SOCIAL AND CULTURAL TABLES
(Tables C-I to C-VI and Fertility Tables)

N. K. CHOUDHURY
of the Indian Administrative Service
DIRECTOR OF CENSUS OPERATIONS
ASSAM

PREFACE

This volume contains two sets of Census tables viz. C Series—Social and Cultural tables and F Series—Fertility tables Six tables from table C-I to C-VI out of eight C Series tables, prepared according to 1971 plan of tabulation of Census data are incorporated in this publication. The remaining two tables viz. table C-VII and C-VIII are published separately in volume Part II-C (i). There are in all five Fertility tables and all these are included in this volume.

Tables in C Series except C-I are prepared from answers recorded against various questions included in the Individual Slip canvassed for every single person enumerated. Table C-I is compiled from Population Record prepared by posting certain selected data from Individual Slips for members of residential households. Fertility tables are prepared for women found married during enumeration—the source of the data again being the Individual Slips.

All tables in the C-Series included in this publication barring tables C-I and C-V are prepared on a basis of 10 per cent rural and 20 per cent urban sample. The F-Series tables have also been similarly compiled. Table C-V relating to mother tongue is based on a full-count basis and table C-I on a 4 per cent sample.

Shri A. K. Saikia, I.A.S. conducted 1971 Census in Assam and it was under his guidance that a substantial portion of works of compilation and tabulation of data was done. He was ably assisted by Shri J. C. Bhuyan, Deputy Director of Census Operations under whose effective supervision the full count table and the rural tables were prepared. Shri P. K. Barman, Tabulation Officer and Shri P C. Sarmah, Statistical Assistant rendered valuable service in preparation of the tables. The 20 per cent sample urban Individual Slips and 4 per cent Sample Population Records were coded and punched under the able guidance of Shri N. Bhattacharjee, Assistant Director of Census Operations and Shri P. C. Baruah, Investigator.

We are grateful to Shri K. K. Chakravorty, Deputy Registrar General, India for holding out valuable suggestions and help in finalisation of the tables. The Data Processing Division of the Office of the Registrar General, India rendered invaluable service in processing and supply of the final sample tables.

We are deeply indebted to Shri P. Padmanabha, Registrar General, India for his keen interest and help in arranging printing of this volume.

Gauhati
January 30, 1981.

N. K CHOUDHURY
Director of Census Operations, Assam

CENSUS OF INDIA 1971

PUBLICATION PROGRAMME

ASSAM

(Series 3 will relate to Assam only. Under this series the following publications will be issued)

Portrait of Population	*A popular version of the General Report*
Part I-A	General Report (First Part)
Part I-B	General Report (Second Part)
Part I-C	Subsidiary Tables
Part II-A	General Population Tables (A Series)
Part II-B	Economic Tables (B Series)
Part II-C(i)	Distribution of Population, Religion, Scheduled Castes and Scheduled Tribes
Part II-C(ii)	Other Social and Cultural Tables and Fertility Tables
Part II-D	Migration Tables
Part III	Establishment Report and Tables (E Series)
Part IV	Housing Report and Tables (H Series)
Part V	Special Tables, Ethnographic Notes on Scheduled Castes and Scheduled Tribes
Part VI-A	Town Directory
Part VI-B	Special Survey Reports on Selected Towns
Part VI-C	Survey Reports on Selected Villages
Part VII	Special Reports on Graduates and Technical Personnel
Part VIII-A	Administration Report on Enumeration (For official use only)
Part VIII-B	Administration Report on Tabulation (For official use only)
Part IX	Census Atlas
Part X	District Census Handbook and Special Monographs
Miscellaneous	Special Studies and other miscellaneous report.

CONTENTS

		Pages
Preface		iii
A note on the sampling procedure adopted in the 1971 census for social and cultural tables (except C-I and C-V)		1—2
A note on the sampling procedure adopted in 1971 census for C-I Part A, C-I Part B (i) and C-I Part B (ii)		3
TABLES		
C-I PART A	Member of household by relationship to head of household classified by age-groups.	4—25
C-I PART B (i)	Households where the head is a male by relationship of members with the head	26—29
C-I PART B (ii)	Households where the head is a female by relationship of members with the head	30—33
C-II	Age and marital status	34—55
C-III PART A	Age, sex and education in all areas	56—63
C-III PART B	Age, sex and education in urban areas only	64—75
C-IV	Single year Age returns	76—79
Appendix to table C-IV	Distribution of persons by five year age-groups	80—90
Fly leaf to table C-V		91—
C-V PART A (i)	Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India	92—95
C-V PART A (ii)	Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India for Districts, Police Stations and Towns	96—125
C-V PART B (i)	Speakers of languages/mother-tesegues (inclusire of mother-tonuues (inclusive of mothr-tonguee where grouped) other than those specified in schedule VIII to the Constitution of India for state and districts,	126--141
C-V PART B (ii)	Speakers of languages/mother-tongues (inclusive of mother-tongues where grouped) other than those specified in Schedule VIII to the Constitution of India for districts/police stations/towns	142—184

C-VI	Bilingualism	185—188
A note on the sampling procedure adopted in the 1971 census for Fertility tables		189
F-I PART A	Distribution of currently married women and the related births during the last year by religion, present age and age at marriage (rural)	190—193
F-I PART B	Distribution of currently married women and the related births during the last year by religion, present age and age at marriage (urban)	
Appendix to table F-I		194—199
	Distribution of currently married women and the related births during the last year by Scheduled Castes/Scheduled Tribes, present age and age at marriage (rural/urban)	200—203
F-I PART A	Distribution of currently married women and the related births during the last year by education, present age and age at marriage (rural)	204—205
F-II PART B	Distribution of currently married women and the related births during the last year by education, present age and age at marriage (urban)	206—207
F-III PART A	Distribution of currently married women and the related births during the last year by religion, duration of marriage and age at marriage (rural)	208—211
F-III PART B	Distribution of currently married women and the related births during the last year by religion, duration of marriage and age at marriage (urban)	212—217
Appendix to table F-III		218—221
	Distribution of currently married women and the related births during the last year by Scheduled Castes/Scheduled Tribes, duration of marriage and age at marriage (rural/urban)	
F-IV PART A	Distribution of currently married women and the related births during the last year by education, duration of marriage and age at marriage (rural)	222—223
F-IV PART B	Distribution of currently married women and the related births during the last year by education, duration of marriage and age at marriage (urban)	224—225
F-V PART A	Ditsribution of currently married women and the related births during the last year by religion, education groups, present age and age at marriage (rural)	226—237
F-V PART B	Distribution of currently married women and the related births during the last year by religion, education groups, present age and age at marriage (urban)	238—253

A Note on the sampling procedure adopted in the 1971 Census for social and cultural tables (except C-I & C-V)

Sample size : A ten percent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a tehsil/anchal/police station. In the urban part of the district, a twenty percent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience

Selection procedure; The sample design adopted in the 1971 census was a stratified systematic sample of individual slips For the purpose of sample selection, each district was divided into three sub-regions. (1) Tehsil/anchal/police station (rural), (2) Non-city urban district and (3) City (urban unit with 100,000 and more population).

These sub-regions were termed as operational units If, however, any of the operational unit was unduly large, it was split into sub-operational units of at least 20,000 persons. Similarly, small-sized operational units were either clubbed together or tagged on to a contiguous larger unit so as to form an "effective operational unit" of the required minimum size Adoption of these operational units ensured accuracy in sample selection, maintaining at the same time stability in the sampling fraction within the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the purpose of the Primary Census Abstract (PCA) the individual slips were sorted into ten broad industrial categories and nine broad age groups for each of the sexes The ten industrial categories of workers and non-workers were as follows. (I) Cultivrtors, (II) Agricultral labourers, (III) Lives'ock, forestry, fishing, hunting and plantations, orchards & allied activities (IV) Mining & quarrying (Va) Manufacturing, processing, servicing and repairs in **household industry**; (Vb) Manufacturing, processing, servicing & repairs in **other than household industry**; (VI) Construction, (VII) Trade & commerce, (VIII) Transport, storage & communications (IX) Other services and (X) Non-workers.

The nine age groups into which the slips belonging to each industrial category were sorted were 0-14, 15-19, 20-24, 25-29, 30-39, 40-49 50-59, 60+ and 'age not stated' Thus the individual slips of a particular operational unit were sorted into 11+9=99 cells, separately for males and females Sampling was done in each of the operational units independently by taking separate random starts The slips were then distributed into 10 (or 5) pigeon-holes for rural/urban samples and one pigeon-hole was selected of random, The slips falling in the selected pigeon-hole constituted the sample For operational details of the sampling procedure and instructions, the 'Manual of instructions on sorting, compilation (manual processing) & sampling procedures' may be consulted. All tables except A-I to A-V (Pop. tables), B-I Part A B-II (economic tables) C-V (mother tongue), C-VII (Religion) and C-VIII (scheduled castes & tribes) have been prepared on a sample basis.

Estimation procedure · The tables prepared for each of the districts/states from the ten percent rural and twenty percent urban sample slips have been inflated to give the final estimated tables. Estimates have been obtained by making use of the cell frequencies (usually labelled as 'controls') available from the tables prepared on full count basis, namely, PCA and B-I Part A In order to ensure the maximum possible inter-table consistency, it became necessary to use the estimated frequencies of a few of the the final tables as controls for estimating some cell frequencies of other tables

This way of estimating the cell frequencies ensured that marginal totals of estimated tables tallied with that of the full-count tables. This is convenient to the user because after adjustment,

the identical marginal totals are found in tables having the same marginal specification. "The adjustment diminishes the sampling variance to some extent; the more the controls, the smaller the sampling variance of the adjusted frequencies".[1] Further, adjustment to known control totals has at the same time the effect of eliminating biases in the nature of inherent differences between the sample and complete count.

For the purpose of estimation of final tables, a set of multipliers was prepared for each table. A multiplier is the ratio of full-count frequency of some characteristics from PCA or Table B-I Part A and the corresponding sample frequency of the same characteristics from the sample table. The following statement gives the level of presentation of the tables and the related controls on which the multipliers are based. The details will be presented in the report on sampling procedures to be published later:—

Table	Level of presentation	Control based from Tables
C-II	District	B-I Pt A & PAC
C-III A	—do—	,, ,,
C-III B	—do—	,, ,,
C-IV	State	,, ,,
C-IV App.	District	,, ,,

As no such control was readily available for C-VI (bilingualism), these were estimated by multiplying the sample values by 10 and 5 in rural and urban areas respectively.

Reliability of estimates : No exact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of simple random sampling, as $\sqrt{(I-f)\frac{1-p}{np}}$ where 'f' is the proportion samples (0.10 in case of rural areas & 0.20 in case of urban areas): 'p' is the estimated proportion in any cell and 'n' the sample size being equal to ten percent of individual slips in rural areas and twenty percent in urban areas. In the present census, slips were sorted by sex, industrial category and age-group before sampling. It is expected that the efficiency must be considerably higher than a simple random sample of identical size. Extensive studies conducted have indibated systematic sampling of individuals is more efficient and random sampling especially when the slips were Pre-sorted for most of the socio-economic characteristics covered in a census[2]. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable.

A note on the sampling procedure adopted in 1971 Census for C-I Part A, C-I Part B(i) and C-I Part B(ii)

Sample size : For the preparation of tables C-I Part A, C-I Part B (i) and C-I Part B (ii) on household composition, a sample of residential households was drawn in two stages. In the first stage, a twenty percent systematic sample of effective enumeration blocks (defined later) was selected systematically. In the second stage, a twenty percent sample of population records relating to residential households was selected from each of the sample block, again systematically.

Selection procedure : For the purpose of sample selection, the rural and urban parts of each district were treated as separate strata. Within each stratum, a list of blocks was prepared by merging those containing less than 50 households with the neighbouring blocks. Blocks formed in this way were called 'effective enumeration blocks' or simply 'effective blocks'. The list of effective blocks so formed served as a frame for the selection of the first stage unit. A twenty percent sample of effective blocks was then selected systematically. Having identified the first stage units, the population record books for the selected effective blocks were assembled. Within each selected effective block, the population records relating to residential households were serially numbered. To do this effectively, instructions were issued to fold the population record relating to 'houseless households or institutional households'. Care was also taken to see that only one serial number was assigned to a population record, whenever the record relating to a household covered more than one page. In cases where 'effective blocks' were formed by merging two or more blocks, the population record books corresponding to all the census enumeration blocks constituting the effective block, were assembled together and then the households were selected. Fresh random numbers were selected for each effective block. The population records corresponding to the selected households were marked 'S' at the right hand top corner with a stamp provided.

Estimation procedure : The tables prepared for each of the stratum were multiplied uniformally by 25 to give the final estimated table.

TABLE C-I PART-A—MEMBERS OF HOUSEHOLDS BY RELATIONSHIP TO HEAD OF HOUSEHOLD CLASSIFIED BY AGE-GROUP

State/ District	Age-group of the head of Households	Heads of Households		Total No. of House-holds	Total Household Population		No. of Members by relationship to head

TABLE C-V

MOTHER TONGUES OF THE 1971 CENSUS

Part A : Distribution of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the Constitution of India.

Part B : Speakers of languages/mother-tongues (inclusive of mother-tongues where grouped) other than those specified in Schedule VIII to the Constitution of India.

FLYLEAF

These tables correspond to the all-India language tables of the Census of India 1951 published in Census of India Paper I of 1954 and the language table C-V of the Census of India 1961 published in volume I part II-C (ii)-Language tables and volume III Part II-C Social and Cultural tables for Assam.

The question on mother-tongues at the 1971 Census and instructions to enumerators were as follows.

Question 14 : Mother-tongue

Definition :—Mother-tongue is the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother-tongue. In case of infants and deaf mutes the language usually spoken by the mother shall be recorded.

Record mother-tongue in full whatever be the name of the language as returned and avoid use of abbreviations. You are not expected to determine if the language returned by a person is the dialect of another major language and so on. You should not try to establish any relationship between religion and mother-tongue. You are bound to record the language as returned by the person as his mother-tongue and you should not enter into any argument with him and try to record anything other than what is returned. If you have reason to suspect that in any area due to any organised movement, mother-tongue was not being truthfully returned. you should record the mother-tongue as actually returned by the respondent and make a report to your Superior Census Officers for verification. You are not authorised to make any correction on your own.

Table C-V Part A is in two sections : (i) showing the distribution of speakers of languages (inclusive of mother-tongues grouped under each) specified in Schedule VIII to the constitution of India for the state and its ten districts separately for total, rural and urban areas cross-classified by sex and (ii) showing the distribution of speakers of these languages for ten districts, one hundred eight police stations and seventy four towns in the state for total areas only cross-classified by sex. The data for the rural areas of the tahsil are not presented but they can be derived by subtracting data in respect of towns within the tahsil from the total tehsil figures.

Table C-V Part B presents speakers of languages/mother-tongues (inclusive of mother-tongues where grouped) other than those shown under Part A for the state, districts, tahsils and towns This table is also being presented in two sections (i) showing the speakers of these languages/mother-tongues for the state and its districts for total, *rural and urban areas cross-classified by sex and* (ii) showing these distribution of these languages/ mother-tongues for total areas of districts, tahsils and towns cross-classified by sex.

In both parts A and B, mother-tongues have been grouped in some cases under the relevant language (s). This has been done on the basis of information readily available or in the light of studies already made. Those 'identifiale' mother-tongues which returned 10,000 or more speakers each at the all-India level have been grouped in parts A and B as shown below.

Part A

BENGALI	—	Chakma ; Haijong/Hajong Malpaharia ; Rajbangsi
HINDI	—	Bhojpuri , Chambeali ; Garhwali ; Hindustani ; Jaipuri ; Kumauni , Magadhi/Magahi , Maithili ; Marwari ; Mewari ; Nagpuria ; Rajasthani ; Sadan/ Sadri ; Surgujia
KASHMIRI	—	Kishtwari
ORIYA	—	Bhatri

Part B

BODO/BGORO	—	Kachari ; Mech
GONDI	—	Maria
*MUNDA	—	Kol
NISSI/DAFLA	—	Apatani , Bangni
SANTALI	—	Karmali ; Mahili
TRIPURI	—	Reang

All other mother-tongues falling under Part B and which returned less than 10,000 speakers each at the all India level or were not 'indentifiable' on the basis of information available as of date are included in the category 'Others' occurring as the last entry in Part B.

*PAHARI is a combination of various speeches spoken over long stretches of areas where the speakers preferred to give a general name as Pahari. Similar is the case with BHOTIA, KUKI, MUNDA and NAGA appearing in table C-V Part B and marked with asteriks there in.

*Includes Mizo district now constituted as union territory of Mizoram.

A note on the the sampling procedure adopted in the 1971 census for Fertility tables.

Sample size : A ten percent sample of the slips was selected linear systematically with a random start from the individual slips relating to the rural parts of a tehsil/anchal/police station. In the urban part of the district, a twenty percent systematic sample of the individual slips was selected with a separate random start. The sample sizes were adopted on consideration of required precision, available resources and operational convenience.

Selection procedure : The sample design adopted in the 1971 cencus was a stratified systematic sample of individual slips for the purpose of selection, each district was divided into three subregions (1) Tehsil/anchal/police station (rural) ; (2) Non-city urban district and (3) City (urban unit with 100,000 and more population).

These sub-regions were termed as operational units If, however, any of the operational units was unduly large it was split into sub-operational units of at least 20,0000 persons. Similarly, small sized operational units were either clubbed together or tagged on to a contiguous larger units so as to form an "effective operational unit" of the required minimum size. Adoption of these operational units ensured accurancy in sample selection maintaining at the same time stability in the sampled areas. This procedure has ensured effective control over sample selection within each block, as also in the entire operational unit.

For the pupose of the Primary census abstract (PCA) the individual slips were sorted into ten broad industrial categories and nine broad age groups for each of the sexes. The ten industrial categories of workers and non-workers were as follows : (I) Cultivators; (II) Agricultural labourers; (III) Livestock, forestry, fishing, hunting and plantations, orchards & allied activities (IV) Mining & quarrying; (Va) Manufacturing, processing servicing & repairs in **household industry**; (Vb) Manufacturing, processing, servicing & repairs in **other than household industry**; (VI) Construction; (VII) Trade & commerce; (VIII) Transport, storage & comunications (IX) Other services and (X) Non-workers.

The nine as groups into which the slips belonging to each industrial category were sorted were 0—14, 15—19, 20—24, 25—29, 30—39, 40—49, 50—59, 60+ and 'age not stated'. Thus the individual slips of a particular operational unit were sorted into 11 x 9—99 cells, separately for males and females. Sampling was done in each of the operational units independently by taking separate random starts. The slips were then distributed into 10 (or 5) pigeon-holes for rural/urban samples and one pigeon-hole was selected at random. The slips falling in the selected pigeon-hole constituted the sample. For operational details of the sampling procedure and instructions, the 'Manual of instructions on sorting, compilation (manual processing) & sampling procedures' may be consulted.

Estimation procedure : All the tables FI to FV are presented at state level. The sample table FI to FV have been multiplied by '10' in case of rural area and by '5' in case of urban area to estimate the final tables.

Reliability of estimates : No extact formula can be given for the precision of the estimates in view of the systematic sampling design adopted. The relative standard error can be estimated roughly on the basis of simple random sampling, as $\sqrt{(1-f)\frac{1-p}{pn}}$, where 'f' is the proportion samples, (0.10 in case of rural areas and 0.20 in case of urban areas); (8 'p' is the estimated proportion in any cell and 'n' the sample size being equal to ten percent of individual slips in rural areas and twenty percent in urban areas. In the persent census, slips were sorted by sex, industrial category and age-group before sampling. It is expected that the efficiency must be considerably higher than a simple random sample of identical size. Extensive studies conducted have indicated that systematic sampling of individuals is more efficient than random sampling especially when the slips were pre-sorted for most of the socio-economic characteristics covered in a census. Thus the estimates prepared on the basis of the systematic sampling in the present census can be expected to be quite reliable.
