urban growth elsewhere in India taking place faster thereby pushing up the all-India rate of growth of urban population and narrowing the gap between the latter and that of West Bengal.

Let us, in this connection, also consider the decennial growth rate of urban population. The all-India decennial growth rate of urban population from 1951 to 1981 *vis-a-vis* that in West Bengal for this period can be seen from the Statement 2.

Note :

*Calculated on the basis of 1981 Census Provisional Population Totals.

STATEMENT 2

Decade	Decadal growth rate of Urban Population (in percentage)	
	India	West Bengal
1	2	3
1941-51	+ 41.42	+ 32.52
1951-61	+ 26·41	+ 35.97
1961-71	+ 38.23	+ 28.41
1971-81	+ 43.14	+ 31.61

A study of these figures would show that the decadal growth rate of urban population in West Bengal has except for 1961 been of a lower order than the all-India growth for the same. The trends discernible from these two Statements thus show that in West Bengal, our urban population as a percentage of total population of the State, is on high side when compared with the all-India average for the same ; but the rate of growth of urban population in the State is smaller than the all-India rate. These are perhaps related to the historical facts of (a) West Bengal's—the then Bengal's—obtaining a big start over most other regions of India in early this century in urbanisation *via* industrialisation etc. and (b) the catching up of a large number of States with West Bengal in urbanisation latter, when conscious planning started. But such matters are, strictly speaking, outside the scope of the present paper. Let us go back to the provisional findings of 1981 Census, given in the Tables.

III

Table I has sub-divided the entire State of West Bengal into its constituent districts and considered the rate of growth of urban population in each district. A consideration of this Table would show that when judged by the standard of percentage of urban to total population the city of Calcutta—as it should be—occupies the first position with 100% of its population being marked as urban. This was so in 1971 also and there is nothing spectacular about it any more. In this respect, the least urbanised district is Maldah which in 1981 has 4.78% as the percentage figure of urban to total population. This figure for Maldah in 1971 was 4.22%. Thus Maldah continues to be the least urbanised district both in 1971 and in 1981.

While the city of Calcutta may be kept out of consideration for the moment for the simple fact that the entire Calcutta district in the Census terminology consists of urban areas only, it would be found that the next most urbanised district both in 1971 and 1981 was Haora. This district had 41.93% and 45.22% respectively as the percentage of urban to total population in 1971 and 1981. This stands to reason, for Haora with its industrial establishments is generally believed to be a highly urbanised area—at least that part of it which is contiguous to the city of Calcutta. Next in rank was and still is the district of Twentyfour Parganas with 35.15% in 1971 and 38.90% in 1981 of urban to total population. In 1971 Hugli occupied the place next to Twentyfour Parganas with 26.47%, which has this time registered a figure of 29.54%. The districts of Darjiling and Barddhaman have inter-changed their positions; while Darjiling in 1971 was next to the district of Hugli in ranking with a figure of 23.05%, the district of Barddhaman was next to Darjiling with 22.78% in

that year. In 1981, the district of Barddhaman has not only surpassed the figure of Darjiling but also has slightly forged ahead of the district of Hugli registering a figure of 29.65% in 1981. The same for Darjiling this time is 27.86%. If we now try to regionalize the growth of urban population, we shall find that urban population as a percentage of total population has grown significantly in the districts of Calcutta, Twentyfour Parganas, Haora, Hugli and Barddhaman. These districts form the core of urbanisation-*cum*-urban growth in South Bengal. With a considerable industrial base, they were already credited with a sizeable urban population in 1971. They now may be said to have consolidated their positions. The western part of West Bengal consisting roughly of the districts of Puruliya, Bankura, part of Medinipur and Birbhum have improved just about marginally. These districts have that kind of geophysical features which would normally cause economic backwardness unless conscious man-made efforts induce growth. Such man-made efforts are scarce in a country like India and certainly scarcer in these relatively barren corners of the State. Since even agriculture is also not exactly flourishing there, it stands to reason that urbanisation would also be at a low key. The rest of the two districts in South Bengal, namely Murshidabad and Nadia, (which are quite fertile and agriculturally prosperous as a typical part of the lower Gangetic plains) have maintained their individual rates of growth of urban population with Nadia obviously registering a somewhat sharper increase than Murshidabad. Such increase in Nadia is partly due to the fact that at the southernmost end of that district two urban units, namely Kalyani Notified Area and Gayeshpur Notified Area both of which have fallen within Calcutta Urban Agglomeration, have shown very high rates of growth (109.07% and 93.69% respectively). Secondly the 1981 Census Operations resulted in identification of 4 new towns in Nadia and as many as 7 outgrowths, with the new towns accounting for a sizeable net urban population. (Gadigachha 10,827 ; Aistala 18,992 ; Madanpur 7,895 ; Haringhata 6,486).

In that chunk normally known as North Bengal, the rate of growth of urbanisation—as indicated by the indication of percentage of urban to total population— has been of normal order by and large, with Darjiling district and Jalpaiguri district showing a relatively sharp increase in urbanisation. The figure of Jalpaiguri of 1971 was 9.60% which increased to 14.08% in 1981. This is a somewhat big jump. Similarly the decennial growth rate for the district of Jalpaiguri shows 84.94% increase in urban population. This sharp increase in decennial growth rate of urban population in this district as well as increase in the percentage of urban population is explained by the fact that in 1981, four new towns —all Non-municipal and two outgrowths—which have come up in the district have contributed tremendously towards the urban population. The Non-municipal town of Dabgram alone has contributed 76,210 persons, while three other new towns, *i.e.*, Uttar Latabari 8,661, Odlabari 6,889 and Gairkata 5,903 have done their bit also. In the background of a predominantly rural district like Jalpaiguri, the emergence of these four new towns and two outgrowths contributed nearly a net addition of 100,000 of population in the urban sector has naturally inflated the percentage figures accordingly. This, however, does not necessarily mean that the district of Jalpaiguri has, all on a sudden, become highly urbanised. It, on the other hand, goes to show that the emergence of some new towns coupled with a fairly high rate of growth of already existing urban areas have given the district of Jalpaiguri a somewhat more urbanised look in pockets than it had before.

The relative sharp rise in the case of Darjiling has apparently been caused by emergence of 3 new towns for the first time in 1981. These 3 new towns respectively are Cart Road (11,042 population), Uttar Bagdogra (8,709 population) and Jaldhaka Hydel Power Project Town (3,384 population). These 3 new towns taken together thus accounted for 23,135 population—all urban—in the district. Further the town of Siliguri has grown at a very high rate, the rate of growth from 1971 to 1981 has been of the order of 57.80%, resulting in a total population of 153,825 in Siliguri Municipality itself.

The other three districts of North Bengal, have maintained a more or less normal rate of growth as can be expected of a predominantly agricultural area. Even among them, however, the district of West Dinajpur is slightly way ahead of the districts of Maldah and Koch Bihar.

IV

It would be worthwhile to quantify the extent of urbanisation in west Bengal during the period 1971-81. Before that, we should explain what are urban units in Census terminology. By urban units what is meant is either (a) of municipalities and such other bodies of equivalent status (like Notified Areas, Cantonments, etc.) which have been created by a definite legislation as urban areas or (b) such areas which are urban as per Census definition. In order to be considered as an urban unit, as per Census definition, a specific geographical area (like a *Mouza*) must fulfil the following three conditions simultaneously.

(1) a population of at least 5,000
(2) a density of population of at least 400 per sq. km. and
(3) at least 75 percent of the male working persons in that area must be engaged in non-agricultural pursuits (except those in livestock, forestry, hunting, fishing, plantation, game propagation etc.)

Fulfilment of these three conditions simultaneously would make, as per Census definition, a particular geographical area, an urban unit and normally is called a Non-municipal town. There is, however, one exception to this rule. If a specific area has developed into a town due to existence of some Project or because of being a health resort or a place of tourist attraction (meaning thereby Projects of some sort or other being undertaken in such a place by either Government or private sector) such an area can be given the status of an urban area even without strictly fulfilling all the above three conditions specifically the condition of there being a minimum population of 5,000. Further, for the first time in 1981 Census, the concept of urban outgrowth has been introduced in West Bengal. The definition of urban outgrowth is almost similar to the earlier definition of Project town, insofar as an area, in order to be an urban outgrowth should fulfil at least the second and the third conditions of an urban unit necessarily but shall by definition fall short of the population figure of 5,000. But an urban outgrowth must be physically contiguous to any one of the urban areas as defined above and should have a minium of 600 population or so. Thus an urban outgrowth has been kept necessarily tagged to a "mother town". On the other hand, Project towns may stand on their own—qualifying as urban units by themselves. In a way, an urban outgrowth is a quasi-urban area and so may be a Project Town. (Quasi-urban areas are those urban units that have less than 20,000 population).

STATEMENT 3

Growth Rate of Urban Population

for the decades, 1941-51, 1951-61, 1961-71 & 1971-81 : West Bengal

Census year	Total population	Total Urban population including that of New Towns & OGs.	No. of New Towns & OGs.	Urban populations of New Towns & OGs.	Urban populations excluding that of New Towns & OGs.	Decadal growth rate of Urban populations including that of New Towns & OGs.	Decadal growth rate of Urban populations excluding that of New Towns & OGs.	Percentage of Urban populations including that of New Towns & OGs. to total populations	Percentage of Urben populations of New Towns & OGs, to Total populations
1	2	3	4	5	6	7	8	9	10
1941	23,229,552	4,740,222	..	..	..	+63.69	..	20.41	..
1951	26,299,980	6,281,642	17	192,852	6,088,790	+32.52	..	23.88	0.73
1961	34,926,279	8,540,842	68	788,700	7,752,142	+35.97	+27.32	24.45	2.26
1971	44,312,011	10,967,033	43	360,161	10,606,872	+28.41	+36.83	24.75	0.81
1981	54,485,560	14,433,486	78 Towns 79 OGs	923,630	13,509,856	+31.61	+27.37	26.49	1.70

Statement 3 will show the extent of urbanisation in this State from 1971 to 1981. The number of new urban units has increased considerably over this period in each decade. In 1981, we have 78 new towns and 79 outgrowths. This is the first time, the concept of outgrowth has actually been put to use in West Bengal, (though in the rest of India, outgrowths had been identified from 1971 with a continuation this time). This is a somewhat sudden jump from 43 new towns of 1971. Again, in 1971, the urban population of those 43 new towns only was 360,161. As against that the urban population of 78 new towns and 79 outgrowths taken together, has come to 923,630. The percentage of urban population (including all new urban units) to total population was 24.75 in 1971 ; the same in 1981 is 26.49. And finally, the percentage of urban population of new urban units only, to total population was 0.81 in 1971, while the same has increased to 1.70 in 1981. The last item may be taken as a quantified indication of the extent of urbanisation. Thus viewed, from 1951 till date, the highest point of urbanisation was reached in 1961, when the percentage of urban population of new urban units to total population went as high as 2.26. Notwithstanding that, however, it can still be asserted that the extent of urbanisation in this State from then on has been on normal order, almost verging on above average—specially in 1981. Had the concept of outgrowth been applied in 1971, the sudden dip in the figure from 2.26 in 1961 to 0.81 in 1971, would certainly have been much less sharp.

At this stage, one clarification about population figures in the outgrowths, is due. At this moment, when we are still in the midst of initial sifting of the Census data, we are not in a position to calculate separately the exact 1981 population of each outgrowth. They are still merged with the population figures of their respective mother towns. So, for the purpose of Statement 3, the population of the outgrowths have been approximated by reaching back to their 1971 population and then applying an weighted average growth-rate on to that. This will not give the exact population figure naturally. But that is all that can be done at this stage.

Because the position is rather unsatisfactory and will remain so till the individual population of each outgrowth can be separately extracted, Another Statement is given at next page in an effort to present a comprehensive comparative picture. All the urban units that have outgrowths have been listed in the Statement and the outgrowth(s) pertaining to each mother town shown against the latter. The 1971 population of the mother town and that of the outgrowth—which obviously was a rural area at that time—have been furnished first separately and then together. And then the joint population figure has been compared with that of 1981, yielding (a) the decadal growth rate of the mother town including the outgrowth(s) and (b) the decadal growth rate of the mother town without the rural population of the outgrowth(s) of 1971. The growth figure recorded in Table II is the same as the latter. Obviously, had the concept of outgrowth been applied in 1971 and had the same areas been identified as outgrowths, the composite decadal growth rates had been of an order lower than what has now been found. Obviously, when the population of the outgrowths would be separated from their respective mother towns, the growth rate of each of such town—devoid of the outgrowths—would be lower than that given in Table II.

There is one interesting sidelight about outgrowths. The latter are quasi-urban units of a very low order and are meant to cover that twilight zone of urbanisation where an urban area theoretically or legally ends, but practically the adjacent area beyond that boundary has already started urbanising itself. That way, the normal expectation is that such urbanisation effect would be felt in areas adjacent to well established towns. But actually it is found that not only effective urban units have outgrowths, but many quasi-urban units —many of whom are Non-municipal towns—have outgrowths, too. One can identify as many as 38 urban units of quasi-urban group having outgrowths. Of them again, as many as 7 have more than one outgrowth. All this indicates that even the smaller urban units are quite capable of exerting forces of urbanisation.

The underlined town shave been created for the first time in 1981

M = Municipality

NM = Non-Municipal town

NA = Notified Area

OG = Outgrowth

V

Table II will also show that urban agglomeration in West Bengal has marked a somewhat sharp increase. The concept of urban agglomeration is not altogether new. Introduced for the first time in 1971 Census, in replacement of the earlier concept of town group, an urban agglomeration means a stretch of urban area covering more than one Municipality/town/urban outgrowth within a geographically contiguous urban continuum. An urban agglomeration shows how a particular area has had geographically continuous urbanisation. While in 1971 Census only 13 urban agglomerations were found involving a total of 97 urban units, 1981 Census Operation has led to finding of 32 urban agglomerations involving 272 constituents. [In this respect, I regret an earlier mistake in mentioning in Paper I that there were only 11 Urban Agglomerations in West Bengal in 1971. Actually there were 13]. The geographical distribution of these urban agglomerations clearly confirms the earlier geographical patterns already set in. That portion of West Bengal which is usually known as South Bengal and lies to the south of the Ganges, has experienced a greater degree of urbanisation than that portion which is called North Bengal and lies north of the Ganges. Within the South Bengal region once again, the main centre of urbanisation remains, as usual, the city of Calcutta. Calcutta, it would appear, has been raditating the force of urbanisation; further way off places from Calcutta—at least in South Bengal—have shown less and less tendency of urbanisation. The only exception to this rule has been provided by Asansol/Raniganj area of Barddhaman district where the speed of urbanisation has been quite remarkable. In fact, a further district-wise analysis of Table II as given below in Statements 5 and 6, would go to confirm the idea that in the entire State of West Bengal the two most important centres of urbanisation are Calcutta with its adjoining areas, Asansol/Raniganj area in Barddhaman district and Siliguri and its adjoining areas in North Bengal. In all the rest of the places, increase in the number of urban units has been nominal with practically no increase at all in districts like Koch Bihar. It can be found out from the Statement 5 and 6 that the emergence of new urban units have taken place almost entirely in district of Barddhaman and Twentyfour Parganas. The contribution of other districts in this respect is nothing but nominal.

	Total	**193**	**60**	**79**

While still on the subject, let us give a slightly more detailed comparison between the urban agglomerations of 1971 and those of 1981. As already stated, in 1971, West Bengal had 13 Urban agglomerations ; they were : Calcutta (I), Asansol (I), Barasat (II), Habra (II), English Bazar (II), Budge Budge (II), Koch Bihar (II), Baharampur (II), Alipur Duar (II), Kulti (III) Bauria (III), Uluberia (III) and Krishnapur (III). Of them, 5 agglomerations lost their identities in 1981. They are : Krishnapur, Barasat, Budge Budge, Uluberia and Bauria. All of them, this time, got merged in Calcutta Urban Agglomeration. Of the 32 urban agglomerations of 1981, the following is the class-wise distribution : Class I-9, Class II-10, Class III-7, Class IV-6. The names of these Urban Agglomerations and to which class they belong can be had from Statement 5. From the point of view of increase in number in each class, the increase in Class I of Urban Agglomerations from 2 to 9 and the coming into existence of 6 Agglomerations in class IV where none existed in 1971 are noteworthy.

In Table II, while giving the details of all urban units in West Bengal, the data have been presented Urban Agglomeration wise. In other words, all the urban units—including out-growths—falling within a particular Agglomeration, have been put together, irrespective of the size-class in which they would have fallen individually, had their respective population-contents been the sole factor of judging their classes. This mode of presentation has an implication ; it means that the urban units falling within an Urban Agglomeration would be deemed to belong to that size-class to which that particular Agglomeration belongs. Though this is an accepted method of presenting such data in Census, I have attempted later a size-class analysis of the urban units in this State, going by purely the criterion of individual population figure of each urban unit obtained from 1981 Census. This analysis, presented in the next chapter, attempts to show how, devoid of their association with agglomerations, the urban units have changed their classes and what such changes may probably indicate.

VI

In India, urban areas are traditionally graded into six classes by Census according to their respective population figures. These six classes are :

Class	I	(with population 100,000 and above)
Class	II	(with population between 50,000 and 99,999)
Class	III	(with population between 20,000 and 49,999)
Class	IV	(with population between 10,000 and 19,999)
Class	V	(with population between 5,000 and 9,999)
Class	VI	(with population below 5,000)

Statement 7 given at next page would show how the urban units of different classes have changed in number over the decade 1971-81, how the population in each class of urban units has increased over the same period and what kind of percent variation has the latter produced. In dealing with the contents of this Statement, we should perhaps leave out class VI urban units from our consideration for the moment, since the increase in the number of this class of urban units in 1981 is somewhat fortuitous.

STATEMENT 7

Distribution of Urban population of 1971 and 1981 Censuses according to size-class of Towns and Percentage of Population of each size-class to total Urban population

Size-Class of Towns	Number of Towns (Disregarding U.As)		Population		Percentage of total Urban Population		Decadal variation in percentage 1971-81
	1971	1981	1971	1981	1971	1981	
1	2	3	4	5	6	7	8
Class I	15	24	6 021,965	8,009,795	54.91	55.50	+ 33.01
Class II	31	39	2,125,395	2,846,385	19.38	19.72	+ 33.92
Class III	49	54	1,517,674	1,707,850	13.84	11.83	+ 12.53
Class IV	60	92	824,642	1,325,329	7.52	9.18	+ 60.72
Class V	59	62	440,935	474,754	4.02	3.29	+ 7.67
Class VI	9	20	36,422	69,373	0.33	0.48	+ 90.47
Total	**223**	**291**	**10,967,033**	**14,433,486**	**100.00**	**100.00**	**+ 31.61**

STATEMENT 8

Statement showing the details of changes in size-class of Towns 1971-1981

Class of Town	No. of Towns in 1971	No. of Towns of 1971 classified or merged with other towns in 1981	No. of Towns of 1971 shifted to other size class in 1981 (Loss to a particular size class)	No. of Towns of 1971 Remained within the same size class in 1981	No. of Towns of 1971 shifted from other size class in 1981 (Gain to a particular size class)	No. of new Towns added in 1981	Total Towns in 1981
1	2	3	4	5	6	7	8
I	15	..	..	15	8 (7 from Class II, 1 from Class IV)	1 (Bally-M in 1971 it was merged with Haora)	24
II	31	..	7 (to Class I)	24	13 (from Class III)	2 (Khargpur Rly. Settlement shown as a separate Town in 1981)	39
III	49	2 (Merged with Jadabpur-M)	15 (13 to Class II 2 to Class IV)	32	21 (18 from Class IV, 2 from Class V, 1 from Class VI)	1	54
IV	60	4 (Merged with Jadabpur-M	19 (18 to Class III 1 to Class I *i.e.* Jadabpur)	37	32 (30 from Class V, 2 from Class III)	23	92
V	59	5(3 merged with Jadabpur, 1 with Gayespur, 1 declassified)	32 (30 to Class IV 2 to Class III)	22	2 (from Class VI)	38	62
VI	9	1 (declassified)	3 (2 to Class V 1 to Class III)	5	..	15	20
Total	**223**	**12**	**76**	**135**	**76**	**80**	**291**

Statement 8 shows the details of how the urban units of different size classes have shifted their respective positions over 1971-81 decade. In 1971, there were 15 class I towns : in 1981, there are 24 towns belonging to this class. Of them, as many as 8 towns have shifted themselves to this class by dint of crossing the minimum population figure, while 1 town is a direct fresh inclusion. Normally there should not have been any direct entry into this class, for attaining a population figure of 1 lakh or above simultaneously with winning the status of an urban unit is almost impossible in our socio-economic environment. What happened here was that Bally Municipality in 1971 was enumerated along with Haora Municipality as a component of the latter since Haora Municipality was to be converted into Haora Municipal Corporation, merging Bally and some other areas with the latter. In 1981 however, Bally Municipality has been considered as a separate Census entity in accordance with the prevailing situation. Hence, Bally has emerged as a town—and a town of Class I in 1981 Census.

Of the 8 Urban units that got themselves promoted to class I in 1981, 7 belonged to class II and 1 to class IV in 1971. The last one, once again, is a special case for a "promotion" from class IV to class I within a decade because of sheer increase of population is an extreme rarity. This particular case refers to Jadabpur Municipality, which did not exist as a Municipality in 1971. This Municipality was created just before the 1981 Census through a "merger" of 10 Non-municipal towns. Jadabpur Non-municipal town, which belonged to class IV in 1971 was one of those 10. With the creation of this Municipality the population total crossed the 1 lakh mark and thus Jadabpur "promoted" itself from class IV in 1971 to class I in 1981.

In the case of the other 7, the higher rank according to size-class, came in the normal way. Excepting Balurghat and Chandannagar, other towns (*i.e.*, Barrackpore, Titagarh, Naihati, Siliguri and Nabadwip) had been hovering near the 1 lakh mark in 1971 itself. Crossing of the said mark by Balurghat which had a population of 67,088 and Chandannagar which had a population of 75,238 in 1971 is somewhat remarkable.

In class II, there were 31 towns in 1971, and now there are 39. From those 31, as many as 7 moved up to class I in 1981, 13 towns joined this class on "promotion" from class III, and 2 towns got themselves put in this class independently and afresh. The latter two towns are Kharagpur Rly. Settlement Non-municipal town and Dabgram Non-municipal town. In 1971, Kharagpur city was a conglomeration of (a) Kharagpur Municipality (b) Kharagpur Non-municipal town, (c) Kharagpur I.I.T. Non-municipal town and (d) Kharagpur Rly. Settlement. In 1981 Kharagpur Non-municipal town and Kharagpur I.I.T. Non-municipal town have got themselves included into Kharagpur Municipality, while the Rly. Settlement now stands on its own as an independent town. And as the population of the Rly. Settlement has crossed the mark of 50,000 it has entered into class II afresh. The case of Dabgram Non-municipal town is quite peculiar. In 1971, Dabgram *mouza*, inspite of being geographically contiguous to Siliguri Municipality and having slightly more than 38,000 of population, was still considered to be a rural area, as it failed to satisfy other norms prescribed for an urban area. In 1981 however, Dabgram has not only qualified as an urban area in every respect, but has registered as high a population as 76,210. These two towns have thus registered their own lateral entry into class II in 1981.

The following 13 class III towns of 1971 have earned their respective berths in class II in 1981 by dint of crossing the 50,000 mark : Bhadreswar, Garulia, Bally Non-municipal town, Konnagar, Barasat, Ashoknagar-Kalyangarh, Ranaghat, Nangi, Chakdaha, Rayganj, Darjiling, Chittaranjan and Raniganj. In all these cases, the respective population figure for these towns in 1971 was 40,000 and plus, except in the cases of Bally Non-municipal and Konnagar. The 1971 population of Bally Non-municipal town was 38,892 and that of Konnagar was 34,424. Their individual growth rate during 1971–81 has come to 41.48% and 48.75% respectively.

In 1971 Census, 49 towns were put in class III. After effecting the "promotions" and "demotions", there are now 54 towns in this class. From among those 49 towns, 2 lost their individual identities being now merged into the newly formed Jadabpur Municipality, 13 left this class to join class II, 2 got "demoted" to class IV. 21 joined this class on "promotion" and 1 obtained a lateral entry into this class outright. Those two which got merged in Jadabpur Municipality are Kasba and Garfa Non-municipal towns, those 13 which got "promoted" to class II have already been identified, those which got "demoted" to class IV are Barrackpur Cantonment and Ondal Non-municipal town and the town that obtained a lateral entry into class III in 1981 is Bidhan Nagar Non-municipal town. The last named did not exist in the shape of an urban area in 1971. Conscious town planning activities from the Govt. end has resulted into its quick growth thereby making this lateral and outright entry into class III possible. On the other hand, the "demotion" of Ondal town from class III to class IV is something of an exception. The fact that from 1971, the population of Ondal went down from 21,810 to 14,884 will need individual investigation. The so-called "demotion" of Barrackpur Cantonment due to decrease of population from 25,031 to 19,859 may not be demographically significant because of the fact that this urban unit is a Cantonment, population content of which may not follow normal principles of human settlement.

Of the 21 towns which got "promoted" to class III this time, 18 came from class IV, 2 from class V and 1 from class VI. The following 18 came from class IV : Kalyani, Alipur Duar Rly. Jnc., Fort Gloster, Krishnapur, Chengail, Jhargram, Adra, Canning, Murshidabad, Dhupguri, Birlapur, Sainthia, Dubrajpur, Islampur, Gangarampur, Taherpur, Gayeshpur Govt. Colony and Diamond Harbour. Among them, the performance of Krishnapur, Gangarampur, Taherpur, Gayeshpur Govt. Colony and Diamond Harbour is noteworthy for each one of them had population below 15,000 in 1971. Specially interesting are the cases of Taherpur and Gayeshpur Govt. Colony (which in 1981 has been transformed into Gayeshpur Notified Area) where respective population has increased from 13,104 and 13,082 in 1971 to 25,968 and 41,239 in 1981, thereby registering individual growth rates of 98.17% and 93.69%.

The towns which have joined class III from class V are Haldia and Batanagar. The 1971 population of these two towns were 9,968 and 9,108 respectively, and they have now increased to 21,106 and 20,355 in 1981. These two are clearly fine examples of fast developing small towns in this State. Their individual growth rate has respectively been 111.74% and 123.48%. [Growth rate of Batanagar has been calculated while putting the population of Batanagar and that of one outgrowth pertaining to Batanagar together for unavoidable reasons].

However, still more spectacular is the case of Phulia, a town that had only class VI status in 1971. From an almost negligible population of 4,627 in 1971, this town has now a population of 26,362. It has thus registered a fantastic growth rate of 469.74%. This is something of a unique case, for a class VI town earning a "promotion" straightway to class III within a single decade is indeed a rare event. The factors responsible for such high growth rate should deserve careful investigation in due time.

Coming down to class IV, we find a sizeable increase in number. While in 1971, we had 60 towns in this class, we now have as many as 92 in 1981. Of those 60 of 1971 Census 4 (*i.e.* Bansdroni, Santoshpur, Rajapur and Bademasar) have now been merged in Jadabpur Municipality; 18 already identified above have moved on to the next higher class, and 1, namely Jadabpur Non-municipal town, has got itself "promoted" to class I—once again, because of formation of Jadabpur Municipality.

Offsetting these exclusions from Class IV, there are as many as 55 inclusions in this class in 1981. 32 of them are results of inter-class shift and 23 are cases of fresh lateral entry. Of the 32 mentioned above, again, 30 are cases of "promotion" from class V to class IV and 2 are cases of "demotion" from class III to class IV. Those towns which got "promoted" from class V are : Nibra, Manikpur, Banupur, Chakapara, Dhuliya, Garui, Gurdaha, Krishnagar (Non-municipal). Jhorhat, Guriahati, Arjunpur, Mahisadal, Chandrakona, Beldanga, Amta, Jamuria, Nalhati, Mathabhanga, Khatra, Amlagora, Nebadhai-Dattapukur, Farakka Barrage, Jagadanandapur, Domohani, Panchla, Falakata, Bagula, Dakshin Jhapardaha, Jagadishpur and Kanyanagar. Among these towns, Jhorhat, Gurdaha, Panchla and Kanyanagar has shown impressive growth rates which are 203.06%, 145.23%, 141.03% and 114.62% respectively. [The growth rates of Jhorhat and Kanyanagar are inclusive of their respective outgrowths].

It has already been mentioned that 2 towns, *viz.* Barrackpur Cantonment and Ondal which belonged to class III in 1971 have been "demoted" in 1981. They now find their place in class IV.

The cases of fresh lateral entry into class IV in 1981 refer to the following towns : Laskarpur, Gopalpur, Raghunathpur, Chota Kalikapur, Sripur, Bhanowara, Gadigachha, Siarsol, Bagra, Amkula, Kajora, Kenda, Parashkol, Bahula, Chorra, Aistala, Sonarpur, Chak Kashipur, Bowali, Chinakuri, Shitalpur, Paschim Punropara and Cart Road. Lateral entry of as many as 23 fresh towns in this class shows an unmistakable trend of urbanisation of erstwhile rural areas, and it is further underlined by the fact that inspite of being first timers, all these 23 towns have population between 10,000 and 19,999.

Class V was credited with the largest number of towns in 1971. This class had 59 towns at that time. Of them, Kamdahari, Chakdaha and Purba Putiari got merged in Jadabpur Municipality, Kataganj-Gokulpur Govt. Colony merged with newly formed Gayeshpur Notified Area and Haripal ceased to be a town. Thus 5 urban units left class V in 1981. 32 more towns also got excluded from this class because of their "promotion" to higher classes. [30 towns have been "promoted" to class IV and 2 to class III]. As against these exclusions, inclusions range to 40, out of which 2 are cases of "promotion" from class VI and 38 are cases of lateral entry. The "promotions" from class VI took place in respect of Bandra and Podara. Their respective population in 1971 were 4,704 and 4,051

as against 7,667 and 7,496 respectively in 1981. The first-timers with a population between 5,000 and 9,999 are the following ones : Keota, Panchpara, Chandannagar, Sripur-Bagharghol, Raghunathpur, Naldanga, Gobindapur, Khalisani, Raghudebbati, Bandipur, Ramchandrapur, Noapara, Bipra Noapara, Madhusudanpur, Maheshtala, Ninga, Pariharpur, Ballavpur, Raghunath Chak, Dignala, Chak Bankola, Jhali Jhalia, Petana, Kasba, Panuhat, Mrigala, Monoharpur, Kaksa, Uttar Bagdogra, Uttar Latabari, Madanpur, Begampur, Odlabari, Sukdal, Khalor, Haringhata Dairy Farm, Gairkata and Saontaldih Thermal Power Project.

In 1971, class VI had 9 towns, 4 from whom are now excluded for one reason or other. One town namely Narayanpur has been declassified ; it is now an outgrowth only. 2 have got themselves "promoted" to class V and 1 to class III. They have already been identified in the above paragraphs. There are now 15 new entrants into this class and they are : Kotrung, Santoshpur Bandel Thermal Power Project, Nimeha, Parasia, Khandra, Lalbazar Ramnagar, Kolaghat Thermal Power Project, Srimantapur, Makardaha, Jagannathpur, Jaldhaka Hydel power Project, Digha and Bakreswar.

The above descriptive analysis shows the existence, to a considerable degree, of Inter-class shift of towns during the decade 1971-81. While 135 towns in all have retained their previous size-class status, as many as 76 have moved from one class to another ; and here, barring 2 cases of "demotion", all the rest have moved to classes higher than their respective 1971 class. This indicates a good amount of urban growth. On the other hand, 78 new towns have come into existence this time. [With two already existing units separately shown in 1981, this figure would come to 80]. On the negative side are only 2 cases where erstwhile towns have been declassified, *i.e.*, they have ceased to be towns. The birth of such new towns signify a lively scene on the urbanisation front.

An examination of inter-class shift patterns would show that over the decade under consideration, "promotions" from class V to class IV have been the highest, followed by those from class IV to class III, then by those from class III to class II and finally by those from class II to class I thereby making a pattern which tapers off as one moves higher and higher. This is to be only expected, for the population-size based classification of towns has been so devised that the minimum qualifying population-size doubles itself from one class to the next higher class (starting from class V), and the population of a town does not normally grow in that fashion. Even then, at the highest rung of the ladder, "promotion" of as many as 8 (7 to be very precise) towns to class I may be regarded as an important indicator of urban growth.

A further significant fact is that the smaller towns are not exactly stagnant or dying. A scrutiny of Statement 8 would show that (a) as many as 18 class IV towns (not counting the case of Jadabpur for the present), 2 class V towns and 1 class VI town got themselves "promoted" to class III ; as many as 30 class V towns got such "promotion" to class IV ; and 2 class VI towns went up to class V. (b) Simultaneously, 23 new towns entered into class IV, as many as 38 in class V, and 15 new towns were born in class VI. A combination of these two sets of facts unmistakably show that the smaller towns are very much kicking and alive in a demographic sense at least.

This however does not at all mean that class I, class II and class III towns are not growing. Population-content wise these three classes have remarkable growth. Statement 7 will show

how these classes of towns are accounting for a much higher percentage of population than those in class IV, V and VI. The point is, of course, obvious; it is but natural that bigger classes of towns should account for a larger number of persons than the smaller ones. The 24 class I towns taken together in 1981, have 55.50% of total urban population; similarly the 39 class II towns now account for 19.72% of the same and in the 54 class III towns live 11.83% of the total urban population. Thus these top three classes taken together account for 87.05% of total urban population in 1981, as against 12.95% of the same which are accounted for by the bottom three classes. The difference is simply enormous. Yet the fact remains that class IV, V and VI taken together have a larger percentage of total urban population than in 1971 (in which year, it was 11.87%), and class I, II and III account for a smaller percentage now than in 1971 (when it was 88.13%), thus underlining the tendency of smaller towns to grow—at least in comparative terms.

We may borrow the concepts of "effective urban unit" and "quasi-urban unit", from the authorities on this subject and apply them here. Effective urban units are those that have individual population of 20,000 or more, while quasi-urban units would have individual population of less than 20,000. In our Census terminology, urban units of class I, II and III are effective; and those of Class IV, V and VI are quasi-urban. A little bit of further calculation on the basis of Statement 7 will show that in 1971, the total effective urban population in West Bengal in absolute number was 9,665,034. The decadal percent variation works out to 29.00. In 1981, the total effective urban population is 12,564,030 and the decadal percentage variation is 29.99. On the other hand, in 1971, the total quasi-urban population was 1,301,999 with a decadal percent variation of 24.20. In 1981, these quantities respectively stand at 1,869,456 and 43.58. All these quantifications, however, have been arrived at without separating the population of outgrowths from their respective "mother towns"—a subject to which we shall turn presently. The differentiation between effective and quasi-urban population again brings us back to the same conclusion; while effective urban population has indeed been expanding, there is an unmistakable tendency for the quasi-urban population to grow too, inspite of the fact that quasi-urban units are normally predominantly rural from socio-economic point of view. The population in quasi-urban units however seems to be linked with emergence of new towns in each decade. The facts that in 1971 there were 43 new towns, but in 1981 there now are 78 new towns and as many as 79 outgrowths have influenced the population in quasi-urban units. This is somewhat obvious too, for new towns almost always belong to the quasi-urban group. In 1961, there were, similarly 68 new towns and the corresponding decadal percent variation came to 39.71.

VII

Since class I towns are still great drawer of crowds, the growth of these towns may be examined in slightly greater detail.

The majority of class I towns with population of 100,000 and above, are within the Calcutta Urban Agglomeration. From a close scrutiny of Table II it would be found that bigger cities have been growing, in most of the cases, at quite a fast rate. In other words, the cities are becoming bigger and bigger. The class I towns of the entire State are named at next page :

1	Calcutta	9	Panihati	17	Hugli-Chinsurah
2	Haora	10	Garden Reach	18	Serampur
3	South Suburban	11	Asansol	19	Nabadwip
4	Durgapur	12	Baranagar	20	Naihati
5	Bhatpara	13	Barddhaman	21	Balurghat
6	Jadabpur	14	Siliguri	22	Barrackpore
7	Kamarhati	15	Kharagpur	23	Titagarh
8	South Dum Dum	16	Bally	24	Chandannagar

The rate of growth of these cities have ranged from 4.54% (Calcutta) to 148.0%(Durgapur) in the decade 1971-81. The case of Durgapur can be considered to be a phenomenal one, as the urban growth of Durgapur Notified Area had been taking place from round about mid-60s to the present day through a carefully planned investment pattern in the industrial sector. In fact, over the previous decade 1961-71, the rate of growth of Durgapur Notified Area was 395.58%. Therefore, we can keep the Durgapur's rate of growth outside our purview for the present due to its extra ordinary nature. Even then, the highest rate of growth-sans Durgapur will come to 147.58% (Kharagpur) in 1971-81. In a way, however, the case of Kharagpur is also a little peculiar, since quite a large chunk of area (which were Kharagpur Non-municipal town, Kharagpur I.I.T. Non-municipal town and few other rural areas in 1971) had been included in the Municipality of Kharagpur just before the Census period of 1981. Nevertheless, the rate of growth of Kharagpur Municipality—as freshly defined-shows how fast a city can grow. At the other extreme, the case of Calcutta can also be taken as an exceptional case insofar as it is a very old city whose ability to expand further in terms of population is, in all probability, coming to a saturation point fast (so long as we consider the area under Calcutta Corporation only). Leaving aside these extreme cases, it would be found from scrutiny of Table II that the rate of growth of cities with 100,000 population and above have still continued to grow at a considerble rate. It is unfortunate that the rate of growth of Haora Municipal Corporation for 1971-81 could not be furnished because of problems concerning division of jurisdiction of Haora Municipal Corporation in 1971 as compared to that in 1981. But a Municipality like South Suburban or Jadabpur registered a growth rate of 44.75% and 54.85% respectively would certainly mean considerable expansion of population towards immediate south of Calcutta core city. Similarly, the cities of Siliguri and Balurghat on the northern side of the State have marked growth rates of 57.80% and 67.74% respectively. This would show that these cities are still expanding at a very fast rate indeed. In between, the other cities are growing at different rates none of which can be called very small. From this, one can conclude that big cities are becoming bigger and bigger at one end of the spectrum. It would appear as if they are exerting more and more "gravitational pull" and are attracting more and more populaton to themselves.

VIII

Geographically, which are the areas that are urbanisationally promising ?

In the State of West Bengal as a whole, the two most important areas acting as centres of urbanisation and exerting urbanisation effects to a very high degree are Calcutta core city

alongwith its urban agglomeration area and Ranigang/Asansol belt in the district of Barddhaman. Over the last decade urbanisation in these two areas have been quite sharp compared to other areas of West Bengal. In rest of the South Bengal, urbanisation has progressed by fits and starts only without any specific pattern. It is true that new centres of urbanisation like Haldia are emerging but they are yet to exert urbanisation effects significantly over the rural areas surrounding them. Even such industrial activities like establishment of Thermal Power Station in Santhaldih have not resulted in significant degree of urbanisation in the district of Puruliya which is still environmentally totally non-urban. In North Bengal region, Siliguri is one of the rare cases showing very high degree of urbanisation and expanding fast. Its association with the Non-municipal town of Dabgram in the district of Jalpaiguri is likely to result in significant urbanisation in near future. It may be recalled that the Non-municipal town of Dabgram which has become an urban unit for the first time in 1981 has reached a population figure of more than 76,000 and physically Dabgram is exactly adjacent to Siliguri. Barring the case of Siliguri and Dabgram only the town of Balurghat has shown a quick tempo of growth of urban population. Reasons for such growth of urban population in Balurghat is somewhat obscure, for, Balurghat was and continues to be basically a service town only and is devoid of any industrial activity worth its name so far. The rest of the North Bengal area is still almost totally non-urban and perhaps will continue to be so in near future. Siliguri however has great growth potential with an almost phenomenal growth of Dabgram on one side, and the growth of Uttar Bagdogra on the other. In between fall North Bengal University and Bagdogra Air Port which may very well serve as links with the core city of Siliguri in near future. The Railway Colony of New Jalpaiguri is also too near to Siliguri to be left out. In fact Siliguri with Dabgram could very well have been an urban agglomeration in 1981 itself but for the technical hitch caused by these two being part of two different districts. It is doubtful if in future this technical snag alone would be able to keep them separate.

Even without taking recourse to the concept of Standard Urban Area, the urbanisation process of places around Calcutta can be depicted thus : the present Calcutta Urban Agglomeration has already covered big chunks of Twentyfour Parganas, Haora, and Hugli districts and a somewhat smaller portion of Nadia—all along the river Hugli. On its northernmost end, it had Kalyani Notified Area in 1971. In 1981, it has advanced a little further by including the newly formed Gayeshpur Notified Area. A future link up with Madanpur still further north cannot be ruled out altogether. But the prospects of Calcutta U.A's further expansion in the south is brighter. This time it has reached up to Budge Budge on the south-west and Laskarpur on the south-east. It is quite possible that this U.A. will engulf places like Rajpur and Birlapur in future. On the west, in the district of Haora, Calcutta U.A's link up with Domjur U.A. is quite likely. Although along the eastern side, nothing is visible on the horizon of urbanisation, at this stage from the Census angle, it appears that the Govt. induced growth in terms of housing etc. is likely to expand Calcutta U.A. on this direction also in due course.

Another area with good potential of growth in terms of urbanisation is Asansol-Durgapur belt in the district of Barddhaman. Although many of the urban units in this area are mining and quarrying bases, that by itself, need not necessarily make them less urban than

others—at least from the Census point of view and judged by the Census criteria. If these criteria remain unchanged—as they probably will—there is a good possibility of the entire Asansol-Durgapur belt becoming a very big urban agglomeration by itself, merging within it, Durgapur Notified Area, Ondal U.A., Raniganj U.A., Asansol U.A. and Burnpur. Even the U.A's of Barakar, Chittaranjan, Dishergarh and Kulti may also join. That may make almost the entire northern half of Barddhaman district largely urbanised.

Besides these, the towns that may really have some potential are Haldia and perhaps Farakka, the urban growth of, and urbanisation centering around which will, of course depend upon quanta of planned investment by the Govt. in these places. All told, the overall future prospects of urbanisation in this state is not too discouraging; but of course the process of urbanisation depends upon too many factors—many of which are man-made decisions—to allow any clear cut forecast. A lot will naturally depend upon these "other factors".

WORK PARTICIPATION

IX

Tables III and IV yield an important portion of the result of the Census 1981 that concern the economic aspects only. The number of workers identified in course of the Census Operations and the percentage of this number to total population is an important index of the condition of an economy. In Table III, the number of main workers found in 1981 has been furnished along with total population of 1981 and thereafter, the percentage of main workers to total population has been worked out. It shows that in 1981, the number of main workers—as per the provisional figures—came to 15,509,621 and these main workers constitute 28.47% of the total population. The table also gives the percentage of workers to total population in 1971. As per 1971 Census the percentage of workers to total population was 27.91%. Thus the corresponding figure in 1981 shows just a marginal increase in the percentage of workers to total population in the entire State.

This description as obtainable from Table III is, however, to be taken cautiously insofar as the 1971 figure and the 1981 figure are not directly comparable. It may be noted that in 1981 this table refers to main workers; but in 1971 it referred to workers only. The divergence has arisen because of the fact that the definition of worker differed between 1971 and 1981: further the system of dividing the entire population by application of the concept of worker has also undergone a very important change. Earlier, in 1961 and then in 1971, the total population was divided into two categories mutually exclusive of each other. They were workers and non-workers respectively. But in 1981, this dichotomy has been replaced by a trichotomy with three categories mutually exclusive of each other, *viz.* main workers, marginal workers and non-workers.

The 1961 Census definition of worker was as follows :

"The basis of work will be satisfied in the case of seasonal work like cultivation, livestock, dairying, household industry etc., if the person has had some regular work of more than one hour a day throughout the greater part of the working season. In the case of regular employment in any trade, profession, service, business or commerce the basis of work will be satisfied if the person was employed during any of the fifteen days preceeding the day on which you visited the household."

In 1971, the following definition was applied :

"A worker is a person whose main activity is participation in any economically productive work by his physical or mental activity. Work involves not only actual work but effective supervision and direction of work. The reference period is one week prior to the date of enumeration in the case of regular work in trade, profession, service or business. If a person had any such regular work on any one of the days during this reference period and this has been returned as his main activity, the person will be categorised accordingly..... There are certain types of work which are not carried on throughout the year such as cultivation, livestock keeping, plantation work, some types of household industry etc. A person's main activity should be ascertained with reference to such work in last one year even if he was not economically active in the week prior to Enumeration."

Further, those who did not do any work in the manner described above, yet did some work were to come under the category of secondary worker. As per 1971 definition, it was to cover " cases like persons performing household duties or students who may not be engaged in any other economically productive work at all, as also those who, though basically are performing household duties or students etc., for the purpose of their main activity, still participated in some other economic activity such as helping the household in several items of work, as in cultivation, or in household industry, or in looking after the cattle, in attending to family business etc. but not to the extent as a full time worker. Such participation will be considered as secondary work of those persons...Participation of work that goes to augment the income of the household will only be treated as economic activity".

In 1981 Census any one who has done any work at all during the last one year is a worker. The definition of work as participation in economically productive activity either in physical or mental way remain more or less the same as in 1971. But this time the population has been classified into three main groups, each mutually exclusive of the others. The main workers are those who have worked for a major part of the year preceeding the Enumeration. In other words, the main worker is somebody who has done economically productive work for at least 183 days during the year preceeding Enumeration. The marginal workers are those who have worked any time at all in the year preceeding Enumeration but have not worked for a major part of that year. In other words, marginal workers are those who participated in economically productive work for less than 183 days during the year preceeding Enumeration. And finally, non-workers are those who has not done any economically productive work at all during the last one year.

Thus when the Table III speaks of main workers in 1981 and workers in 1971, these two quantities are not exactly the same. However, the data can be made to correspond to each other analytically if we talk in terms of work participation. The term work participation means the proportion of workers to total population (and not the proportion of labour force to total population). In 1961 Census, there was no question on secondary work for non-workers. Therefore, all who came under the category of workers in 1961 were a totality of the so-called main workers as well as marginal workers. In 1971, however, a specific enquiry was made as to the secondary work as has been pointed out in the earlier paragraph and in that year we do find persons who were basically non-workers but did perform some kind of secondary work or other. The workers of 1971 if added to the non-workers with secondary work of 1971 would yield the total work participation. On the other hand, in 1981 since there has been clear distinction between the main workers, marginal workers and non-workers, there is no difficulty in adding the main workers with marginal workers and thus making the total comparable to the work participation in 1971.

Two Statements (Statement 9 & 10) are given at pages 30-31 ; one showing, all-India figures of work participation in 1961, 1971 and 1981 Censuses and the other showing the same for the State of West Bengal only. From these Statements it would be found that in West Bengal, the work participation rate in 1961 was of the order of 33.16% ; the same came down to 28.09% in 1971 and now it has registered a figure of 30.98% in 1981. The corresponding figures for work participation at all-India level for 1961, 1971 and 1981 are much higher than those for the State of West Bengal. It deserves special attention that the figure of 1981 at all-India level has been given provisionally, minus the figures for Jammu & Kashmir and Assam. However, keeping with the all-India trend it has been found that the 1961 worker participation rate is higher than the 1981 rate in West Bengal. Thus while there appeared to be a marginal improvement in respect of work participation in 1981 over the situation prevailing in 1971, the 1981 rate has failed to surpass the 1961 rate. In spite of relatively small increase in the percentage term for the entire State from 28.09% to 30.98% between 1971 and 1981 of total work participation rate, in absolute terms the number of workers in the State have increased by 4,431,832 during this period. On the other hand, in absolute terms in 1971 added only 865,749 workers to the 1961 total of 11,580,195. Thus when we compare the results of 1961, 1971 and 1981 in this respect we find that the decade 1961-71 was marked with an appreciably low rate of work participation while the next decade 1971-81 has somewhat restored the parity with 1951-61 level. As to why the 1971-81 work participation rate failed to surpass the 1951-61 work participation rate, an analysis in greater details would have to be given after the figures are finalised. In spite of the fact that the all-India growth of work participation is much higher than that in West Bengal during the decade 1971-81, the increase in number of workers in absolute terms from 12,445,944 in 1971 to 16,877,776 in 1981 may perhaps be considered to be a not too insignificant gain in the context of West Bengal. Further in 1981, the conceptual trichotomy helps to bring into focus rather sharply the fact that as many as 15,509,621 persons have been found to be main workers only, in other words persons who have worked for at least six months during the one year preceeding

the Enumeration. In earlier Censuses persons working for six months or more before the Enumeration, were not sepatately singled out and were merged with the omnibus concept of work. Even then, however, it would be perhaps a fair surmise to say that the workers of this category alone have increased considerably over the period 1971-81, since by comparing the number of workers of 1971 (not counting naturally the non-workers with secondary work) with the main workers of 1981, we find a net increase of 3,140,667 in absolute number. Needless to say, all workers of 1971 would not have been workers with six months work status.

A consideration of the Statement concerning West Bengal would indicate a few interesting points. One clear indication is that the growth of work participation rate among the females in this State is higher than the males for both its rural and urban counterparts. The female workers of the State as a whole registered a work participation percentage of 8.87 in 1981 against the same which came to 4.52 in 1971. On the other hand, the male workers of the State have shown a percentage rate of 51.13 in 1981 against a rate of 49.08 in 1971. Thus a net accrual of 4.35% in the case of females is considerably higher than the percentage of 2.05 incremental figure for the males. Taking the rural sector only, we find the female work participation rate to be of the order of 9.38% in 1981 against 4.69% of 1971 thereby registering an increment of 4.69% over the decade. The males on the other hand in rural sector have registered a slightly higher percentage rate than 1971. In 1971 this rate came to 48.80% while in 1981 it has rated a figure of 51.41%. The net increase thus comes to 2.61% only. Similarly in the urban sector female workers have gone ahead of their male counterparts. In 1981, the female work participation for urban sector is 7.33% against the 1971 percentage rate of 3.95. The urban males on the other hand have registered a percentage of 50.39 in 1981 against its earlier performance of 49.83 in 1971. Thus while the males have increased work participation rate in urban sector by 0.56% only, the female workers have increased the same by 3.38% over the decade.

2. Jalpaiguri	1,750,159	544,686	105	544,791	31.13
3. Darjiling	781,777	282,442	185	282,627	36.15
4. West Dinajpur	1,859,887	520,375	125	520,500	27.99
5. Maldah	1,612,657	436,873	150	437,023	27.10
6. Murshidabad	2,946,563	761,704	310	762,014	25.86
7. Nadia	2,223,911	552,548	695	553,243	24.88
8. Twentyfour Parganas	8,449,482	2,185,539	455	2,185,994	25.87
9. Calcutta	3,148,746	1,165,542	1,460	1,167,002	37.06
10. Haora	2,417,286	642,347	135	642,482	26.58
11. Hugli	2,872,116	775,132	810	775,942	27.02
12. Medinipur	5,509,247	1,470,732	60,010	1,530,742	27.78
13. Bankura	2,031,039	574,935	140	575,075	28.31
14. Puruliya	1,602,875	498,547	11,340	509,887	31.81
15. Barddhaman	3,916,174	1,093,809	700	1,094,509	27.95
16. Birbhum	1,775,909	473,231	255	473,486	26.66

It will be seen therefrom that while the percentage of total workers to population has increased both all over the State as well as in each of the districts, the same has undergone a net decrease in the case of Calcutta only. In fact, the percentage of workers to total population in Calcutta city has been going down steadily from 1961 onwards. From 40.41% in 1961, it went down to 37.06% in 1971 and now has further gone down to 35.25% in 1981. Apart from this decrease in percentage terms, what is perhaps most interesting is that in the case of Calcutta city the number of workers in absolute terms has also been decreasing consistently. From 1,182,789 in 1961, it came down to 1,167,002 in 1971 and then it has further gone down to 1,160,431 in 1981. The reasons for this consistent decrease require thorough investigation but it will have to wait till the required data are available after the completion of tabulation.

X

Table IV distributes the main workers of 1981 into four broad groups—cultivator, agricultural labourer, household industry workers and other workers. According to this table, out of 15,509,621 main workers, 30.64% fall into the category of cultivators, 24.82% are agricultural labourers, 4.12% are workers engaged in household industry while 40.42% constitute other workers. In 1971, this percentage stood respectively at 31.97%, 26.46%, 2.70% and 38.87%. For the same reasons explained earlier, the 1971 percentage figure will not be directly comparable with those of 1981. The provisional figures of 1981 unfortunately do not permit at this moment the divisioning of marginal workers into these four broad groups. However, even with unadjusted percentage figures, a broad comparison between 1971 and 1981 may be attempted to obtain some indication of the trend. For this purpose, Statements 12 and 13 have been given below. Statement 12 gives the all-India picture, while Statement 13 shows the position of West Bengal in this respect.

Proportion of workers to total population (percentage) engaged in cultivation has gone down from 12.77% in 1961 to 8.93% in 1971. In 1981 it has registered a further downward trend giving a figure of 8.72% only. On the other hand, the same for agricultural labourers in 1961 was 5.07% which registered a sharp increase to 7.38% in 1971 and in 1981 has gone down to 7 06%. Coming to the class of 'other workers', we find that in 1971, the proportion of workers included in this group fell to 11.60% from the earlier 1961 figure of 15 32%. But in 1981, this has increased to 12.69%.

Against this total picture for all workers in the State, we can now move to rural/urban division and try to show the comparison between males and females. The total percentage figure of workers engaged in cultivation has registered only a very slightly marginal fall in 1981 (from 11.71% in 1971 to 11.69% in 1981), it would be found that of such cultivators in rural areas less males are now working as cultivators (the respective figures for 1971 and 1981 are 22.09% and 21.66%). The proporation of female workers working as cultivators in rural areas has decidedly gone up (from 0.68% in 1971 to 1.15% in 1981). The same pattern has been repeated for cultivators residing in urban areas also—though for obvious reasons the percentage figures themselves are quite small compared to those for rural.

The proportion of agricultural labourers to total population – as noted earlier-went up in 1971 and then has come down in 1981. It would appear that the male workers residing in rural areas and engaged in agricultural labour are less this time (1971 figure was 16.12% and 1981 figure is 15.33%). But among the female workers in rural areas engagement in agricultural labour has gone up to 2.99% in 1981 from 2.50% in 1971. The overall figure of proportion for total workers residing in urban areas and engaged in agricultural labour has decreased from 0.91% in 1971 to 0.78% in 1981. This figure for male workers residing in urban areas has also gone down (from 1.46% in 1971 to 1.27% in 1981). Conforming to the earlier pattern, amongst the female workers residing in urban areas, the concerned figure has very marginally gone up to 0.19% in 1981 from 0.17% in 1971.

In 1981, 7.29% of total rural workers are engaged in the category 'other workers' as compared to the figure of 5.97% in 1971. More of rural male as well as rural female workers have joined this category—the concerned figure for rural males going up to 12.19% in 1981 from 10.27% in 1971 and for rural females, the same going up to 2.13% in 1981 from 1.40% in 1971. Further, the participation of urban workers as a whole in this category of work has decreased to 27.52% in 1981 from 28.75% in 1971. The participation of urban male workers has also decreased to 46.35% in 1981 from 47.56% in 1971. But urban female workers are found to have joined this rank of other works in a larger number, the corresponding figures for urban female workers registering 4.77% this time compared to 3.72% of 1971.

From the above description it would stand out that participation of females in the work of cultivation, agricultural labour and other works have consistently increased over this decade compared to their male counterparts.

XI

Going back to the Table IV, one would perhaps be permitted to say that somewhat overall smaller percentage of cultivators and agricultural labourers this time point out to a possible less dependance on land than in the decade 1961-71. The correspondingly slightly

higher percentage figures of workers in household industry and other works categories thus indicate a better growth of secondary and tertiary sectors. This attempted generalisation would, however, have to be taken with a great deal of caution for the definition of other worker in Census terminology of 1981 includes such persons who are engaged in growing of plantation crops, edible nuts, fruits, coconut, ganja, cinchona, opium and medicinal plants, betel nuts, flowers, roots and tubers, chillies and spices (other than pepper and cardamom), vegetables and other crops not specifically included under cultivation. This definition also includes such persons who as members of the same household might have fulfilled all other conditions for being put into the household industry category but for the fact that they are engaged in any of the following : plantation work, livestock maintenance and production, hunting, trapping and selling of the catch, forestry and logging, fishing, mining and quarrying. Therefore other workers is a somewhat omnibus concept in which one is likely to find quite a few persons who would normally be put as workers in the primary sector, but are neither cultivators nor agricultural labourers nor even household industry workers in Census terminology.

To sum up, although figures revealed by the Provisional Tables are still quite inadequate and are by definition 'provisional' in nature, we can perhaps indicate that (a) the work participation rate in 1981 is somewhat better than that of 1971 but still falling short of the 1961 level ; (b) without going into the conceptual problem in details about the changes in definition of work, the 1981 work participation shows improvement from 1971 (though it still remains somewhat debatable as to whether the 1981 performance would be comparable to 1961) ; (c) the female workers both in rural areas and urban areas have come to claim slightly larger slice of work than they could do in 1971. On the other hand the performance of male workers both in rural and in urban areas have not improved by any big margin. In fact, females have—in a very generalised fashion—done better than males between 1971 and 1981 : (d) even after allowing advantage for a number of "ifs and buts', there would appear to be a slight tendency for the workers to move from their landbased work to other types of work ; and (e) finally if one compares the respective work participation performance of different districts in West Bengal it would appear that work participation has not taken place in a higher degree as a matter of rule in the so-called advanced areas as compared to the so-called backward areas.

LITERACY

XII

The Primary Census Abstract Part-I and Part-II appended to the present paper are self-explanatory. Some of the data have already been given in tabulated form in this booklet while some had been dealt with—albeit partially—in our earlier paper. Only one aspect needs a little bit of descriptive analysis. In Part-I of Primary Census Abstract given here, figures of literacy have been given district-wise after dividing the population of each district in urban and rural context and further sub-dividing the population between sexes. In Paper I it was pointed out that female literacy has been going up steadily in this State. This tentative finding is further supported by more detailed figures available at this moment. The Statement 14 would show the literacy percentage figures in this State in 1971. This is being given for facilitating comparison with 1981 figures.

	R	25.01	33.93	15 85
	U	47.25	54.70	38.92

If we now compare the picture of 1971 with that in 1981, we shall indeed find that female literacy has been making a welcome progress in this State. In considering this let us concentrate on rural population only since bulk of our population is still rural, and further, since from different points of view the position obtaining in rural areas can be relatively true representation of the State as a whole. To go about a bit descriptively, in Koch Bihar district, 37.56% of rural males and 16.35% of rural females have been found literate in 1981 as against 28.47% and 9.22% respectively in 1971 ; the same in Jalpaiguri district in 1981 is 34.00% and 15.32% against 1971 figures of 28.76% and 11.52%; in Darjiling district 44.61% of the rural males and 23.34% of rural females are literate this time in contrast with the 1971 figures of 35.23% and 15.88%, in the district of West Dinajpur, these figures in 1981 are 31.91% and 12.42% against the 1971 figures of 27.77% and 8.84% respectively; Maldah district this time has 29.60% of rural males and 12.18% of rural females as literate against 1971 picture of 23.64% and 7.56%, the same in Murshidabad district this time is 29.92% and 14.81% as against 24.29% and 9.99% in 1971 ; Nadia district reveals figures of 37.40% and 23.04% in 1981 against 32.24% and 17.56% in 1971 ; 45.88% of rural males and 22.69% of rural females in Twentyfour Parganas district are literate in 1981 as against 40.19% and 16.47% in 1971 ; the district of Haora reveals 54.92% of rural males and 32.01% of rural females are literate against respective figures of 43.18% and 20.62% in 1971 ; in the district of Hugli, 52.93% of rural males and 32.14% of rural females are literate in 1981 against the earlier figure of 43.61% and 22.32% in 1971 ; in the district of Medinipur these figures respectively in 1981 are 54.09% and 27.91% while in 1971 they were

respectively 44.23% and 17.75% ; in Bankura district 47.90% of rural males and 21.19% of rural females are literate this time as against 1971 figures of 36.16% and 12.88% ; Puruliya this time shows these figures respectively to be 43.50% and 10 49% as against their 1971 figures of 32.06% and 5.98% ; in the district of Barddhaman 44.82% of rural males 27.91% of rural females are literate in 1981 while in 1971 these figures respectively were 37.52% and 19.87% ; and finally in the district of Birbhum. 41.52% of rural males and 22.68% of rural females have been found to be literate in 1981 as against their earlier figures of 33.93% and 15.85% respectively in 1971.

This would tend to show that female literacy in rural areas of West Bengal is, by and large, making slightly better progress than the literacy among the rural males. This *observation is of course subject to further finding from final figures of literacy. But* whatever may be limited value of the provisional figures, perhaps the trend obtainable now would remain unaffected. The trend is all the more encouraging insofar as the areas which were traditionally known to be backward are making sizeable progress in female literacy in real means.

XIII

One more point deserves specific mention. Column 16 of the Primary Census Abstract Part-I appended to this volume shows the percentage growth rate of population of the decade 1971-81 for the entire State as well as for each district separately dividing the population between the rural and urban sectors. A comparison of this decadal growth rate with the earlier decade seems to be important. Statement 15 below gives the same figures for the decade 1961-71.

STATEMENT 15

Decadal growth rate : 1961-71

State/District	Decadal growth rate (percentage)		
	Total	Rural	Urban
1	2	3	4
WEST BENGAL	**26.87**	**26.38**	**28.41**
1. Koch Bihar	38.67	38.93	35.28
2. Jalpaiguri	28.76	28.05	35.75
3. Darjiling	25.16	25.33	24.60
4. West Dinajpur	40.50	37.67	75.50
5. Maldah	31.98	31.89	33.95
6. Murshidabad	28.39	28.51	27.10
7. Nadia	30.14	29.63	32.57
8. Twentyfour Parganas	34.53	27.93	48.67
9. Calcutta	7.57	..	7.57
10. Haora	18.58	15.69	22.84
11. Hugli	28.72	27.83	31.24
12. Medinipur	26.89	26.99	25.69
13. Bankura	22.02	21.85	24.21
14. Puruliya	17.86	16.01	43.13
15. Barddhaman	27.03	19.92	58.98
16. Birbhum	22.80	22.73	23.82

A comparison of Statement 15 with the figures in Column 16 of the Primary Census Abstract Part-I will at once show that while in most of the districts the decadal growth rate of total population is lower for the decade 1971-81 than the earlier decade, the growth rate of rural population has indeed gone down in every district invariably. Thus in Koch Bihar district the rate of growth of rural population is 25.18% against the figures of 38.93% in the earlier decade ; in Jalpaiguri it is 19.86% and the earlier decadal growth rate of rural population was 28.05% ; Darjiling has this time 20.70% growth rate of rural population as against its earlier growth rate of 25.33% ; West Dinajpur shows a figure of 26.63% while in the previous decade the figure read 37.67% ; in Maldah this time the figure is 25.45% against its earlier dacadal figure of 31. 89%; in Murshidabad the decadal growth rate of rural population in 1981 is 24.77% as compared to the 1961-71 growth rate of 28.51% ; this figure comes to 29.06% in Nadia as against its earlier figure of 29.63% in the decade 1961-71 ; the decadal growth rate of rural population in Twentyfour Parganas district has come down from 27.93% in 1961-71 to 19.62% in 1971-81 ; the district of Haora this time registers a figure of 15.41% and its earlier decadal growth rate of rural population was 15.69% ; in the district of Hugli, the growth rate of rural population is 18.43% while the same was 27.83% in the earlier decade ; Medinipur district registers a rate of 20.84% in 1971-81 as against the figure of 26.99% in 1961-71 ; in the district of Bankura the rural population has grown over this decade at the rate of 16.69% while it grew at the rate of 21.85% in 1961-71 ; the district of Puruliya registers the figure of 14.83% in this respect against its earlier figure of 16.01% in 1961-71 ; the same has gone down from 19.92% in the district of Barddhaman in 1961-71 decade to 11.87% in 1971-81 decade ; and finally in the district of Birbhum, the growth rate of rural population over the present decade has been found to be 16.30% while the same was 22.73% in the earlier decade.

Almost everywhere the rate of growth of urban population has increased in the decade under consideration, except for the districts of Koch Bihar, West Dinajpur Twentyfour Parganas, Bankura and Puruliya (also Calcutta which is not relevant here). The decadal growth rate of rural population in the district of Jalpaiguri has been found to be quite high compared to its earlier performance while at the other extreme in the district of of Barddhaman, where the decadal growth rate of urban population has almost remained stationery. Without attaching too much of importance on the variation in the growth rate of urban population we may perhaps specially concentrare on the rate of growth of population in rural areas which is more likely to be a true indicator of population growth rate. As far as our provisional statistics indicate, the growth rate of population in rural areas in West Bengal has been found to be of a lower order than in the previous decade. If this trend finds support from final population figures after the tables are generated in due course, it will indeed be a very welcome conclusion.

DISABLED POPULATION

XIV

Finally, we include in the present Paper an account of the disabled populaton by type of disability, although this is, strictly speaking, not a subject-matter of this Paper. When Houselisting and Housenumbering Operation was undertaken—as a preliminary to Enumeration—during August—early October 1980, a few questions were asked in every house to obtain the number of three specific types of disabled persons. The questions asked were : "Is there a physically handicapped person in the household ? If so, indicate number of those who are totally blind/totally crippled/totally dumb". It may be noted that no attempt was made to obtain information about age, sex etc. of such disabled persons. Since this information so obtained during Houselisting will find a place only in H-series of tabulation which will be taken up much later, we thought we could just publish some kind of summary of the results of our enquiry in this Paper. Statement 16 given below sums up the result in this respect.

STATEMENT 16

There is no comment necessary except the following : The definitions applied have to be followed carefully, for the Census definitions—specially of the crippled—would differ considerably from the description of the physically handicapped, one would normally give. By totally blind is meant such a person who has lost his eyesight totally in both the eyes. In explaining the term 'totally crippled', I would better quote from our concerned instruction booklet. " The term totally crippled refers to such persons who have lost their arms or limbs...The loss of arms or legs or all the four limbs refers to loss of both the arms or loss of both the legs. It is not necessary that the disabled should have lost both arms and legs. The loss of either of these, *i.e.*, both arms or both legs would be sufficient for classification as totally crippled. Please note that the loss of only one arm and/or one leg will not classify a person as totally crippled. The loss here refers to inability to use and not necessarily physical absence. Thus, a paralytic who has lost the use of both the legs or both the arms, will be totally crippled, though the legs or arms as such are physically present...A person may be blind or crippled due to old age. In such cases also, he should be included in the relevant column if he suffers from such a disability". The term "totally dumb" of course does not need any explanation and was used in the same sense in which it would be used by anyone else.

Thus, the sole point that deserves notice is that the definitions used by us in finding out the number of these three specific types of disabled persons are not the same, in every case, as would be used in common parlance. Another minor and somewhat obvious point is that these numbers are valid with reference to that period of time when the Houselisting Operation was undertaken in West Bengal, *i.e.*, August—early October, 1980.

TABLE-I

RURAL AND URBAN COMPOSITION OF POPULATION

1981 Census
(Provisional Figures)

Notes:

(1) The following abbreviations have been used for the status of a Town.

M. C. = Municipal Corporation
N. A. = Notified Area
Cantt. = Cantonment
M. = Municipal Town
N. M. = Non-Municipal Town
T. C. = Town Committee
O. G. = Outgrowth
U. A. = Urban Agglomeration

(2) The population figures of Barrackpore (M) and Bhatpara (M) shown in the P. C A. Part-I & Part-II and those shown in the other Tables and State P. C. A. do not tally because the population of outgrowth of these two town has not been included in P. C. A. Part-I & Part-II.

CENSUS ABSTRACT—*concld.*
