PREFACE

This is the Supplement to Paper 1 of 1981 Census which was brought out soon after the census enumeration in the state in May, 1981. Presented and discussed in that Paper were certain basic figures of population such as the total size and distribution, growth rate, sex ratio and literacy rates at the level of districts and urban agglomerations. In the present Supplement, the data being presented and discussed pertain in the main to two other important aspects viz; (i) urbanisation, and (ii) participation in work. The tables incorporated in this Paper broadly relate to population of towns and cities in the State, population classified as workers and non-workers and further classification of workers under the categories of cultivators, agricultural labourers, household industry workers and other workers. A table on handicapped population by broad categories of disability, based on information collected as part of the house-listing operations, has also been added to satisfy the curiosity of data users. A brief analysis of these tables is presented under relevant sub-headings. Considering the need of planners and data users for information at a level lower than the district, a special table containing comprehensive data on population, literacy and working population in each tehsil has been presented at the end of this Supplement.

It may not be out of place to point out that like Paper 1, the figures in this Supplement are also purely provisional, compiled as they are from the abstracts prepared by census enumerators in the course of field enumeration. These figures are subject to final confirmation after the detailed scrutiny and checking of the field data has been completed at the Regional Tabulation Offices. The publication is only intended to place before the Government and the public the most essential population data soon after the census field operations for immediate use and reference.

I must again take this opportunity to express my sincere thanks to the State Government, the District and Census Charge Officers, the Supervisors and notably the Enumerators without whose support and active involvement the census operations could not have been accomplished thoroughly and successfully.

I must express my gratitude to Shri P. Padmanabha, Registrar General & Census Commissioner of India and his colleagues in the Registrar General's Office for the encouragement, guidance and support constantly extended by them all through.

My colleagues in the Directorate have shown a missionary zeal and enthusiasm in their task throughout. In particular I owe my special gratitude to Shri Abdul Gani, Joint Director, for contributing the final text and supervising the preparation of this publication. He was ably assisted in this task by Shri B.L. Tiku, Investigator. Shri Tiku is an official of wonted dedication and energy deserving full acknowledgement. The other officials associated with the compilation of this publication are listed separately. I owe my sincere thanks to them all for their individual contributions.

It is my earnest hope that even with its provisional character the data presented and discussed in this Supplement will be found of immense use by the scholar, the administrator and the general reader alike.

Srinagar,
the 30th of July, 1981

A.H. KHAN
Director of Census Operations

FIGURES AT A GLANCE

JAMMU & KASHMIR STATE*

1. POPULATION	Persons	5,954,010
	Males	3,134,518
	Females	2,819,492
2. DECENNIAL POPULATION GROWTH RATE 1971-81		28.97 per cent
3. SEX RATIO		899 females per 1,000 males
4. LITERACY RATE	Persons	26.17 per cent
	Males	35.49 per cent
	Females	15.82 per cent
5. NO. OF TOWNS		58
6. PERCENTAGE OF URBAN POPULATION TO TOTAL POPULATION		21.00 per cent
7. PERCENTAGE OF MAIN WORKERS TO TOTAL POPULATION		30.08 per cent
8. PERCENTAGE BREAK-UP OF WORKERS BY DIFFERENT INDUSTRIAL CATEGORIES :—		
(i) Cultivators		57.85 per cent
(ii) Agricultural Labourers		3.71 per cent
(iii) Household Industries		5.56 per cent
(iv) Other Workers		32.88 per cent
9. MARGINAL WORKERS		13.42 per cent
10. NON-WORKERS		56.50 per cent

*The population figures exclude population of areas under unlawful occupation of Pakistan and China where census could not be taken.

BACKGROUND NOTE

BACKGROUND NOTE

It is the tradition of Indian Census to publish Provisional Population Totals just after the enumeration is carried out. In the case of Jammu & Kashmir, the count of population was completed on 10th of May, 1981 and on the 22nd of May, 1981, the provisional population results of the State were released in "Paper 1 of 1981 Census". The Paper gave the various types of information down to district level and contained the following tables :—

1. Figures at a glance ;
2. Comparative picture of the population of States/Union Territories of India;
3. Table 1 : Distribution of population, sex ratio and growth rate of population by districts, 1981;
4. Table 2 : Decadal variation in population since 1901;
5. Table 3 : Literacy (including population in age group 0—4);
6. Table 4 : Cities/Urban Agglomerations with a population of 100,000 and above.

The present publication is a supplement to Paper 1 of 1981 census and covers much wider field of information like rural-urban population, urban population by size class of towns, distribution of main workers further classified by broad categories like cultivators, agricultural labourers, household industries and other workers, marginal workers and non-workers for each tehsil and town separately. The relevant details have been presented in the following set of tables :—

1. Figures at a glance ;
2. Table 1 : Urban population in states and union territories of India, 1981;
3. Table 2 : Rural and Urban composition of population in the state and districts, 1981;
4. Table 3 : Population and growth rate of cities, urban agglomerations and towns, 1981;
5. Table 4 : Urban population by size class of towns, 1981;
6. Table 5 : Distribution of main workers in the state and districts, 1981;
7. Table 6 : Distribution of main workers by cultivators, agricultural labourers, household industry and other workers in the state and districts, 1981;
8. Table 7 : Handicapped population in the state and districts, 1981;
9. Primary Census Abstract—Part I : Population by sex, sex ratio, growth rate, literates and literacy rates in the state, its districts, tehsils, towns and urban agglomerations, 1981;

   Part II : Total main workers, percentage of main workers to total population, cultivators, agricultural labourers, household industry, other workers, marginal workers and non-workers in the state, districts, tehsils, cities, towns and urban agglomerations.

As in the case of Paper 1 of 1981 Census, the data given in this supplement is also based on abstracts compiled by the field enumerators and is therefore absolutely provisional. For this reason, the information contained in this booklet may suffer from certain limitations. The purpose of this publication is simply to make available to the govenment and those interested, as quickly as we could, some basic particulars about the population of the state. Detailed tables showing demographic, social and economic characteristics of the population with analytical notes in a comprehensive and meaningful manner would be brought out in different publications later when the schedules canvassed in the field during the census are subjected to intensive scrutiny and processing.

NOTE:—The population figures exclude population of areas under unlawful occupation of Pakistan and China where census could not be taken.

ANALYSIS OF RESULTS

ANALYSIS OF RESULTS

Definition of an Urban Area

The definition of a town has varied from decade to decade since 1901. Before 1901 however the concept of an urban area was very hazy and no criterion other than the classification of such of the units as constituted the headquarters of the Government or where the armed forces were concentrated or which had been declared as municipalities had been evolved. With the passage of time, the concept of an urban area was gradually developed and the title of an area for being classified as urban was determined if it satisfied certain conditions such as the size of its population, historical importance and volume of commercial transactions. In 1911, however the State census commissioner felt that as Jammu & Kashmir was essentially an agricultural area, it was not possible to find urban areas with a minimum population of 5,000 as prescribed in the Imperial Census Code. He therefore treated as towns all such areas as possessed historical and administrative importance. In 1921, a town was defined as an area having (i) a population of not less than 2,000 and (ii) any qasba of some historical or administrative importance, irrespective of the size of inhabitant population. This definition did not undergo any change even at the 1931 census with regard to the scale of population. Emphasis was however laid in this census on the importance of an area as a trade market or where urban amenities such as educational institutions, sanitation etc. being available. This definition was adhered to in the 1941 census also. No census was conducted in the State in 1951. It was in 1961 for the first time that a standard conceptual framework of an urban unit was evolved. Under this framework all corporations, municipalities and cantonment boards, irrespective of their population or other characteristics were to be treated as towns.

For other areas, the following three tests were to be satisfied before being treated as urban :—

1. Population not being below 5,000;

2. At least 3/4th working population consisting of non-agriculturists;

3. Density of population not being less than 1,000 persons per square mile.

The same criteria were followed in the 1971 census with a slight modification in that in applying test No. 2, it was indicated that 3/4th of the male working population should consist of non-agriculturists. For the 1981 census the classification of urban areas has been based on the following criteria :

(a) All places with a municipality, corporation or cantonment board or notified town area committee;

(b) All other places which satisfied the following criteria :

(i) A minimum population of 5,000;

(ii) At least 75 per cent of male working population engaged in non-agricultural (and allied) activity;

(iii) A density of population of at least 400 per sq. km. (1,000 per sq. mile).

The framework of an urban area as followed in the present census thus varies slightly from that of 1961 and 1971 census in so far as criterion (b) (ii) is concerned. At the 1961 and 1971 censuses, the male population working in activities such as fishing, logging etc. was also treated as engaged in non-agricultural activity whereas in the 1981 census, these activities have been treated as agricultural for the purpose. All places which satisfied the criterion (a) above were considered as statutory towns while those as were not statutory towns but satisfied the tests laid down in criterion (b) above were considered as non-statutory census towns. It is worthwhile to mention here that under the above framework the only area other than the 57 statutory towns which on examination prior to actual census qualified to satisfy the eligibility tests of a census town is Rehambal in Udhampur district. Although the census count has returned the population of Rehambal a little less than 5,000 persons, it nevertheless satisfies the other distinct urban characteristics mentioned under criterion (b) above.

Concept of Urban Agglomeration

The concept of urban agglomeration adopted for the first time during the 1971 census was an improvement on the concept of town-group adopted in the 1961 census. This concept of urban agglomeration is being followed for the 1981 census also and the data presented on the same lines as in 1971 census. In forming the urban agglomerations the following conceptual guidelines set out by the Census Commissioner of India were to be kept in view :—

> *It must form a continuous urban spread constituting a town and adjoining urban outgrowths or two or more physically contiguous towns together with the continuous well recognised urban outgrowths, if any, of such towns. In several areas around a core city and statutory town have come up fairly large well recognised railway colonies, university campuses, port areas, military camps, etc. and even though they are outside the statutory limits of the corporation, municipality or cantonment, they fall within the revenue limits of the village or villages which is or are contiguous to the town. It may not be altogether realistic to treat such areas lying out-side the statutory limits of a town as rural units; at the same time each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit. Such areas deserve to be reckoned alongwith the town and the continuous spread including such urban outgrowths would deserve to be treated as an integrated urban area. Each such agglomeration may be made up of more than one statutory town adjoining one another such as a municipality and the adjoining cantonment and also other adjoining urban outgrowths such as railway colony, university campus, etc. Such outgrowths which did not qualify to be treated as individual towns in their own right should be treated as urban appendages of the units to which they are contiguous.*

The following are the possible different situations in which urban agglomeration would be constituted :—

(i) *a city or town with a continuous outgrowth (the part of growth being outside the statutory limits but falling within the boundaries of the adjoining village or villages)* ;

(ii) *two or more adjoining towns with their outgrowths as in (i) above; and*

(iii) *a city and one or more adjoining towns with their outgrowths all of which form continuous spread.*

Proceeding on the above framework of the concept, two urban agglomerations were formed in this State namely Srinagar & Jammu. Srinagar urban agglomeration is constituted of Srinagar municipality, Badamibagh cantonment and outgrowth consisting of 8 villages belonging to Srinagar, Chadura and Badgam tehsils. In 1971, this urban agglomeration consisted of Srinagar municipality, Badamibagh cantonment and outgrowth of 4 villages belonging to Badgam district. Jammu urban agglomeration consists of Jammu municipality, Jammu cantonment and outgrowth of 6 villages belonging to Jammu tehsil. In 1971, it consisted of Jammu municipality, Jammu cantonment and outgrowth of 3 villages belonging to Jammu tehsil.

Inter-State Comparison of Urban Population

A look at table 1 will show that in the matter of urbanization, which by any yardstick is one of the very important indicators of economic development, India continues to occupy a low position, with only 23.71% of its population living in urban areas. In the economically advanced countries of the world like U.K., Canada, France, U.S.A. and Japan the corresponding proportion varies in the range of 70% to 80%. However, looking at the sheer numbers, based on the 1981 census provisional figures, the urban population of the country, even after excluding Assam makes a staggering total of 157,439,118 persons which is almost as much as the total urban population of U.K., Canada, France and Japan put together.

Amongst the States, the most urbanised is Maharashtra, with 35.03% of its population living in urban areas, followed closely by Tamil Nadu and Gujarat with the Corresponding proportion at 32.98% and 31 08% respectively. Other States where the urban proportion is higher than the all-India average are Karnataka (28.92%), Punjab (27.72%), West Bengal (26.49%) and Manipur (26.44%). Amongst the union territories, Chandigarh and Delhi stand out conspicuously with 93.60% and 92.84% of their respective populations being urban.

Contrary to this, Jammu & Kashmir continues to take its position among the poorly urbanised States of the country. With only 21% of its population living in urban areas it is placed even lower than the all-India average. The consolation however is that it is still an advance over 1971 position when the corresponding proportion was 18.59% only. In absolute numbers the urban dwellers in the State have increased from 858,221 in 1971 to 1,250,611 persons in 1981.

Proportion of Urban Population in the State, 1901—1981

The following statement gives the number of towns in the State and the percentage of urban population to total population for each of the census years from 1901 to 1981 :—

NUMBER OF TOWNS AND PROPORTION OF URBAN POPULATION IN THE STATE, 1901 TO 1981

Year	No. of towns	Proportion of urban population to total population (Per cent)
1	2	3
1901	2	7.42
1911	45	11.71
1921	29	11.04
1931	31	11.90
1941	32	13.12
1951*	25	14.05
1961	43	16.66
1971	45	18.59
1981	58	21.00

*No census was conducted in the State in 1951. For purposes of comparison only such of the towns as were common both in 1941 and 1961 were treated as such in 1951.

The above statistics show that the number of urban units in Jammu & Kashmir State has been steadily increasing in every census. However, while the proportion of urban population to total population has more or less remained constant around 11% in each of the censuses held from 1911 to 1931 it has shown a perceptible increase from 1941 onwards, having gone up from 13.12% in that year to 18.59% in 1971 and then on to 21.00% in 1981. The lowest proportion of 7.42% in 1901 is partly due to the fact that no attempt was made for proper demarcation of rural and urban areas and the only places treated as towns in 1901 consisted of the two municipalities of Srinagar and Jammu.

Distribution of Towns and Urban Population among the Districts, 1981

Of the total number of 58 urban areas in the State in 1981, the largest number is in Jammu district (9) followed by Anantnag (8) and Doda, Udhampur and Kathua (6 each), as shown by the following statement which also indicates the proportion claimed by each district of the State's urban population :—

NUMBER OF TOWNS AND PERCENTAGE OF URBAN POPULATION TO TOTAL POPULATION, STATE AND DISTRICTS, 1981

State/District	No. of towns	Urban population, 1981	Percentage to the urban population of the State
1	2	3	4
JAMMU & KASHMIR* ..	**58**	**1,250,611**	**100.00**
Anantnag	8	70,071	5.60
Pulwama	4	36,323	2.90
Srinagar	3	582,933	46.61
Badgam	1	37,963	3.04
Baramula	6	89,760	7.18
Kupwara	2	9,684	0.77
Kargil	1	3,442	0.28
Ladakh	1	7,978	0.64
Doda	6	25,059	2.00
Udhampur	6	41,958	3.36
Kathua	6	42,183	3.37
Jammu	9	274,233	21.93
Rajauri	4	14,903	1.19
Punch	1	14,121	1.13

*The population figures exclude population of areas under unlawful occupation of Pakistan and China where census could not be taken.

It will however be seen that Srinagar and Jammu are the only two districts with a sizeable urban component. Even between these two Srinagar commands a distinctive position, but this is primarily because of Badgam having been carved out as a separate district. All other districts have very low percentage (less than 10%) of urban population. Amongst them however Anantnag and Baramula are relatively better placed with percentages of 7.18 and 5.60 respectively. On the other hand, districts like Kargil, Ladakh and Kupwara are almost entirely rural, the urban component being so insignificant as to be less than 1% in each case.

Urban Population by Size Class of Towns, 1981

Tables 3 and 4 presented in this supplement show (i) the sex-wise population as returned at the 1981 census and growth rates of cities, urban agglomerations and towns for 1961—71 and 1971—81 and (ii) growth rates and sex ratios for each size class of towns. It may be mentioned that for purposes of census, all urban areas including agglomerations have been divided into six different classes according to their population size, as shown below :

Class	*Population size*
I	100,000 & above
II	50,000—99,999
III	20,000—49,999
IV	10,000—19,999
V	5,000—9,999
VI	Less than 5,000

As stated earlier, there has been a significant increase in the number of towns in the last decade, having gone up from 45 in 1971 to 58 in 1981, including the two cantonments of Badamibagh and Jammu which form part of Srinagar and Jammu urban agglomerations respectively. The distribution of population by size class of towns as given in table 4 shows that class I towns, of which we have only 2 in the State, comprise as much as 65.87% of the State's total urban population. At the 1971 census, this proportion was a little higher (68.45%). As in the past , no town has come up to the level of recognition as Class II even in 1981. Class III & V towns however follow in order each claiming a little more than 11% of the total urban population. The corresponding proportions of these two classes of towns in 1971 were 9.52% and 11.01% respectively. Class VI & IV towns are placed almost at level with the corresponding proportion at a little more than 5% in each case. The proportion of class VI towns in 1971 was 5.69% only. One of the main reasons accounting for this uneven growth in the proportion of population in various size classes of towns is the inclusion of new towns and upgradation of some of the old towns during the intercensal period. For instance, Kathua and Udhampur which were class IV towns in 1971 came up to be recognised as class III towns in 1981, raising the percentage of this group from 9.52 in 1971 to 11.85 now. The decrease in the proportion of class IV towns as a result of this upgradation was however off-set by recognition of Bijbehara, Pampore and Bandipore as class IV towns. These were only class V towns in 1971. Another town which came to be included in class IV towns for the first time is Bari Brahamana consequent upon its notification as a town during the intercensal period. At the same time the loss of the three towns from class V was more than made up by upgradation of Mattan and Doda, previously in class VI, besides inclusion of 5 new towns viz.; Ganderbal, Charari-Sharief, Pulwama, Pattan and Parole, notified as such after 1971. With a net increase of 4 towns over 1971, the proportion of urban population in this size class has shot up to 11.18% in 1981. As regards class VI towns, even after the loss of three towns, Mattan and Doda due to upgradation and Surankote due to its declassification from the urban list after 1971, the number of towns in this group has gone up to 25 in 1981 as against 20 in 1971. This is so because of the inclusion of 8 new urban units in this class in 1981—Rehambal as a census town and other seven viz; Achabal, Billawar, Kupwara, Vijaypore, Thana Mandi, Qazigund and Sunderbani having been notified as such by the State Govt. However, the net addition to the population of this size class due to these new towns is too meagre to make any significant improvement in its share of the urban population of the State.

Growth Rate of Population in Individual Towns, 1971—81

A look at the growth rate of individual towns, as given in col. 8 of Table 3, will show that among Class I towns, Srinagar urban agglomeration has recorded a much higher growth rate during the decade 1971—81—42.89% as against 33.38% of Jammu. In the case of class III towns, Udhampur comes at the top (39.95%) followed by Kathua (36.74%), Baramula (28.93%), Anantnag (22.54%) and Sopore (21.23%). As for towns belonging to class IV, Bandipore has registered a phenomenal decadal growth rate of 129.20%.

In striking contrast to this, the other towns which fall in this class, namely Bijbehara, Pampore and Punch, have recorded a growth of 26.79%, 26.29% and 17.86% respectively. Among the class V towns of the State, the growth rate in Ranbirsinghpora is the highest (48.61%). Trailing closely behind are Leh and Mattan with a growth rate of 44.56% and 42.61% respectively, each however falling below the average growth rate of 47.97% for this size-class of towns. Other towns belonging to this size-class trail further behind this average growth rate.

The corresponding growth rate for the group of class VI towns is 49.11%. Only three towns in this group viz.; Uri, Banihal and Lakhenpur with a growth rate of 462.3%, 119.92% and 88.64% respectively far exceed the average growth rate. Chenani is the only town which has registered a negative growth rate of 3.13%.

Rural-Urban Composition of Population

Table 2 presented in this supplement shows the rural and urban composition of population by districts. There are 14 districts in the State among which Jammu is the most populous containing 15.60% of the State's population. Among other districts following in descending order, mention may be made of Srinagar, Baramula and Anantnag, which share 12.11%, 11.24% and 11.00% of the State's population respectively. Udhampur, Doda, Pulwama, Kathua, Badgam, Kupwara, Rajauri and Punch are the other districts with percentage population ranging between 7.60 and 3.74 only. Kargil and Ladakh continue to be the most thinly populated districts having returned a population of 64,566 and 67,733 persons respectively.

Columns 6 and 7 of the table manifest the continued rural preponderance of the State's population, the proportion of urban population being as low as 21%. However some comfort can be drawn from the fact that during the decade the urban component has registered a much faster growth in population than the rural component—45.72% as compared to 25.14% in the case of latter. As a result, the urban component of population has risen from 18.59% in 1971 to 21.00% in 1981.

The districtwise statistics also reveal a higher proportion of urban population in 1981 in all the districts of the state with the exception of Punch which has registered a slight fall. However Srinagar alone has the distinction of being a district with preponderance of urban dwellers to the extent of 80.84% in 1981. But it has attained this position due to bifurcation of Badgam as a separate district. Jammu, on the other hand, has only 29.53% of its population living in its urban areas including the Jammu municipality. The corresponding position in Baramula district is 13.41% followed by Ladakh, Kathua, Badgam and Anantnag with the proportion of urban population being in the neighbourhood of 11%. In the remaining seven districts, the rural component is no less than 90% in each case.

The highest urban growth rate during 1971—81 is revealed by Badgam district at 220.15%. Kupwara comes next with 92.72%. Rajauri also stands out prominently with 77.48%. Other districts notable on this account are Kathua (68.16%) and Pulwama (58.73%). Baramula is at par with the State but in other districts, the corresponding rates are lower.

As regards the rural growth rate, the districts of Rajauri, Punch and Udhampur far exceed the State rate of 25.14%, having returned a growth of 35.87%, 32.73% and 30.54% respectively. Ladakh (28.86%), Baramula (28.52%) and Pulwama (26.35%) are also conspicuous for having returned rural growth rates higher than at the state level. The corresponding position in respect of Anantnag and Kupwara districts is almost at level with the state rate. Among the remaining districts having returned a rural growth rate lower than at the state level, mention may particularly be made of Srinagar which has recorded a fall of 9.66% in its rural population.

Distribution of main workers

Compared to the 1961 and 1971 censuses, information regarding economic activity of the population was collected in more detail in 1981 census. However, the work concept adopted in the 1961 and the 1971 censuses was followed in the present census also which was a distinct departure from the 'income' or 'economic independence' concept of the censuses prior to 1961. But the criterion for classification of workers underwent changes.

At the 1961 census, a person qualified as worker if he had worked regularly during the last season, or if he had worked at least for a day in regular (non-seasonal) work during the preceding fortnight.

At the 1971 census, a worker was defined as a person whose main activity was participation in any economically productive work by his physical or mental activity. The criterion which determined the main activity of an individual was how he engaged himself mostly or in what manner he spent the major portion of his time. The reference period was one week prior to the date of enumeration in the case of regular work such as trade, profession, service or business. In certain types of work such as cultivation, livestock keeping, plantation and household industry, the reference period was the last one year even if the person was not economically active in the week preceding the date of enumeration.

At the 1981 census, a worker was defined as a person who had done any economically productive work during the last one year preceding the date of enumeration. According to this definition, the term worker included all the full-time workers, seasonal workers, part-time workers and even such workers whose contribution to work would generally be considered insignificant. However, the workers were further classified into "main workers" and "marginal workers". Main workers were those who worked for the major part of the year, i.e. six months (183 days) or more. Marginal workers were those who worked for less than six months. Persons who did not participate in any economically productive work were classified as non-workers.

The data given in Table 5 shows that as many as 1,791,035 persons were returned as main workers in the State in 1981. In 1971 census, their number was 1,373,901. Thus the number of workers has increased by 417,134 persons or 30.36% during the last ten years. As a result of this the work participation rate has also gone up, though marginally, from 29.76% in 1971 to 30.08% in 1981. How much of this nominal increase of 0.32% in the work participation rate in 1981 as compared to 1971 is real will be discernible only after deeper probing which will have to await detailed processing of the data.

As between the two sexes, the female participation rate is only 6.48% as compared to male participation rate of 51.31%. The corresponding work participation rates as returned at the 1971 census were 3.86% for females and 52.50% for males.

It is however possible that part of this increase may be attributable to the conceptual interpretation of the term worker in 1971 and 1981. Though, basically a person was classified as worker (1971) or main worker (1981) on, more or less, the same criterion in both the censuses, the basis of such criterion was more specific in 1981 than in 1971. A clear time period of 183 days (six months) was used to determine whether a person was main worker or not in 1981, while at the 1971 census the person was himself required to state whether he spent his time mostly on work (i.e. economic activity) or on any non-economic activity.

The districtwise data yields some interesting results. Kargil has returned the highest work participation rate of 45.39% followed closely by Ladakh with a rate of 44.08%. Badgam, Doda, Baramula and Anantnag also rank slightly above the state average with their work participation rates, ranging between 31.18% and 32.75%. Srinagar and Udhampur districts are very close to the State work participation rate while the remaining six districts fall below this rate. As at the State level, the 1981 work participation rates are higher than the 1971 rates in all the districts except Pulwama, Kupwara, Doda, Rajauri and Punch. Even amongst these districts the disparity is marked in Doda only, having returned a work participation rate of 32.75% in 1981 as compared to 36.09% in 1971.

As regards the work participation rate of males, Srinagar district is again at par with the State rate of 51.31%. Districts which rank higher than the state rate are Ladakh, Badgam, Udhampur, Baramula, Anantnag, Pulwama, Kargil and Kupwara, Ladakh being on the top with a proportion of 56.73% male workers. All other districts have returned male participation rates lower than the state rate.

A comparison of the 1981 male participation rates with those based on 1971 census reveals some decline in all districts except Srinagar, Badgam, Kathua and Jammu. Reverse is, however, the position in respect of female work participation, all the fourteen districts having recorded higher rates as compared to the male work participation rates in 1981, though in many cases they continue to make a dismal reading. Only five districts viz; Kargil, Ladakh, Doda, Anantnag and Udhampur have returned relatively higher participation rates, the more significant amongst them being Kargil and Ladakh which have respectively returned 37% and 30% of their female population as workers. In the other three districts, the corresponding proportions are 13.87%, 7.47% and 6.81% respectively as against the State average of 6.48%.

Main Workers classified by Industrial Categories

The workers have further been classified into four broad industrial categories viz. (1) cultivators, (2) agricultural labourers, (3) household industry workers, and (4) other workers. The category 'other workers' includes workers in forestry, hunting, fishing, mining and quarrying, manufacturing and repairs, electricity, gas and water, construction, wholesale and retail trade, restaurants and hotels, transport, storage and communications, financing, insurance, real estate and business services, community, social and personal services and all public sector and local-self government employees.

Of the total number of 1,791,035 main workers, 1,036,153 or 57.85% have been returned as cultivators, 66,449 or 3.71% as agricultural labourers, 99,544 or 5.56% as working in household industries and 588,890 or 32.88% as other workers. A study of the distribution of workers by the four broad industrial categories reveals a perceptible shift in employment pattern in the State from traditional to modern occupations. The shift is significantly marked in favour of the combined group of "other workers" which

covers a large variety of industrial and tertiary sectors as indicated in the foregoing paragraph. The number of such workers has gone up from about 385,000 in 1971 to 588,890 in 1981, which makes a rise of almost 53%—a welcome feature indeed. Which particular streams of industries and occupations have attracted this shift most will be discernible only after the data has been processed in fuller details. It may not however be wrong to attribute much of this diversification to the tourist industry which has been experiencing a boom since 1974. Many ancillary industries have come up in the process in the handicrafts and horticulture sectors. There has also been a considerable expansion in the last decade in trade and commerce, transport, banking and insurance services and the public sector undertakings which might have contributed their own share.

The primary sector comprising cultivators and agricultural labourers which claimed about 67.83% of the total workers in 1971 now accounts for 61.56% only. There is thus a clear fall of 6.27 % in the labour force engaged in these primary occupations. Employment in Household Industry has however registered a small increase of 1.53% over the last one decade. As against this employment in the residual sector i.e. "Other Workers" has gone up from 28.14% in 1971 to a significant 32.88% in 1981.

The diversification in economic occupations of the working force is evident in almost all the districts of the state though the incidence differs from district to district. In so far as cultivators are concerned, the largest fall to the extent of 16.65% is discernible in Badgam district where this category of workers has gone down from 74.20% in 1971 to 57.55% in 1981. Next follows Baramula with a fall of 11.84% in the proportion of cultivators. The corresponding fall in Punch, Kargil, Kupwara and Pulwama districts ranges between 9.80% and 7.12%. In other districts the decline in the percentages of cultivators is lower than at the State level. The only exception to this trend is Doda district which, on the other hand, has registered an increase of 1.42% in the proportion of cultivators over the last decade.

Agricultural labourers which have recorded a marginal rise in their population in 1981 as compared to 1971 at the state level have at the same time registered a marginal fall in Anantnag, Pulwama, Badgam and Udhampur districts. Among the remaining districts, however, some have recorded a significant rise. Mention may particularly be made of Ladakh which has registered an increase of 5.08% in the proportion of agricultural labourers followed by Punch (3.55%), Kupwara (3.32%) and Doda (1.62%).

As at the State level, the proportion of workers engaged in household industry has increased in five districts viz; Pulwama, Srinagar, Badgam, Baramula and Kargil. The increase is most marked in case of Badgam being of the order of 9.98% followed by Srinagar and Baramula where it is as much as 5.67% and 5.20% respectively. The remaining districts however show a slightly contrary trend, the decline over 1971 being in the range of 0.08% in Rajauri to 2.41% in Kathua.

As regards the omnibus group of 'other workers', all the districts barring Doda go along the trend at the state level, having registered an increase over the 1971 proportions, which in some cases goes as high as 8%. Doda is the only exception which has recorded a fall of 2.49% in the proportion of workers in this category.

Marginal Workers and Non-workers

A special feature of the 1981 census was the adoption of the concept of "marginal workers". A marginal worker was one who had worked any time in the last one year preceding the date of enumeration but for a period of less than six months. For example, a housewife who mainly attended to her household duties might have helped her husband in cultivation or stitched clothes for others in lieu of compensation. If she worked on these occupations for less than six months in the year preceding the date of enumeration, she was considered a marginal worker. This is an innovation of the 1981 Census and therefore details of the workers of comparative status are not available for the previous censuses.

The other component of the population is the non-workers. This population has as usual been classified into the following seven categories :—

1. *Household duties*
2. *Students*
3. *Dependents*
4. *Retired persons or rentiers*
5. *Beggars, etc.*
6. *Inmates of institutions*
7. *Other non-workers*

A break-up of non-workres by these categories will be available only when the computerised tables are ready. For the present it should be of interest to know the number and percentages of main workers, marginal workers and non-workers to the total population in the State and its districts. This is given in the following table :—

NUMBER AND PERCENTAGES OF MAIN WORKERS, MARGINAL WORKERS AND NON-WORKERS IN THE STATE AND DISTRICTS, 1981

State/District	Total population	Number of		
		Main workers	Marginal workers	Non-workers
1	2	3	4	5
JAMMU & KASHMIR* ..	**5,954,010 (100.00)**	**1,791,035 (30.08)**	**798,892 (13.42)**	**3,364,083 (56.50)**
Anantnag	654,945 (100.00)	206,386 (31.51)	68,562 (10.47)	379,997 (58.02)
Pulwama	404,351 (100.00)	117,228 (28.99)	86,473 (21.39)	200,650 (49.62)
Srinagar	721,078 (100.00)	216,932 (30.08)	33,727 (4.68)	470,419 (65.24)
Badgam	352,759 (100.00)	116,050 (32.90)	57,881 (16.41)	178,828 (50.69)
Baramula	669,405 (100.00)	208,708 (31.18)	93,627 (13.99)	367,070 (54.83)
Kupwara	327,552 (100.00)	98,172 (29.97)	61,397 (18.75)	167,983 (51.28)
Kargil	64,566 (100.00)	29,305 (45.39)	5,801 (8.98)	29,460 (45.63)
Ladakh	67,733 (100.00)	29,856 (44.08)	3,713 (5.48)	34,164 (50.44)
Doda	424,390 (100.00)	139,007 (32.75)	40,771 (9.61)	244,612 (57.64)
Udhampur	452,244 (100.00)	144,015 (31.84)	97,737 (21.61)	210,492 (46.55)
Kathua	365,029 (100.00)	103,925 (28.47)	54,855 (15.03)	206,249 (56.50)
Jammu	928,638 (100.00)	241,374 (25.99)	108,812 (11.72)	578,452 (62.29)
Rajauri	298,830 (100.00)	82,147 (27.49)	43,249 (14.47)	173,434 (58.04)
Punch	222,490 (100.00)	57,930 (26.04)	42,287 (19.01)	122,273 (54.95)

*The population figures exclude population of areas under unlawful occupation of Pakistan and China where census could not be taken.

Note:—Figures within brackets indicate percentages to total population.

It will be seen that besides main workers, who constitute 30.08% of a total of 5,954,010 persons in habiting the State in 1981, as many as 798,892 persons constituting 13.42% of the total population have returned themselves as marginal workers. These consist of such elements of population as are primarily non-workers like house-wives and students whose most of the time is spent in household activities or studies, but who nevertheless participate in some economic activity in their spare time. Putting these two categories of workers together, it is thus evident that the economically active population including those whose contribution to the economy might be marginal or insignificant do not constitute more than 43.50% of the total population; the other 56.50% being absolute non-workers. The incidence of marginal workers is much higher in the districts of Udhampur, Pulwama, Punch, Kupwara, Badgam and Kathua, ranging between 21.61% and 15.03%. Srinagar district, however, falls on the other extreme having returned a very low proportion of 4.68% marginal workers.

It is also significant to note that the districts of Srinagar and Jammu have returned a much higher incidence of non-workers, the respective proportions being of the order of 65.24% and 62.29%. Anantnag and Doda follow with a proportion of 58.02% and 57.64% respectively. On the contrary, Kargil, Udhampur and Badgam are the three districts where the percentages of non-workers is far less, being of the order of 45.63%, 46.55% and 50.69% respectively. Other districts correspond closely with the State average.

Primary Census Abstract

The Primary Census Abstract appears as last of the tables in two parts. Part-I gives the sexwise population and literacy, besides such indices as the sex-ratio and decadal growth rate of population during 1971—81 by rural-urban break-up down to the level of each district, tehsil, town, city and urban agglomeration. In the absence of final area figures at each of these levels, however, the density of population has not been worked out.

Part II of the Primary Census Abstract gives sexwise data about main workers, further classified into four categories *viz*; (I) cultivators, (II) agricultural labourers, (III) household industry [industrial category V (*a*) and (IV)] other workers consisting of those engaged in livestock, forestry, fishing, hunting and plantations, orchards and allied activities, mining and quarrying, manufacturing, processing, servicing and repairs other than household industry, construction, trade and commerce, transport, storage and communication and other services. It also gives sexwise statistics about marginal and non-workers. The data is given separately for total, rural and urban areas for the State, districts, tehsils, towns, cities and urban agglomerations. The reader may find these details of immense interest.

Physically Handicapped Population

Table 7 gives the number of physically handicapped persons for the State and its districts. The data was collected as part of the Houselist schedule canvassed during the Houselisting Operations carried out in 1980 and related only to normal residents residing in census houses. As revealed by the table, the number of totally handicapped persons returned for the State as a whole is 13,795 persons. Of these, totally crippled constitute 36.38%, totally dumb 35.41% and totally blind 28.21%. Down at the district level, it will be observed that Doda with a handicapped population of 1,729 persons suffers the highest incidence in relation to its total population in which it ranks sixth among other districts. Next follows Anantnag with a number of 1,695 handicapped persons though in total population it ranks fourth among the districts. On the other hand, Jammu, the most populous district of the State has returned only 1,347 persons as totally handicapped. The following statement brings out the position in respect of each district more clearly :

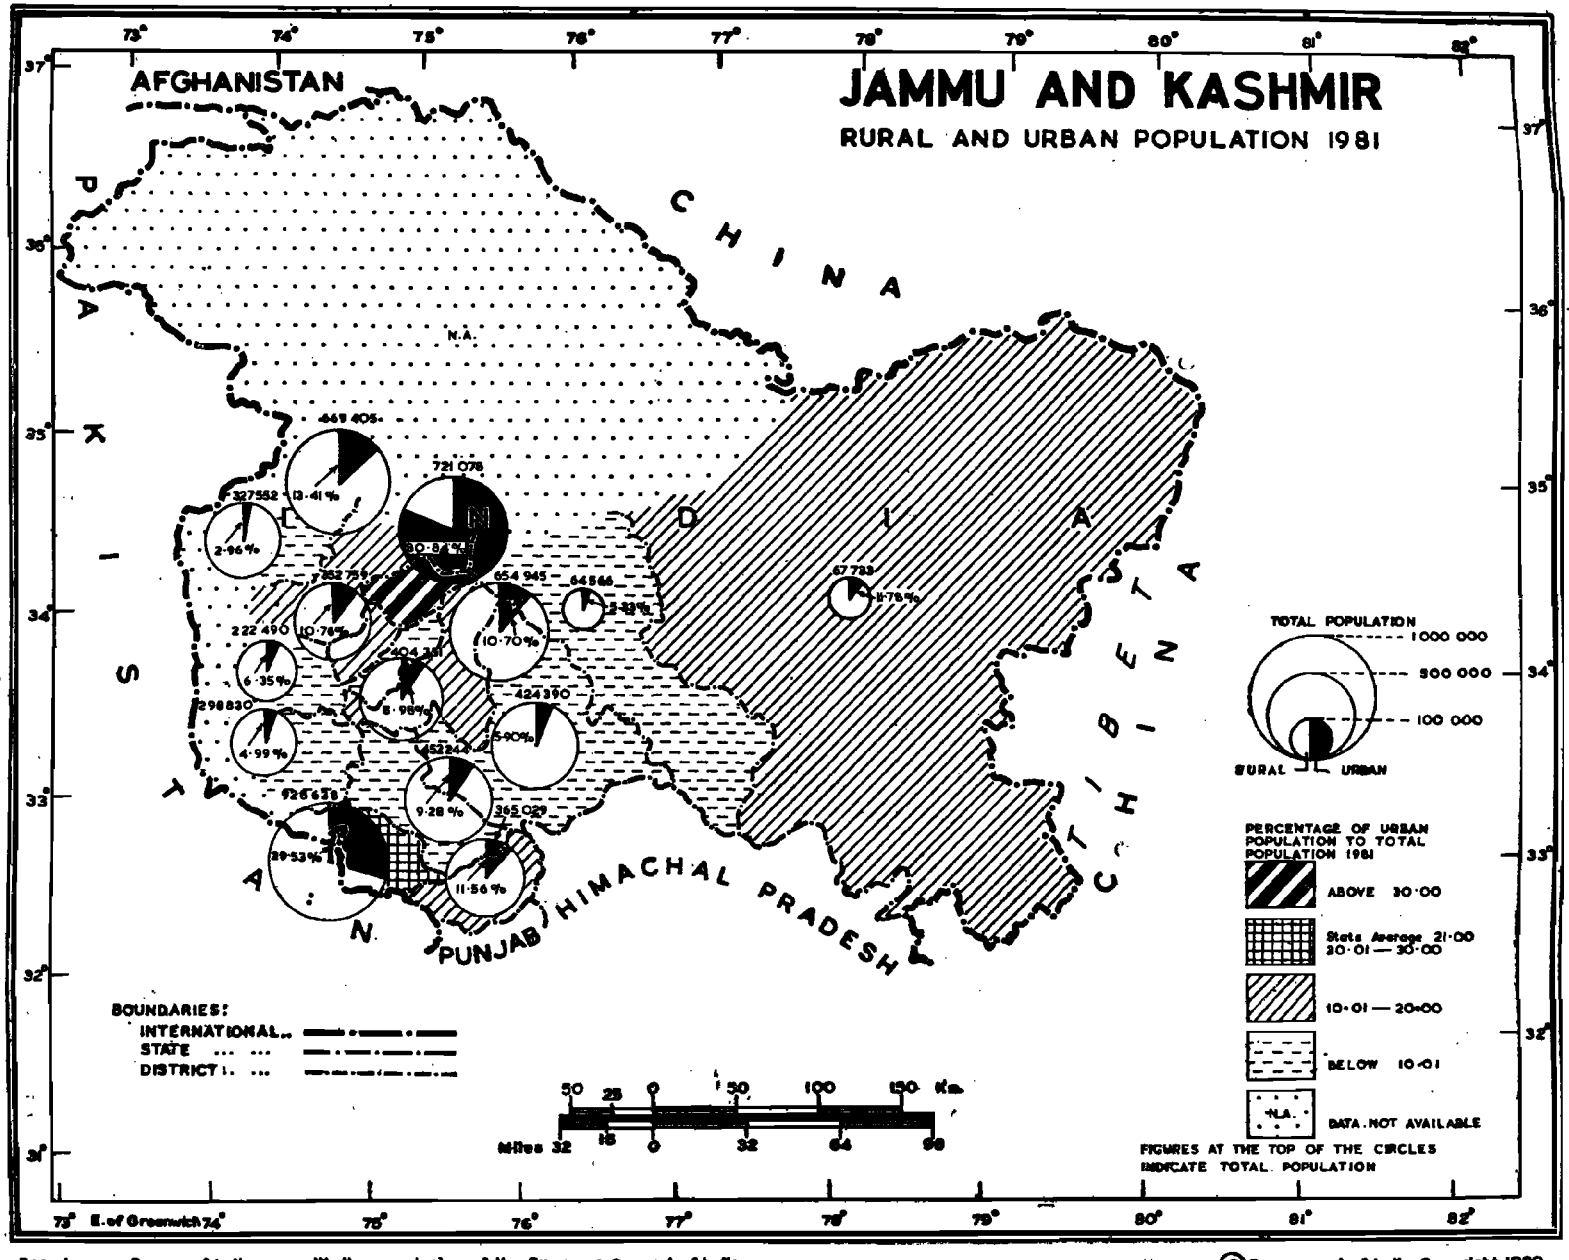

NUMBER AND PERCENTAGE OF PHYSICALLY HANDICAPPED PERSONS IN THE DISTRICTS OF THE STATE

Areas in descending order of physically handicapped persons		Percentage to physically handicapped persons		
District	Number	Totally blind	Totally crippled	Totally dumb
1	2	3	4	5
1. Doda	1,729	24.87	29.27	45.86
2. Anantnag	1,695	26.37	39.12	34.51
3. Baramula	1,544	27.14	34.97	37.89
4. Jammu	1,347	29.25	39.20	31.55
5. Srinagar	1,036	22.97	41.99	35.04
6. Pulwama	965	24.46	38.34	37.20
7. Kupwara	865	26.47	35.95	37.58
8. Udhampur	865	30.98	30.17	38.85
9. Kathua	838	31.50	34.61	33.89
10. Badgam	814	22.73	43.61	33.66
11. Rajauri	808	33.17	41.71	25.12
12. Punch	630	33.17	40.32	26.51
13. Ladakh	352	50.00	20.74	29.26
14. Kargil	307	41.69	31.27	27.04
Total ..	**13,795***	**28.21**	**36.38**	**35.41**

*The population figures exclude population of areas under unlawful occupation of Pakistan and China where census could not be taken.

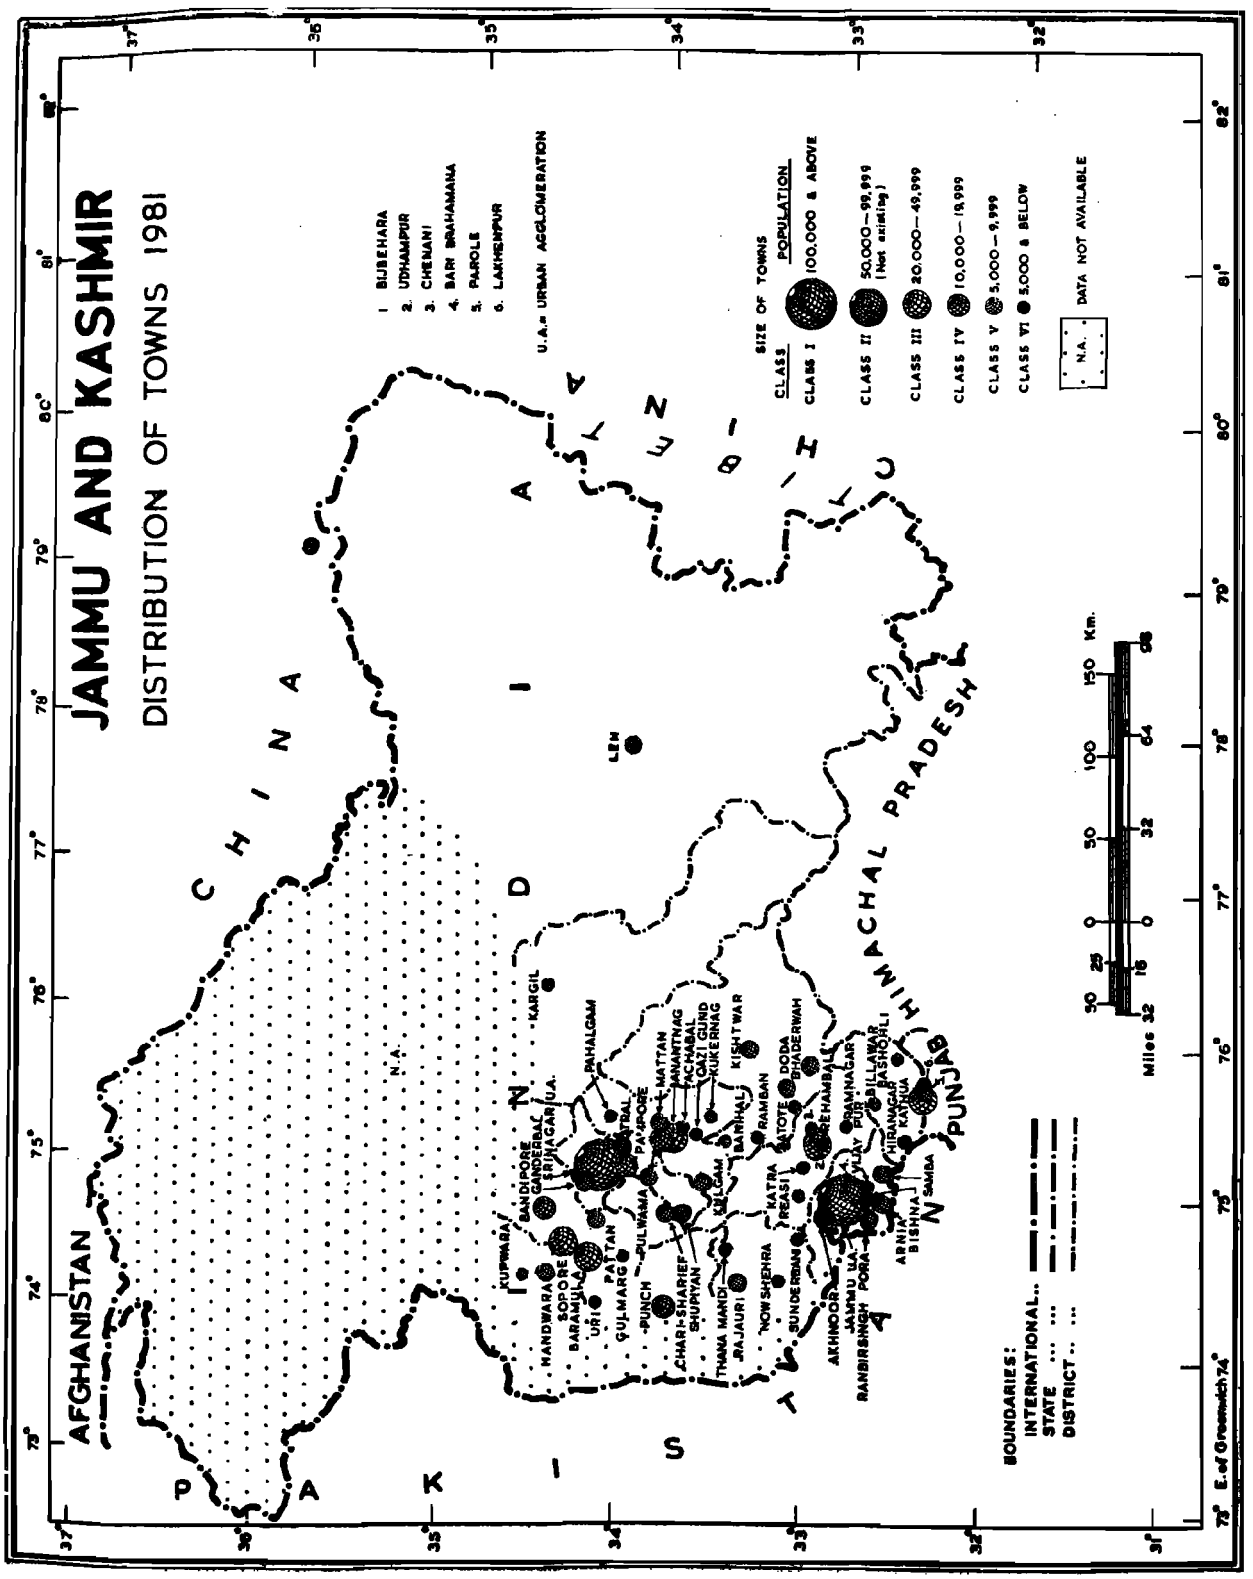

The break-up of handicapped persons by categories of disability reveals that as in the case of the State as a whole, the 'totally crippled' persons comprise the largest group in most of the districts of the State namely Anantnag, Pulwama, Srinagar, Badgam, Kathua, Jammu, Rajauri and Punch. "Totally dumb" constitutes the 2nd largest category of handicapped persons in all these districts except Rajauri and Punch where "totally blind" take this position. In Kargil and Ladakh districts, it is the "totally blind" who constitute the predominant category.

8. The following abbreviations have been used for the status of a town :

   (i) M.C.—Municipal Committee

   (ii) Cantt.—Cantonment

   (iii) T.A.—Town Area

   (iv) N.A.—Notified Area

9. The population figures exclude Population of areas under unlawful occupation of Pakistan and China where census could not be taken.

LIST OF OFFICIALS ASSOCIATED WITH THE PUBLICATION OF SUPPLEMENT TO PAPER 1—PROJECT

Compilation

Sh. B.L. Tiku, Investigator

Sh. Mohd. Amin, Tabulation Officer

Sh. Mohd. Yousuf, Tabulation Officer

Sh. G.A. Beig, Statistical Assistant

Sh. Gulam Mohd. Bhat, Statistical Assistant

Sh. G.M. Ganai, Statistical Assistant

Sh. Roshan Lal Koul, Statistical Assistant

Sh. G.M. Din Kalloo, Statistical Assistant

Sh. V.K. Chehra, Computor

Sh. M.L. Jotshi, Assistant Compiler

Sh. Gulam Hassan Wani, Assistant Compiler

Sh. A.R. Malik, Assistant Compiler

Mapping

Sh. Masood Ahmad, Cartographer

Sh. A.M. Shagoo, Artist

Sh. Basharat Ahmad, Statistical Assistant

Sh. Vijay Punjabi, Draughtsman

Sh. Abdul Qayoom, Draughtsman

Proof Reading

Shri V.K. Chehra, *Computor*

Shri M.L. Jotshi, *Assistant Compiler*

Typing

Sh. Mohd. Ramzan, Lower Division Clerk
