CENSUS OF INDIA

PUBLICATION PROGRAMME

TAMIL NADU

(Series 19 relates to Tamil Nadu only. Under this series, the following publications are issued)

Portrait of Population	: A descriptive Analysis of '71 Census data
Part I-A	: General Report (First Part)
part I-B	: General Report (Second Part)
Part I-C	: Subsidiary Tables
*Part II-A	: General Population Tables (A series)
*Part II-A Supplement	: General Population Tables (Standard Urban Areas)
*Part II-B (i)	: General Economic Tables (B-I Part A and B-II)
Part II-B (ii)	: General Economic Tables (B-I Part B & B-III & B-IV)
Part II-B (iii)	: General Economic Tables (B-V to B-IX)
*Part II-C (i)	: Social and Cultural Tables (Tables C-VII and C-VIII)
**Part II-C (ii)	: Social Cultural and Fertility (Tables Except Table C-VII and C-VIII)
Part II-D	: Migration Tables
*Part III-A	: Report on Establishments
*Part III-B	: Establishments Tables
*Part IV	: Housing Report and Tables
*Part V-A	: Special Tables for Scheduled Castes and Scheduled Tribes
Part V-B	: Ethnographic Notes on Scheduled Castes and Scheduled Tribes
Part VI-A	: Town Directory
Part VI-B	: Special Survey Report on Selected Towns
Part VI-C	: Survey Report on Selected Villages
*Part VIII-A & B	: Administration Report on Enumeration & Tabulation (for official use only)
Part IX	: Census Atlas
*Part IX-A	: Administrative Atlas (Two Volumes)
Part X	: District Census Hand Books
*A	: Village and Town Directory
*B	: Village and Town-wise Primary Census Abstract
C	: Analytical Report, Administrative Statements and District Census Tables Special Studies and other Miscellaneous Reports

ALL INDIA PUBLICATIONS

Volumes similar to those indicated above are being published at the All India level. Apart from these All India Census Tables on 1 % sample basis, as Part-II (Special) and a special Report on Graduates and Technical personnel as Part VII have been published.

---

*Already published **Present publication

PREFACE

The present publication contains six tables (C series) relating to social and cultural characteristics of the population of Tamil Nadu and also five fertility tables (F series) compiled from the data gathered at the 1971 Census. The two other tables on social and cultural aspects, namely, C-VII on religion and C-VIII (Parts A and B) on scheduled castes and scheduled tribes have already been published in another volume entitled Part II C(i). The tables on social and cultural aspects give information on the family composition of households, age and marital status, age, sex and education, single year age returns, mother-tongue languages and bilingualism. The fertility tables have been compiled for the first time in this Census and they present a variety of information on present age, age at marriage, duration of marriage, children born during the last one year, religion, age and education of currently married women. It is hoped that the data presented in these tables would help in a proper appreciation of the social and demographic characteristics of the population of Tamil Nadu and be useful to the research scientists. administrators and planners for drawing up schemes for welfare measures of the population.

I was ably assisted in the compilation of the tables, scrutiny and arrangement of the materials, presented in this volume by Sarvasri T.V. Srinivasan, I.A.S., and M. Thangaraju, Deputy Directors and Sri M. Panchapakesan, Assistant Director of Census Operations. Sri S.Packiaraj, Tabulation Officer, and his team consisting of S/Sri R. Srinivasan, Research Assistant, K. Sridharan, T. Prakash Thomas and Smt. N.E. Ramani, Assistant Compilers did the initial compilation of the tables. Sri R. Narayanan, Tabulation Officer assisted by Smt. B. Jayalakshmi, Statistical Assistant, Sri R. Lakshminarayanan, Research Assistant, Sri M.G. Nagaraj, Computor, Kum. V. Santha, Asst. Compiler, Smt. B. Rajeswari and Smt. V. Lalitha, Lower Division Clerks attended to the finalisation of the tables and prepared the manuscripts for printing. I appreciate the able assistance and co-operation extended to me by the officers and staff above mentioned in bringing out this publication.

I also wish to express my thanks to Sri R.B. Chari, I.A.S., former Registrar General, India for his help in bringing out the Census publications quickly and to Sri K.K. Chakravorty, Assistant Registrar General (Census) and his staff for the early clearance of the statistical tables published now.

Lastly, I would like to thank the Manager, Govt. of India Press, Nilokheri and his staff for the co-operation and help rendered in ensuring quick printing of this book.

PRELIMINARY NOTE

The present volume contains six of the Social and Cultural tables (C-series) and the five Fertility tables (F-series) relating to Tamil Nadu compiled from the data collected in the 1971 Census. Two tables of the C-series namely C-VII on Religion and C-VIII on Scheduled Castes and Scheduled Tribes are presented in a separate publication entitled Part II C (i).

The tables presented in this Volume are given below.

C-series—Social and Cultural Tables

C-I Part A	Members of households by relationship to head of household classified by age-groups.
C-I Part B(i)	Households where the head is a *male* by relationship of members with the head.
C-I Part B(ii)	Households where the head is a *female* by relationship of members with the head.
C-II	Age and marital status
C-III Part A	Age, sex and education in *all* areas only.
C-III Part B	Age, sex and education in *urban* areas only.
C-IV	Single year age returns
C-V Part A	Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India.
C-V Part B	Speakers of languages/mother-tongues (inclusive of mother-tongues where grouped) other than those specified in Schedule VIII to the Constitution of India.
C-VI	Bilingualism

F series—Fertility Tables

F-I	Distribution of currently married women and the related births during the last year by religion, present age and age at marriage.
F-II	Distribution of currently married women and the related births during the last year by education, present age and age at marriage.
F-III	Distribution of currently married women and the related births during the last year by religion, duration of marriage and age at marriage.
F-IV	Distribution of currently married women and the related births during the last year by education, duration of marriage and age at marriage.
F-V	Distribution of currently married women and the related births during the last year by religion, education groups, present age and age at marriage of the women.

The tables mentioned above except Table C-I have been prepared from the answers recorded in the "Individual Slip." Table C-I relating to the composition of households was prepared from the information recorded in the "Population Record" for each household which itself was compiled from the individual slips.

Questions 3, 4, 5, 6, 10, 11, 12, 13, 14 and 15 of the individual slip relate to sex, age, marital status, age at marriage, fertility for currently married women, religion, scheduled castes and tribes, literacy, educational level, mother-tongue and other languages. An extract of the instructions issued to the enumerators for recording answers to these questions are given in Annexure I to this note.

All the tables except Table C-I have been prepared initially on sample basis and later estimated for the total. Sample selected was 10% for rural areas and 20% for urban areas In the case of Table C-I compiled from population record, the sample was 4%. The methodology followed for estimation from the sampled figures are given in Annexure-II to this note.

ANNEXURE I

Instructions to enumerators for eliciting information on questions relating to age, marital status etc.

Question 1: Name

30. Write the name of the person enumerated. If a woman's name is not given out, describe her as 'so and so's wife, mother or daughter'. By custom if a woman finds it difficult to give the name of her husband and if the man is absent at the time of enumeration but his particulars have to be recorded, write 'so-and so's husband' if you have failed to ascertain the name even from the neighbours.

For newly born infants who have not yet been given the name write "baby" and add father's or mother's name.

Question 2 : Relationship to Head

31. In the case of the Head of the household write 'Head'. The Head of the Household for census purposes is a person who is recognised as such in the household. He is generally the person who bears the chief responsibility for the maintenance of the household and takes decisions on behalf of the household. The Head of the household need not necessarily be the eldest male member, but may even be a female or a younger member of either sex. You need not enter into any long argument about it but record the name of the person who is recognised by the Household as its Head.

32. In the case of institutions like boarding houses, messes or friends living together in one census house, which should be regarded as households of unrelated persons living together, which may be called institutional Households, the Manager or Superintendent or the person who has administrative responsibility or who by common consent is regarded as the head should be recorded as the Head of the household.

33. The Manager or Superintendent who does not stay normally in the institution should be enumerated at his place of normal residence. You should make sure before filling up the slip for the Manager or Superintendent etc. of an institutional household, that he/she has not been enumerated at any other household.

34. In the case of absence of a normal 'Head', the person on whom the responsibility of managing the affairs of the household falls, should be regarded as the Head.

35. All relationships in this question should be recorded in relation to the Head of the household. Write the relationship in full. Do not use words like 'nephew, niece or uncle', but state whether brother's or sister's son or daughter (for nephew or niece) or father's or mother's brother (for uncle), 'Son' will include 'adopted son' or 'step son'; similarly for a daughter. In the case of visitors, boarders or employees, write 'visitor', 'boarder' or 'employee' as the case may be. In the case of institution, the members should be recorded as 'unrelated'.

36. If on the check of revisional round between 1st and 3rd March 1971 the Head of the household as recorded previously is found to have died, the person in the household who succeeds him by common consent as head should be recorded as Head and the relationships in all other slips will have to be suitably corrected. The slip of the deceased Head of the household will, of course, be cancelled.

Question 3 : Sex

37. For males write 'M' and for females write 'F' within the circle indicated against this question. Even for eunuchs and hermaphrodites, write 'M' only. Verify with reference to the name and relationship to Head against questions 1 and 2 respectively that you have noted the sex correctly.

Question 4 : Age

38. Record the age of the person in total years completed last birthday. Very often there is a tendency on the part of the individuals to return 'years running' rather than the years completed'. Make sure that only the actual number of years completed is recorded.

39. In respect of infants who might not have completed one year by the day of enumeration, their age in completed years should be invariably shown as '0' as they have not yet completed one year of age and add 'Infant' in brackets. As was stated under general instructions make sure that infants even if a day old are invariably enumerated. You

should not enter the age in months. The age of an infant who has not yet completed one year should invariably be noted as '0' only.

40. Age is one of the most important items of demographic data and you should ascertain the age with greatest care. Many persons particularly in the rural areas cannot give their age correctly. They should be assisted to state the correct age by stimulating their memory with reference to any historical event etc., well known in the area. Sometimes the age can be ascertained with reference to the age of another person of a known age that may be in the same household or in the neighbouring household or that of a well known person of the village such as Headman of the village. A person can more easily say whether he was older or younger to such a person and by how many years. This will help you to record the age more accurately.

Question 5 ; Marital Status

41. In answering this question use the following abbreviations :

NM : Never Married
M : Currently Married
W : Widowed
S : Separated or Divorced

42. For a person who has never been married at any time before, write 'NM'. For a person currently married, whether for the first or another time and whose marriage is subsisting at the time of enumeration with the spouse living, write 'M'. Write 'M' also for persons who are recognised by custom or society as married and for the persons in stable *de facto* union. Even if a marriage is disputed in the locality write 'M' if the person concerned says he or she is married or is in stable *de facto* union. For a widowed person whose husband or wife is dead, and who has not been married again, write 'W'. For a person who has been separated from wife or husband and is living apart with no apparent intention of living together again or who has been divorced either by a decree of a law court or by an accepted social or religious custom but who has not remarried, write 'S'. For a prostitute return her marital status as declared by her.

Question 6 : For currently married women only

43. This question has to be answered in respect of all currently married women only *i.e.*, all women whose marital status is shown as 'M' against Q. 5. For all others a cross may be put through the two sub-parts of this question.

6. (*a*) Age at marriage

44. *Age at marriage* : You should ascertain the age at which the currently married woman whom you are enumerating was married and record that age in completed years. If the currently married woman had been married more than once, the age at which she got married for the first time should be recorded.

6. (b) Any child born in the last one year

45. *Any child born in the last one year* : You should ascertain if the currently married woman whom you are enumerating gave birth to a child in the last one year prior to the date of enumeration. Since it may be difficult for a person to reckon the exact year with reference to the English calendar dates, the period of one year may be ascertained with reference to a well known festival day which falls close to Feb-March as determined by the Census Superintendent of the State. You should ask if a child was born on or after this festival day last year to the date of enumeration. Only if the child was born alive, even if the child had died soon after birth, should the answer be 'Yes', to this question. Still birth, *i.e.*, a child which is born dead should not be taken into account for this purpose. So while you should make sure that every case of birth of child born alive, even if it is not alive on the date of enumeration, is reported, you should not reckon it if the child was born lifeless.

46. It is common experience that the birth of the child may not be reported readily if the child is not actually surviving at the time of enumeration. Infant deaths are still high in the country. There is a chance of a number of such cases being missed unless specifically questioned about them. It is necessary to record all live births even if the child had died soon thereafter or had not survived to the day of enumeration. Therefore where the initial answer to this question is 'no', you should ask a specific question if there has been a case of child having been born alive in the last one year and later dying before the enumeration date. This is a delicate question and should be asked with tact in a manner not to offend the sensibility of the respondent. Where a currently married woman first answers that she had no child born in the last one year, you may perhaps question her as follows :

"It has been found in some houses that a child was born and had died soon after or a few days or

months later and such cases had not been reported. It is my hope that there are no such cases here. Am I right ?"

This may bring in the required response. If she reports 'no' then you can be sure that no birth has been missed. You have to make sure that any live birth that has occurred to the currently married woman in the last one year is netted whether the child is surviving till the date of enumeration or not. Similarly, probe to eliminate still births may be necessary. For example, when the answer is 'yes' under question 6(b) the enumerator might ask if the child is here in this house. If the answer is 'yes', no further question is needed. If 'no', the enumerator might ask where he has gone. The answer may be 'dead' or he has gone elsewhere. If 'dead' then the enumerator might ask when did the child die and this will bring out the fact whether or not it was a still birth.

47. Write 'Yes', if the currently married woman had given birth to a live child from the prescribed festival day last year to the date of enumeration or 'no' if she had not. In case of twin or multiple births, write 2, 3, etc., as the case may be within round brackets after the entry 'Yes'.

Note:—You may find on your revisional round from 1st to 3rd March, 1971 that a child is born to a married woman in a household after your last visit but before the sunrise of 1st March, 1971. You will have to take this into account and correct the answer against the Q. 6 (b) accordingly. You must enquire specifically if any such birth has taken place. While ignoring still births all other births where the child was born alive even if it did not survive long should be taken into account.

Question 12: Literacy (L or O)

67. *Definition of a literate* : A person who can both read and write with understanding in any language is to be taken as literate. A person who can merely read but cannot write is not a literate.

68. It is not necessary that a person who is literate should have received any formal education or should have passed any minimum educational standard.

69. For a person who is literate *i.e.*, who can both read and write, record 'L' in the triangle against question 12. If there is any doubt about a person's ability to read or write, the test that may be applied for reading is his/her ability to read any portion of the printed matter in the Enumerator's Instructions and similarly for writing he/she should be able to write a simple letter. Ability merely to sign one's name is not adequate to quality a person as being able to write with understanding. If a person claims to be literate in some other language with which the enumerator is not acquainted, the respondent's word has to be taken as correct. Other members of the household may also be able to testify to the literacy of the person enumerated.

70. For a person who is illiterate *i.e.* who can neither read nor write or can merely read but cannot write, in any language, write 'O' in the triangle against question 12. All children of the age of 4 years or less should be treated as illiterate even if the child is going to a school and may have picked up reading and writing a few odd words.

Question 13: Educational level

71. This question will be asked of those for whom 'L' has been recorded against question 12. For a person who is illiterate and 'O' has been put against him in the answer to question 12, there is no advantage in ascertaining the educational level even if he had at some stage attended school and passed a standard and had relapsed into illiteracy. In such a case you should put 'X'. You have to ascertain and record the highest educational level attained by a person for whom 'L' is recorded in answer to question 12.

72. For a person who is still studying in a particular class, the highest educational level attained by him will be one that he has actually passed and not the one in which he is studying. For example, a person studying in 1st year B.A. should be recorded as only 'PUC' or 'Higher Secondary', as the case may be. Similarly, a person studying, say, in the 4th year of 'MBBS' should not be noted as 'MBBS' but as 3rd year 'MBBS' which is the highest level he has actually attained. If you are not sure whether a person has passed Primary, Middle, Higher Secondary or other definite levels, you may record the actual standard passed such as say IIIrd standard, VIIIth standard, 1st year B. Com. etc.

The highest educational level attained by the person enumerated should be recorded. When a person holds both general and technical qualifications both of which are of equivalent level such as say B.Sc. (Zoology) and M.B.B.S. or B.A. (Maths.)

and B.E. (Bachelor in Engineering), the technical qualification should be given preference in recording the highest educational level attained. Where the general educational level is higher than the technical educational level or where it is not possible to decide which of the two levels is relatively higher, the highest level of education as returned by the person concerned should be recorded.

In recording the highest educational level of a graduate or a post-graduate, subject of specialisation such as B.Sc. (Maths.), M.A. (Economics), M.Sc. (Botany), B.Sc. (Agriculture), etc., should be noted. You should not use abbreviations which are not in common use. In such cases, the degree or diploma should be spelt out fully.

73. Whenever you come across graduates or post-graduates as also those with a technical diploma or degree, you will have to issue him a "Degree-holder and Technical Personnel Card" and ask the person concerned to fill it. You should note the location code on the card while issuing it. Put a tick (v) after noting the educational level against question 13 immediately after you issue a card. When you collect it after sometime but before you complete the enumeration of your area, cross the tick and put a circle as (√).

You will have to ensure that the card issued to all the graduates and the technical degree or diploma holders are collected back. The non-crossed tick, if any, against question 13 will show that the card has not been collected.

ANNEXURE II

A note on the sampling procedure adopted in the 1971 census for social, cultural and fertility tables (except C-I & C-V)

Sample size : A ten per cent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a tehsil/anchal/police station. In the urban part of the district, a twenty per cent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection procedure : The sample design adopted in the 1971 census was a stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions : (1) Tehsil/anchal/police station (rural); (2) Non-city urban district and (3) City (urban unit with 100,000 and more population).

These sub-regions were termed as operational units. If, however, any of the operational unit was unduly large, it was split into sub-operational units of at least 20,000 persons. Similarly, small-sized aperational units were either clubbed together or tagged on to a contiguous larger unit so as to form an "effective operational unit, of the required minimum size. Adoption of these operational units ensured accuracy in sample selection, maintaining at the same time stability in the sampling fraction within the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the purpose of the primary census abstract (PCA) the individual slips were sorted into ten broad industrial categories and nine broad age-groups for each of the sexes. The ten industrial categories of workers and non-workers were as follows : (I) Cultivators; (II) Agricultural labourers; (III) Livestock, forestry, fishing, hunting and plantations, orchards & allied activities; (IV) Mining & quarrying; (V-a) Manufacturing, processing, servicing & repairs in *household industry*; (V-b) Manufacturing, processing, servicing & repairs in *other than household industry*; (VI) Construction; (VII) Trade & commerce; (VIII) Transport, storage & communications; (IX) Other services and (X) Non-workers.

The nine age groups into which the slips belonging to each industrial category were sorted were 0-14, 15-19, 20-24, 25-29, 30-39, 40-49, 50-59, 60+ and 'age not stated'. Thus the individual slips of a particular operational unit were sorted into $11 \times 9 = 99$ cells, separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon-holes for rural/urban samples and one pigeon-hole was selected at random. The slips falling in the selected pigeon-hole constituted the sample. For operational details of the sampling procedure and instructions, the 'Manual of instructions on sorting, compilation (manual processing) & sampling procedures' may be consulted. All tables except A-I to A-V (Pop. tables), B-I Part A & B II (economic tables), C-V (mother-tongue), C-VII (Religion) and C-VIII (scheduled castes & tribes) have been prepared on a sample basis.

Estimation procedure : The tables prepared for each of the districts/states from the ten per cent rural and twenty per cent urban sample slips have been inflated to give the final estimated tables. Estimates have been obtained by making use of the cell frequencies (usually labelled as 'controls') available from the tables prepared on full count basis, namely, PCA and B-I Part A. In order to ensure the maximum possible inter-table consistency, it became necessary to use the estimated frequencies of a few of the final tables as controls for estimating some cell frequencies of other tables.

This way of estimating the cell frequencies ensured that marginal totals of estimated tables tallied with that of the full-count tables. This is convenient to the user because, after adjustment, the identical marginal totals are found in tables having the same marginal specification. "The adjustment diminishes the sampling variance to some extent; the more the controls, the smaller the sampling variance of the adjusted frequencies"[1]. Further,

adjustment to known control totals has at the same time the effect of eliminating biases in the nature of inherent differences between the sample and complete count.

For the purpose of estimation of final tables, a set of multipliers was prepared for each table. A multiplier is the ratio of full-count frequency of some characteristics from PCA or Table B-I Part A and the corresponding sample frequency of the same characteristics from the sample table. The following statement gives the level of presentation of the tables and the related controls on which the multipliers are based. The details will be presented in the report on sampling procedures to be published later :—

Table	*Level of presentation*	*Control based from tables*
C II	District	B I Pt. A & PCA
C III A	-do-	,, ,,
C III B	-do-	,, ,,
C IV	State	,, ,,
C IV App.	District	,, ,,

As no such control was readily available for C VI (bilingualism), these were estimated by multiplying the sample values by 10 and 5 in rural and urban areas respectively.

All the tables, F-I to F-V are presented at state level. The sample tables F-I to F-V have been multiplied by ten in case of rural areas and by five in case of urban areas to estimate the final tables.

Reliability of estimates : No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of simple random sampling, as $\sqrt{(1-f)\ \frac{1-p}{np}}$ where 'f' is the proportion samples, (0.10 in case of rural areas & 0.20 in case of urban areas); 'p' is the estimated proportion in any cell and 'n' the sample size being equal to ten per cent of individual slips in rural areas and twenty per cent in urban areas. In the present census, slips were sorted by sex, industrial category and age-group before sampling. It is expected that the efficiency must be considerably higher than a simple random sample of identical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling especially when the slips were pre-sorted for most of the socio-economic characteristics covered in a census[2]. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable.

1. **Deming**, W.E. Statistical adjustment of data Ch. VII.
2. **Labiri**, D.B. "An experimental approach on the basis of census enumeration slips". Studies in population sampling, Vol. 1.

A note on the sampling procedure adopted in 1971 census for C-I Part A, C-I Part B(i) and C-I Part B(ii)

Sample size : For the preparation of tables C-I Part A, C-I Part B (i) and C-I Part B (ii) on household composition, a sample of residential households was drawn in two stages. In the first stage, a twenty per cent systematic sample of effective enumeration blocks (defined later) was selected systematically. In the second stage, a twenty per cent sample of population records relating to residential households was selected from each of the sample block, again systematically.

Selection procedure : For the purpose of sample selection, the rural and urban parts of each district were treated as separate strata. Within each stratum, a list of blocks was prepared by merging those containing less than 50 households with the neighbouring blocks. Blocks formed in this way were called 'effective enumeration blocks' or simply 'effective blocks'. The list of effective blocks so formed served as a frame for the selection of the first stage unit. A twenty per cent sample of effective blocks was then selected systematically. Having identified the first stage units, the population record books for the selected effective blocks were assembled. Within each selected effective block, the population records relating to residential households were serially numbered. To do this effectively, instructions were issued to fold the population record relating to 'houseless households or institutional households'. Care was also taken to see that only one serial number was assigned to a population record, whenever the record relating to a household covered more than one page. In cases where 'effective blocks' were formed by merging two or more blocks, the population record books corresponding to all the census enumeration blocks constituting the effective block, were assembled together and then the households were selected. Fresh random numbers were selected for each effective block. The population records corresponding to the selected households were marked 'S' at the right hand top corner with a stamp provided.

Estimation procedure : The tables prepared for each of the stratum were multiplied uniformally by 25 to give the final estimated table.

C—SOCIAL AND CULTURAL TABLES

(Tables C-I to C-VI)

TABLE C-I

PART A
Members of households by relationship to head of household classified by age-groups

PART B (i)
Households where the head is a male by relationship of members with the head

PART B (ii)
Households where the head is a female by relationship of members with the head

C-I PART A — MEMBERS OF HOUSEHOLDS BY RELATIONSHIP TO HEAD OF HOUSEHOLDS CLASSIFIED BY AGE-GROUPS

C-I PART B (i) — HOUSEHOLDS WHERE THE HEAD IS A MALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD

C-I PART B (ii) — HOUSEHOLDS WHERE THE HEAD IS A FEMALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD

FLY LEAF

The composition of the households by the relationship of the members to the heads of households are shown in these tables. These tables have been prepared from the population record on a 4% sample basis. The population record contains a summary of the individual slip and relates to the entire household.

In Tables C-I Part A, the composition of households with reference to the relationship of members to the head has been classified under three broad age-groups *viz.* less than 30, 30-49 and 50+. The table is presented for the state and its districts with rural urban break up. Sex break up for heads of households are furnished. Separate figures are shown for relations, unrelated members and single member households. Relations are classified as married, never-married, widowed and divorced or separated. Under married relations, details are given separately for spouse, son, brother, father, mother, other males and other females. Those relations whose marital status is other than married are classified under son, brother, daughter, sister, father, mother, other males and other females.

Table C-I Part B (i) gives the distribution of households where the head of household is a male by relationship to the head. The division of members of the households into related and unrelated members is similar to Part A. Related and unrelated members are divided into two groups—currently married and with other marital status. Under each of these groups classifications have been made for son, brother, son's wife, brother's wife, daughter, sister, sister's son, daughter's husband, sister's husband, father, mother, mother's brother, other males and other females. Unrelated members are shown with sex break up.

C-I Part B (ii) is similar to Part B (i) and gives details where the head of household is a female.

These tables will be of sociological interest. They will help to study the extent and future trends in the joint family system.

These tables correspond to Table C-I "Composition of sample households by relationship to head of family" of 1961 census.

C-I PART A MEMBERS OF HOUSEHOLDS BY RELATIONSHIP

TABLE C–II

Age and marital status

C-II AGE AND MARITAL STATUS

FLY LEAF

The distribution of population by sex and broad age groups cross-classified by marital status is shown in this table. Data are presented for the State and districts with rural-urban break up. This table is similar to Table C-II—Age, sex and marital status of the 1961 census.

The age-groups for which data are given in this table are 0-9, five year age-groups from 10 to 69 and 70+. Those whose age has not been reported are shown under 'age not stated'.

Marital status has been classified as never married, married, widowed, divorced or separated. Those who did not report any of the above are shown separately under 'unspecified status'.

The instructions to the enumerators for eliciting information on questions relating to age, marital status etc. are given in Annexure-I to the Preliminary Note.

TABLE C–III

PART A

Age, sex and education in all areas

PART B

Age, sex and education in urban areas only

C-III AGE, SEX AND EDUCATION
FLY LEAF

This table shows the population of each sex by certain broad age-groups and further classified according to educational levels. This table is presented in two parts: Part A shows data for the total (rural and urban areas taken together) and Part B gives figures for urban areas only. The table gives data for the state and districts.

Seven age-groups have been adopted for this table. They are 0-4, 5-9, 10-14, 15-19, 20-24, 25-34, and 35+. Those who did not report their age have been shown under 'age not stated'. The age-groups adopted in this table are different from those of Table C-II. As attainment of educational levels generally stops at the age of 35, the age-groups have been suitably modified and adopted.

The educational levels for which data are shown in Part A and Part B are different. For urban areas, a more detailed classification has been adopted. The levels adopted for Part A and Part B are as follows.

Part A

1. Illiterate
2. Literate (without educational level)
3. Primary
4. Middle
5. Matriculation or Higher Secondary
6. Non-technical diploma or certificate not equal to degree
7. Technical diploma or certificate not equal to degree
8. Graduate and above

Part B

1. Illiterate
2. Literate (without educational level)
3. Primary
4. Middle
5. Matriculation or Higher Secondary
6. Non-technical diploma or certificate not equal to degree
7. Technical diploma or certificate not equal to degree
8. Graduate degree other than technical degree
9. Post graduate degree other than technical degree
10. Technical degree or diploma equal to degree or post graduate degree with sub-classification for engineering and technology, medicine, agriculture, veterinary and dairying, teaching and others

The educational levels in Part A have been abridged as the cross-classifications for educational levels in rural areas have been done on a limited range.

This table is similar to table C-III—Age, Sex and Education of the 1961 census. This table was presented in three parts (A B and C) in 1961. Part C of 1961 related to rural areas which has not been presented in 1971. Figures for rural areas can however be arrived at by substracting the figures for urban areas (Part B) from the figures for all areas (Part A). The educational levels and age-groups shown in 1971 table are slightly different from those of 1961.

This table will help in measuring the growth of literacy in the total population as well as in the different age-groups since the last census.

TABLE C–IV

Single year age returns

(Full count)

C-IV SINGLE YEAR AGE RETURNS

FLY LEAF

The population of each sex has been given for single year age in this table. This table is confined to the state level and figures are presented for total, rural and urban areas. Those who did not report their age have been shown under 'age not stated' at the end of the table. In the Appendix to this table, figures for quinquennial age-groups have been given for the districts with rural-urban break up. This table is useful for constructing life tables.

Individual age data are presented for ages 0 to 100. In respect of persons who reported their age above 100, figures are shown for such of the ages as were reported. This table is similar to Table C-IV single year age returns of the 1961 census.

In Tamil Nadu, this table has been prepared on a full count basis as well as on sample basis. The sample selected for rural areas was 10% and for urban areas, 20%. On the basis of the sample figures, estimates for the total area have been made and presented. Both the sets of figures are presented. The estimation procedure adopted has been given in Annexure II to the Preliminary Note.

Two statements are appended to this fly leaf. One statement shows the distribution of one unit of 1,000 persons in each sex in the total, rural and urban areas by single year ages separately for the full count population and the population estimated. The second statement gives the distribution of one unit of 1,000 person of each sex by quinquennial age-groups. It may be seen from the two statements presented that proportions of the estimated figures very closely agree with those derived from the full count figures and that the differences in the estimated figures are very marginal.

Statement showing the distribution of one unit of 1,000 persons in each sex in the total, rural and urban areas by single year ages separately for full count tabulation and estimated figures

TABLE C-V

PART A

Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India

PART B

Speakers of languages/mother tongues (inclusive of mother-tongues where grouped) other than those specified in Schedule VIII to the Constitution of India

TABLE C-V MOTHER-TONGUES OF THE 1971 CENSUS

PART A : DISTRIBUTION OF LANGUAGES (INCLUSIVE OF MOTHER-TONGUES GROUPED UNDER EACH) SPECIFIED IN SCHEDULE VIII TO THE CONSTITUTION OF INDIA

PART B : SPEAKERS OF LANGUAGES/MOTHER-TONGUES (INCLUSIVE OF MOTHER TONGUES WHERE GROUPED) OTHER THAN THOSE SPECIFIED IN SCHEDULE VIII TO THE CONSTITUTION OF INDIA

FLY LEAF

These tables correspond to the all-India language tables of the Census of India 1951 published in Census of India Paper I of 1954 and the language tables C-V of the Census of India 1961 published in volume I Part II-C—(ii) Language Tables and volume IX—Madras Part II-C(i) Cultural tables.

The question on mother-tongues at the 1971 census and instructions to enumerators were as follows.

Question 14 : Mother-tongue

Definition : Mother-tongue is the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother-tongue. In the case of infants and deaf, mutes the language usually spoken by the mother shall be recorded.

Record mother-tongue in full whatever be the name of the language as returned and avoid use of abbreviations. You are not expected to determine if the language returned by a person is the dialect of another major language and so on. You should not try to establish any relationship between religion and mother-tongue. You are bound to record the language as returned by the person as his mother-tongue and you should not enter into any argument with him and try to record anything other than what is returned. If you have reason to suspect that in any area due to any organised movement, mother-tongue was not being truthfully returned, you should record the mother-tongue as actually returned by the respondent and make a report to your superior Census officers for verification. You are not authorised to make any correction on your own.

Table C-V Part A is in two sections : (i) showing the distribution of speakers of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India for the State and its fourteen districts separately for total, rural and urban areas cross-classified by sex, and (ii) showing the distribution of speakers of these languages for fourteen districts, one hundred and thirty-three taluks and four hundred and thirty nine towns in the State for total areas only cross-classified by sex. The data for the rural areas of the taluks are not presented but they can be derived by subtracting data in respect of towns within the taluks from the total taluk figures.

Table C-V Part B presents speakers of languages/mother-tongues (inclusive of mother-tongues where grouped) other than those shown under Part A for the state, districts, taluks and towns. This table is also being presented in two sections (i) showing the speakers of these languages/mother-tongues for the state and its districts for total, rural and urban areas cross-classified by sex and (ii) showing the distribution of these languages/mother-tongues for total areas of districts, taluks and towns cross-classified by sex.

In both parts A and B, mother-tongues have been grouped in some cases under the relevant language(s). This has been done on the basis of information readily available or in the light of studies already made. Those 'identifiable' mother-tongues which returned 10,000 or more speakers each at the all-India level have been grouped in parts A and B as shown below.

Part A

GUJARATI	..	Saurashtra
HINDI	..	Bhojpuri; Garhwali; Hindustani; Lamani/Lambadi; Maithili; Marwari; *Pahari; Rajasthani.
KANNADA	..	Badaga
SINDHI	..	Kachchhi
LAHNDA	..	Multani

All other mother-tongues falling under Part B and which returned less than 10,000 speakers each at the all-India level or were not 'identifiable' on the basis of information available as of date are included in the category 'Others' occurring as the last entry in Part B.

*PAHARI is a combination of various speeches spoken over long streches of areas where the speakers preferred to give general name as Pahari. Similar is the case with Naga appearing in table C-V Part B.

TABLE C VI

Bilingualism

C-VI BILINGUALISM

FLY LEAF

This table corresponds to table D-I Part II of the 1951 and C-VI of the 1961 Censuses.

The question on bilingualism at the 1971 Census was as given below.

Question 15: Other languages.

After recording the mother-tongue in question 14, enquire whether the person knows any other language(s), Indian or Foreign, and record language(s) returned by him against this question. In case he does not know any language apart from his mother-tongue put 'X' against this question.

The number of languages recorded under this question need not be more than two. These languages should be other than his mother-tongue and they should be recorded in the order in which he speaks and understands best and can use with understanding in communicating with others. He need not necessarily be able to read and write these language. It is enough if he has a working knowledge of these subsidiary languages to enable him to converse in that language with understanding."

In this table, data on bilingualism are presented only for selected languages/mother-tongues (L/MTs.). The selection of these L/MTs has been done on the basis of all India table C-VI —Bilingualism of 1961 and a list of L/MTs was devised for all India. This list formed the tables for preparing the table on bilingualism as estimated from the processing of 10% rural and 30% urban sample slips. The rural table was processed manually and the urban table on the computer. The estimated tables for rural and urban areas as pooled are presented here.

Columns 2, 3 and 4 of the table give the total number of speakers of L/MT inclusive of MTs grouped under it. Columns 5, 6 and 7 give figures of such of the speakers who returned a second language, that is to say, any other L/MT not accounted for in columns 2, 3 and 4. Column 8 contains in 'run on' fashion the names of subsidiary L/MTs inclusive of L/MTs wherever grouped by number of male and female speakers within brackets.

F-FERTILITY TABLES

(Tables F-I to F-V)

TABLE F-I

Distribution of Currently Married Women and the Related Births During the Last Year by Religion, Present age and age at Marriage.

F-I—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, PRESENT AGE AND AGE AT MARRIAGE

FLY LEAF

This table shows the distribution of currently married women and children born to them during the last one year classified according to religion, present age and age at marriage. The table is presented at the State level and has two parts. Part A gives data for rural areas and Part B relates to urban areas.

The age at marriage has been classified into less than 13, 13-17, 18-22, 23-27 and 28+. Those whose age at marriage was not reported have been shown under 'unspecified'. The present age of the currently married women has been shown under less than 13, 13-17, 18-22, 23-27, 28-32, 33-37, 38-42, 43-47 and 48+. Here also, those whose age was not reported have been classified under 'unspecified'. Separate details for Hindus, Muslims, Christians, Sikhs, Buddhists, Jains and others, are given in the table. A category 'religion not stated' has been given for those who did not report as belonging to any religion.

In the Appendix to this table, details as given in the main table have been presented for scheduled castes and scheduled tribes.

This table will help in deriving differentials by religion in median age at marriage and in age specific marital fertility rate, total and general marital fertility rate for various age at marriage groups.

TABLE F-11

Distribution of Currently Married Women and the Related Births during the last year by Education, present age and age at marriage.

F-II—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, PRESENT AGE AND AGE AT MARRIAGE

In this table, the distribution of currently married women and the children born to them during the last one year, by educational levels, age at marriage and present age are given. Like the Table F-I, this table is also presented for the state as a whole in two parts. Data for the rural areas are given in Part A and Part B contains data for urban areas.

The classifications of age at marriage and present age at marriage are the same as in Table F-I. The educational levels adopted in this table are illiterate, literate but less than matriculate, matriculate and above but less than graduate and above. Figures for educational levels not classifiable are included under 'literate but less than matriculate'.

The figures given in the table will help in deriving differentials by education in median age at marriage and in age specific marital fertility rate, total marital fertility rate and general marital fertility rate for various age at marriage groups.

F-II PART A—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, PRESENT AGE AND AGE AT MARRIAGE (RURAL)

TABLE F—III

Distribution of Currently Married Women and the Related Births during the last year by Religion, Duration of Marriage and Age at Marriage.

F-III—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, DURATION OF MARRIAGE AND AGE AT MARRIAGE.

FLY LEAF

The distribution of currently married women and the related births during the last one year classified by religion, duration of marriage and age at marriage are given in this table at the State level. This table, similar to Table F I and F II, has been presented in two parts; Part A relates to rural areas and Part B to urban areas.

The classifications for religion and age at marriage are the same as in Table F I. The duration of marriage has been grouped under less than one year, 1-4 years, 5-9 years, 10-14 years, 15-19 years, 20-24 years, 25-29 years and 30 + years. Those whose duration of marriage could not be ascertained are shown under unspecified.

Similar data as in main table are presented for Scheduled Castes and Scheduled Tribes in an Appendix.

The figures presented in this table will help in deriving differentials by religion, by duration and specific marital fertility rate for various age at marriage groups.

F-III PART A—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, DURATION OF MARRIAGE AND AGE AT MARRIAGE (RURAL)

TABLE F-IV

Distribution of Currently Married Women and the Related Births During the last year by Education, Duration of Marriage and Age at Marriage.

F-IV—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, DURATION OF MARRIAGE AND AGE AT MARRIAGE

FLY LEAF

The distribution of currently married women and the related births during the last year are given by educational levels, duration of marriage and age at marriage in this table. This table is also presented at the State level and consists of two parts. Part A relates to rural areas and Part B gives data for urban areas.

The educational levels and age at marriage groups adopted for this table are similar to those given in Table F-II. The duration of marriage classification is the same as in Table F-III.

The figures presented in this table will help in deriving differentials by education, duration, specific marital fertility rate for various age at marriage groups.

TABLE F-V

Distribution of Currently Married Women and the Related Births During the last year by Religion, Education Groups, Present Age and Age at Marriage.

F-V—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, EDUCATION GROUPS, PRESENT AGE AND AGE AT MARRIAGE

FLY LEAF

The distribution of currently married women and the related births during the last one year classified by religion-cum-education groups, present age and age at marriage are given in this table. Like all other fertility tables (F-I to F-IV), this table is also presented at the State level with separate details for rural and urban areas.

The groupings adopted for religion, present age and age at marriage are the same as in Table F-I. The groupings for educational levels are similar to those shown in table F-II.

The data will help in deriving differentials by religion-cum-educational levels in median age at marriage and in age specific marital fertility rate, total marital fertility rate and general marital fertility rate for various age at marriage groups.
