

CENSUS OF INDIA
1971

SERIES 1

INDIA

PART II-C (III) VOL. I

SOCIAL AND CULTURAL TABLES
(Tables C-I, C-VI and F-I to F-III)

A. CHANDRA SEKHAR
OF THE INDIAN ADMINISTRATIVE SERVICE
Registrar General & Census Commissioner, India

PREFACE

This volume contains tables relating to household composition, bilingualism and fertility.

Processing was done separately for rural and urban areas based respectively on 10 per cent and 20 per cent sample slips, except in the case of Himachal Pradesh, Jammu & Kashmir, Manipur, Meghalaya, Nagaland, Sikkim, Tripura and all the union territories where data were processed on full count basis. Estimated figures were derived from the rural and urban sample tables and pooled. Technical notes on sampling and estimation procedures have been included as annex to the introductory note which follows.

The tables were initially prepared in the respective state/union territory offices. The urban component of the tables had, however, been prepared in the data processing division of the Registrar General's office and supplied to the states/union territories. The task of scrutiny of tables fell on the census division of the Registrar General's office.

This volume, is a tribute to the patience, attention to detail and hard work of Shri M.G. Kini—Research Officer and his colleagues in the Census division. The fertility tables were scrutinised in the demography division under the able guidance of Shri K. S. Natarajan, Senior Research Officer. Shri Mahal Singh, Investigator took great pains to finalise the table on bilingualism. I am grateful to all of them.

For printing our thanks go to the Manager, Government of India Press, Nasik and his colleagues.

New Delhi
9 *February*, 1978.

P. PADMANABHA
Registrar General and Census Commissioner of India.

F—III Part B APPENDIX Distribution of currently married women and the related births during the last year by scheduled castes/Scheduled tribes, duration of marriage and age at marriage (Urban) . . .	492-505

The Fertility tables, F-Series, are an innovation of 1971 census. The individual slip for this census canvassed two questions, (a) age at marriage and (b) whether a child was born during the last one year. This information was elicited from currently married women only and these form the basis for compilation of F-Series tables. The tables show the distribution of the currently married women and their related births. The cross classification is by age at marriage on the one hand and the present age or duration of marriage on the other. This cross classification has been separately tabulated for different variants, e.g. relation, scheduled castes/scheduled tribes, education as also by different combinations of religions and educational level.

Specimens of the individual slip and the population record from which data have been derived alongwith instructions to enumerators for filling up these are given at annexures A & B to Part II-A General population table of the 1971 census.

But for table C-I Part B and table C-VI, all the tables presented in this volume give figures separately for rural and urban areas. The questions in the individual slip on which these tables are based are as follows :—

Question No.	Description
2	Relationship to head
3	Sex
4	Age
5	Marital status
6	For currently married women only
6(a)	Age at marriage
6(b)	Any child born in the last one year
10	Religion
11	S.C. or S.T.
12	Literacy
13	Educational level
14	Mother tongue
15	Other languages

Each table in this volume presents statistics for all India and each state/union territory and is preceded by a fly-leaf which briefly describes the data coverage and the mode of presentation.

ANNEXURE I

A NOTE ON THE SAMPLING PROCEDURE ADOPTED IN 1971 CENSUS FOR C-I PART A, C-I PART B (I) AND C-I PART B (II)

Sample size : For the preparation of tables C-I Part A, C-I Part B (i) and C-I Part B (ii) on household composition, a sample of residential households was drawn in two stages. In the first stage, a twenty per cent systematic sample of effective enumeration blocks (defined below) was selected systematically. In the second stage, twenty per cent sample of population records relating to residential households was selected from each of the sample block, again systematically.

Selection procedure : For the purpose of sample selection, the rural and urban parts of each district were treated as separate strata. Within each stratum, a list of blocks was prepared by merging those containing less than 50 households with the neighbouring blocks. Blocks formed in this way were called 'effective enumeration blocks' or simply 'effective blocks'. The list of effective blocks so formed served as a frame for the selection of the first stage unit. A twenty per cent sample of effective blocks was then selected systematically. Having identified the first stage units, the population record books for the selected effective blocks were assembled. Within each selected effective block, the population records relating to residential households were serially numbered. To do this effectively, instructions were issued to fold the population record relating to 'houseless households or institutional households'. Care was also taken to see that only one serial number was assigned to a population record, whenever the record relating to a household covered more than one page. In cases where 'effective blocks' were formed by merging two or more blocks, the population record books corresponding to all the census enumeration blocks constituting the effective block, were assembled together and then the households were selected. Fresh random numbers were selected for each effective block. The population records corresponding to the selected households were marked 'S' at the right hand top corner with a stamp provided.

Estimation procedure : The tables prepared for each of the stratum were multiplied uniformally by 25 to give the final estimated table.

ANNEXURE - II

A NOTE ON THE SAMPLING PROCEDURE ADOPTED IN THE 1971 CENSUS FOR C-VI TABLES AND FERTILITY TABLES

Sample size : A ten per cent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a tehsil/anchal/police station. In the urban part of the district, a twenty per cent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection procedure : The sample design adopted in the 1971 census was a stratified systematic sample of individual slips. For the purpose of sample selection, each district was divided into three sub-regions (1) Tehsil/anchal/police station(rural); (2) Non-city urban district and (3) City (urban unit with 100,000 and more population).

These sub-regions were termed as operational units. If, however, any of the operational unit was unduly large, it was split into sub-operational units of at least 20,000 persons. Similarly, small-sized operational units were either clubbed together or tagged on to a contiguous larger unit so as to form an "effective operational unit" of the required minimum size. Adoption of these operational units ensured accuracy in sample selection, maintaining at the same time stability in the sampling fraction within the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the purpose of the Primary census abstract (PCA) the individual slips were sorted into ten broad industrial categories and nine broad age groups for each of the sexes. The ten industrial categories of workers and non-workers were as follows : (I) Cultivators; (II) Agricultural labourers ; (III) Livestock, forestry, fishing, hunting and plantations, orchards & allied activities; (IV) Mining & quarrying; (Va) Manufacturing, processing, servicing & repairs in *household industry*; (Vb) Manufacturing, processing, servicing & repairs in *other than household industry*; (VI) Construction; (VII) Trade & commerce; (VIII) Transport, storage & communications; (IX) Other services and (X) Non-workers.

The nine age groups in to which the slips belonging to each industrial catagory were sorted were 0-14, 15-19, 20-24, 25-29, 30-39, 40-49, 50-59, 60+ and 'age not stated'. Thus the individual slips of a particular operational unit were sorted into $11 \times 9 = 99$ calls, separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon-holes for rural/ urban samples and one pigeon-hole was selected at random. The slips falling in the selected pigeon-hole constituted the sample. For operational details of the sampling procedure and instructions, the 'Manual of instructions on sorting, compilation (manual processing) & sampling procedures' may be consulted.

Estimation procedure : All the tables FI to FV & CVI are presented at state level. The sample tables have been multiplied by '10' in case of rural area and by '5' in case of urban area to estimate the final tables.

Reliability of estimates : No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of simple random sampling, as $\sqrt{(1-f)\frac{1-p}{np}}$, where 'f' is the proportion samples, (0.10 in case of rural areas &0.20 in case of urban areas); (8 'p' is the estimated proportion in any cell and 'n' the sample size being equal to ten per cent of individual slips in rural areas and twenty per cent in urban areas. In the present census, slips were sorted by sex, industrial category and age-group before sampling. It is expected that the efficiency must be considerably higher than a simple random sample of indentical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling especially when the slips were pre-sorted for most of the socioeconomic characteristics covered in a census. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable.

TABLE C-I PART A

C-I PART A—MEMBERS OF HOUSEHOLDS BY RELATIONSHIP TO HEAD OF HOUSEHOLD CLASSIFIED BY AGE GROUPS

Fly Leaf

Table C-I Part A corresponds to table C-I of 1961 which was based on 20 per cent sample. The too was prepared for total, rural and urban population separately. However, the relationship to the head was restricted only to 'married sons' and 'other married relations' without any classification by age groups.

In 1971 also this table is based on sample. Sampling was confined to family households. Institutional households like, boarding houses, jails etc. were ignored. As already explained in the general note, the sample of residential households was drawn in two stages.

Table C-I Part A presents the data regarding members of households by relationship to head of household classified by broad age groups. It gives figures for total, rural and urban areas at state level. Age groups adopted For this table are :—

Less than 30 years

30—49 years

50+ years

'Age not stated' is included in 'all ages'. The relationship to the head of the household has been distributed by son, brother, father, mother, other males, other females under category of married relations of heads of households and by son, brother, daughter, sister, father, mother, other males and other females under category of never married, widowed and divorced or separated relations of heads of households. Thus relationship to head of household has been given separately for married persons and for other marital status combined. Among married relations, the spouses of the heads of households have been given separately. Figures about unrelated members of households and single member households have also been presented in the table.

This table has been prepared from the data compiled from the entries made in columns 3, 4, 5, 6 and 7 of the population record meant for each household canvassed during the 1971 census. The table is of sociological importance indicating the extent of joint family system. The presentation of data by age groups of the heads of households and their relations classified by marital status would further indicate the future trend of joint family system. The following statement would give an idea of the relevant data.

TABLE C-I PART B (i)

HOUSEHOLDS WHERE THE HEAD IS A MALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD AND

TABLE C-I PART B (ii)

HOUSEHOLDS WHERE THE HEAD IS A FEMALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD

C-I PART B(i)—HOUSEHOLDS WHERE THE HEAD IS A MALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD

AND

C-I PART B(ii)—HOUSEHOLDS WHERE THE HEAD IS A FEMALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD

Fly-leaf

Like C-I Part A, these tables have been presented at state level but no rural/urban break-up is given. These tables too more or less correspond to table C-I of 1961 census. The tables give an idea of the composition of households where the head is male/female by relationship of member with the head of the household.

For the purpose of showing relationship, the households have been divided into two parts :—

(i) households having currently married relations of heads and

(ii) households having never married, widowed and divorced or separated relations as :—

Son, brother, son's wife, borther's wife, daughter, sister, sister's son, daughter's husband, sister's husband, father, mother, mother's brother, other males and other females. The data in respect of single member households, households with spouse living therein and households having unrelated persons have also been given separately. Further the figures of total population and total number of households as per population record have also been given.

These tables have been prepared from the data compiled from the entries made in columns 3, 4, 5, 6 and 7 of the population record meant for each household canvased during the 1971 census.

These will be of much interest to sociologists as it will reveal composition of households having married relations also.

C-1 Part B(i) — HOUSEHOLDS WHERE THE HEAD IS A MALE BY RELATIONSHIP OF MEMBERS WITH THE HEAD

Households having currently married relations of heads, as

India/State/ Union Territory	Total population	Total number of households	Single member households	Household with spouse living therein	Son	Brother	Son's Wife	Brother's Wife	Daughter	Sister	Sister's Son	Daughter's husband	Sister's husband	Father	Mother	Mother's brother	Other Males	Other Females

TABLE C-VI

C-VI BILLINGUALISM

Fly-leaf

This table corresponds to table D-I Part II of the 1951 and C-VI of the 1961 censuses.

The question on bilingualism at the 1971 census was: Question 15: Other languages:

"After recording the mother-tongue in question 14, enquire whether the person knows any other language(s), Indian or foreign, and record language(s) returned by him against this question. In case he does not know any language apart from his mother-tongue, put 'X' against this question.

The number of languages recorded under this question need not be more than two. These languages should be other than his mother-tongue and they should be recorded in the order in which he speaks and understands best and can use with understanding in communicating with others. He need not necessarily be able to read and write these languages. It is enough if he has a working knowledge of these subsidiary languages to enable him to converse in that language with understanding."

In this table, data on bilingualism are presented only for selected languages/mother-tongues (L/MTs). The selection of these L/MTs has been done on the basis of all India table C-VI—Bilingualism of 1961 and a list of L/MTs was devised for all India. This list formed the basis for preparing the table on bilingualism as estimated from the processing of 10% rural and 20% urban sample slips. The rural table was processed manually and the urban table on the computer. The estimated tables for rural and urban areas as pooled are presented here.

Columns 2, 3 and 4 of the table give the total number of speakers of L/MT inclusive of MTs grouped under it. Columns 5, 6 and 7 give figures of such of the speakers who returned a second language, that is to say, any other L/MT not accounted for in columns 2, 3 and 4. Column 8 contains in 'run on' fashion the names of subsidiary L/MTs inclusive of L/MTs wherever grouped by number of male and female speakers within brackets.

4—437 R. G. India/77

TABLE F-1

DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, PRESENT AGE AND AGE AT MARRIAGE-(RURAL/URBAN)

F-I—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, PRESENT AGE AND AGE AT MARRIAGE (RURAL/URBAN)

FLY-LEAF

This table has been prepared in two parts. Part A relates to rural areas and Part B to urban areas for the state as a whole. It gives the distribution of currently married women and the related births during the last one year by religion, present age and age at marriage of the mother.

The present age of the mother has been given for the age groups less than 13, 13—17, 18—22, 23—27, 28—32, 33—37, 38—42, 43—47, 48+ and 'unspecified' age for such cases where age was not recorded at the time of enumeration.

Age at marriage of the mother has been shown for age groups less than 13, 13—17, 18—22, 23—27, 28+ and 'unspecified'. The table presents the data for six major religions viz., Hindus, Muslims, Christians, Sikhs, Buddhists, Jains and also for 'other religions and persuasions' and 'religion not stated'.

This table is followed by an appendix which gives similar data for scheduled castes/scheduled tribes separately for rural and urban areas.

The data on present age, age at marriage, related births and religion have been compiled from the answers recorded against question numbers 4, 5, 6 and 10 of the individual slip. Similar data for the appendix have been tabulated from the individual slips having entries against question 11.

The table gives data which will help in deriving differentials by religion in median age at marriage and in age specific fertility rate total fertility rate and general fertility rate for various ages at marriage groups. It is for the first time that data on fertility in such detail were collected at the census.

The relevant instructions given to the enumerators for filling up related questions are given in the introductory note to this volume.

TABLE F-II

DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, PRESENT AGE AND AGE AT MARRIAGE (RURAL/URBAN)

F-II—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY EDUCATION, PRESENT AGE AND AGE AT MARRIAGE (RURAL/URBAN)

FLY-LEAF

This table has been prepared in two parts, Part A (rural) and Part B (urban) for the state as a whole. It gives the distribution of currently married women and the related births during the last one year by education, present age and age at marriage of the mother.

The age groups in regard to present age and age at marriage of the mother are similar to those of table F-I.

In both parts A & B of this table, data are presented for :

(i) Illiterate.

(ii) Literate but less than matriculate.

(iii) Matriculate and above but less than graduate.

(iv) Graduate and above.

The data on present age, age at marriage, related births and level of education have been compiled from the answers recorded against question numbers 4, 5, 6, 12 and 13 of the individual slip.

It is for the first time that an attempt has been made in the 1971 census to collect such detailed information on fertility. This table gives data which will help in deriving differentials by education in median age at marriage and also in age specific fertility rate, total fertility rate and general fertility rate for various ages at marriage groups.

20—437 R. G. India/77

TABLE F-III

DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, DURATION OF MARRIAGE AND AGE AT MARRIAGE (RURAL/URBAN)

24—437 R. G. India/77

F-III—DISTRIBUTION OF CURRENTLY MARRIED WOMEN AND THE RELATED BIRTHS DURING THE LAST YEAR BY RELIGION, DURATION OF MARRIAGE AND AGE AT MARRIAGE (RURAL/URBAN)

· FLY-LEAF

This table is in two parts, Part A (rural) and Part B (urban) for the state as a whole. It gives the distribution of currently married women and the related births during the last one year by religion, duration of marriage and age at marriage of the mother.

The duration of marriage is given as less than 1, 1-4, 5-9, 10-14, 15-19, 20-24, 25-29, 30+ and 'unspecified'. The marriage age groups are less than 13, 13-17, 18-22, 23-27, 28+ and 'unspecified'.

The statistics are presented for six major religions, viz., Hindus, Muslims, Christians, Sikhs, Buddhists, Jains and also for 'other religions and persuasions' and 'religion not stated'. The age groups used for age at marriage are the same as those used for table F-I.

This table is followed by an appendix which gives similar data for scheduled castes/scheduled tribes separately for rural and urban areas.

The data on age at marriage, duration of marriage, related births and religion have been compiled from the answers recorded against question numbers 4, 5, 6 and 10 of the individual slip. Similar data for the appendix have been tabulated from the individual slips having entries against question 11.

These data will help in deriving differentials by religion in duration specific fertility rates for various ages at marriage groups.
