General Population Tables)

PREFACE

ONE OF THE CONCEPTS developed at the time of the 1971 Census was that of the Standard Urban Area. Its essentials were that it should have a core town of a minimum population size of 50,000 persons; its contiguous areas made up of other urban as well as rural administrative units should have close mutual socio-economic links with the core town; and, there should be probabilities of the entire area getting fully urbanised in the period of the next two or three decades. The idea behind the development of this concept was that it is necessary to have a comparative data for such growing areas continuously for at least three decades to enable one to have a really meaningful picture.

This thought replaced the 1961 Census concept of the Town-Group which was composed of the independent urban units of the vicinity, not necessarily contiguous to one another but which were to some extent inter-dependent. It was later felt that the population data for such Town-Groups became incomparable from Census to Census as the boundaries of the towns themselves changed and the intermediate areas were left out of account. This was also stressed at one of the symposia of the International Geographic Union in 1968. It was in this way that the concept of the Standard Urban Area came to be developed for adoption at the 1971 Census.

We hope the information presented here will be found useful by social scientists, administrators and planners. We believe that such data for the various standard urban areas for successive Censuses will yield much more interesting information for them to study the urbanisation and development around large urban nuclei.

In the preparation of this volume Sarva' Shri S. P. Kashyap and M. M. Goyal have been very helpful. Others who had assisted in this work are mentioned overleaf.

APPENDIX :	Primary Census Abstract of the Standard Urban Areas	25

INTRODUCTION

IT MAY BE RECALLED that the concept of town-groups was used in the 1961 Census and data was presented for each town-group. This was not, however, considered very useful as the town-groups did not include contiguous rural areas around the city or town, which are likely to be urbanised in the near future. The standard urban area is a new concept developed at the 1971 Census and it implies territories contiguous to a core city or town which are likely to be urbanised in the next twenty years. The utility of this concept lies in the fact that even when statutory limits of existing towns are changed, these areas do not undergo any change and this increases comparability of data obtained at different Censuses. Thus, standard urban areas have fixed areas covering all the cities or towns with a population of 50,000 and above, and, adjoining areas, which may be rural or may be covered by smaller towns under the intensive influence or likely to be under the intensive influence of the core city or town. The standard urban areas usually have some or all the following characteristics :

(a) Predominent urban land use,

(b) Intensive interaction with the core-towns reflected in the socio-economic infra-structure like communication, services, educational facilities, market facilities etc.,

(c) Anticipated urban growth as a result of locational decisions regarding the socio-economic infra-structure and servicing facilities, and,

(d) Existence of persons in rural areas engaged in non-agricultural activities in large measure.

It is also necessary to note the difference between a standard urban area and an Urban Agglomeration. Whereas a standard urban area presents the picture of the area surrounding the core-city or town, that is likely to be urbanised during the next two dacades, an urban agglomeration represents an area consisting of contiguous urban areas and such rural areas as are so near to being urban that it makes no difference. The entire area of an urban agglomeration is thus already developed and has exclusively urban composition, while, the standard urban area has both urban and rural composition.

Fourteen Standard Urban Areas have been delimited in Rajasthan State which are briefly mentioned in the following statement :—

District	Name of the Standard Urban Area	Component Units	
		Urban	Rural
Ganganagar	Ganganagar	1	13
Bikaner	Bikaner	3	14
Churu	Churu	2	...
Alwar	Alwar	1	12
Bharatpur	Bharatpur	2	13
Jaipur	Jaipur	3	66
Sikar	Sikar	1	2
Ajmer	Ajmer	2	23

Tonk	Tonk	1	10
Jodhpur	Jodhpur	1	12
Bhilwara	Bhilwara	1	7
Udaipur	Udaipur	1	25
Kota	Kota	1	34

The work relating to the demarcation of these areas was undertaken by us in consultation with the Town Planning Department of the Government of Rajasthan and the Central Town & Country Planning Organisation of the Government of India.

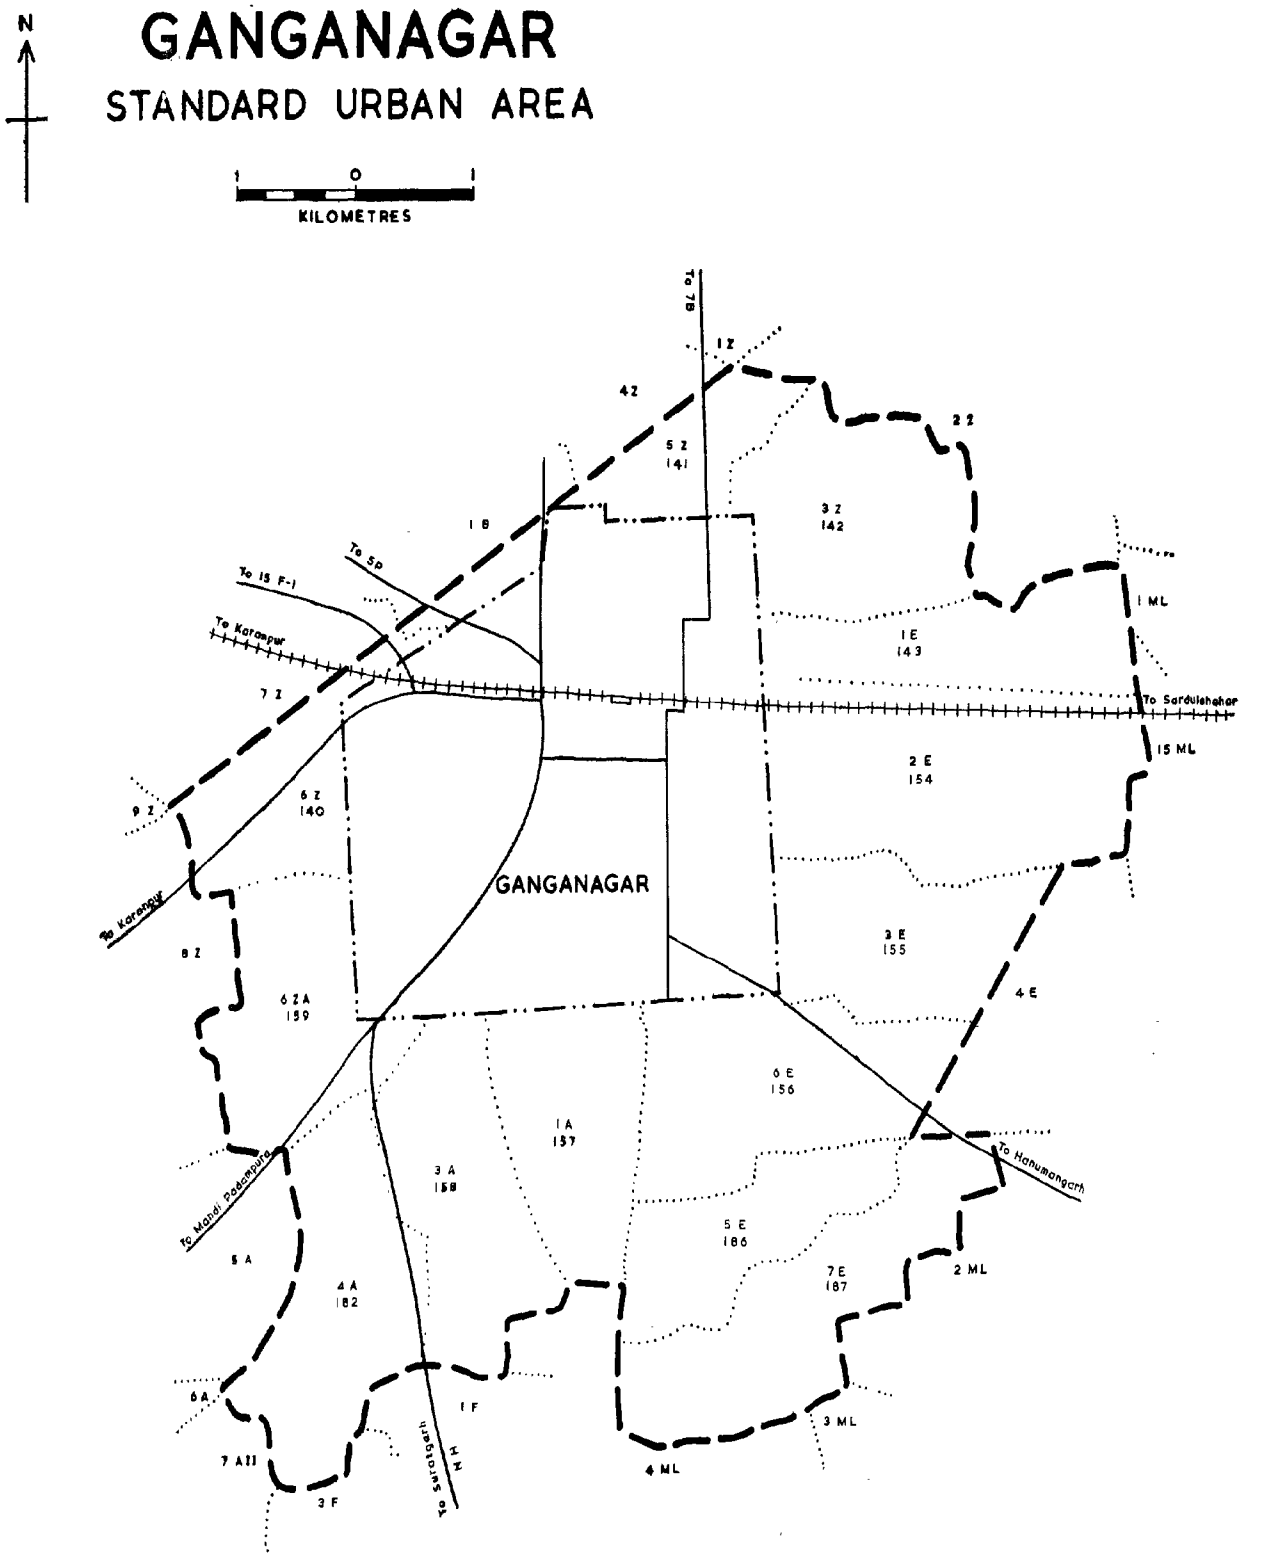

Presentation of the demographic information for these standard urban areas in Rajasthan is the purpose of this volume which is issued as a supplement to our Part II-A General Population Tables, published earlier.

Our readers may recall that we presented four full count tables in that part of our report namely Table A-I, which contained data on Area, houses and population; Table A-II, wherein the decadal variations in population since 1901 were shown; Table A-III, where villages were classified by various population ranges; and, Table A-IV, which presented our Towns and Urban Agglomerations classified by population sizes, and, wherein the population of each urban unit for the Census years from 1901 was also indicated. Apart from these four Tables, the volume also had the Primary Census Abstract. The Table A-V and its Appendix, presented in this volume, belong to the same series and show the demographic particulars of the various standard urban areas in Rajasthan.

The book opens with maps of the Standard Urban Areas with copious notes over each area on the pages alongside. This is intended to acquaint the reader with these regions and to help him better appreciate the demographic details presented later in the Table A-V and its Appendix.

THE GANGANAGAR SUA

The standard urban area of Ganganagar town is composed of one urban and thirteen rural units. It has a total population of 93,918 persons of which about 96 per cent is contributed by the urban component. It comprises of 49.55 sq. kms. of which 87.7 per cent belongs to the rural. The basic particulars of this region are given below :

Particulars	Total	Urban Component	Rural Component
Area (Sq. Kms.)	49.55	6.09	43.46

(ii) Females	896	873	23

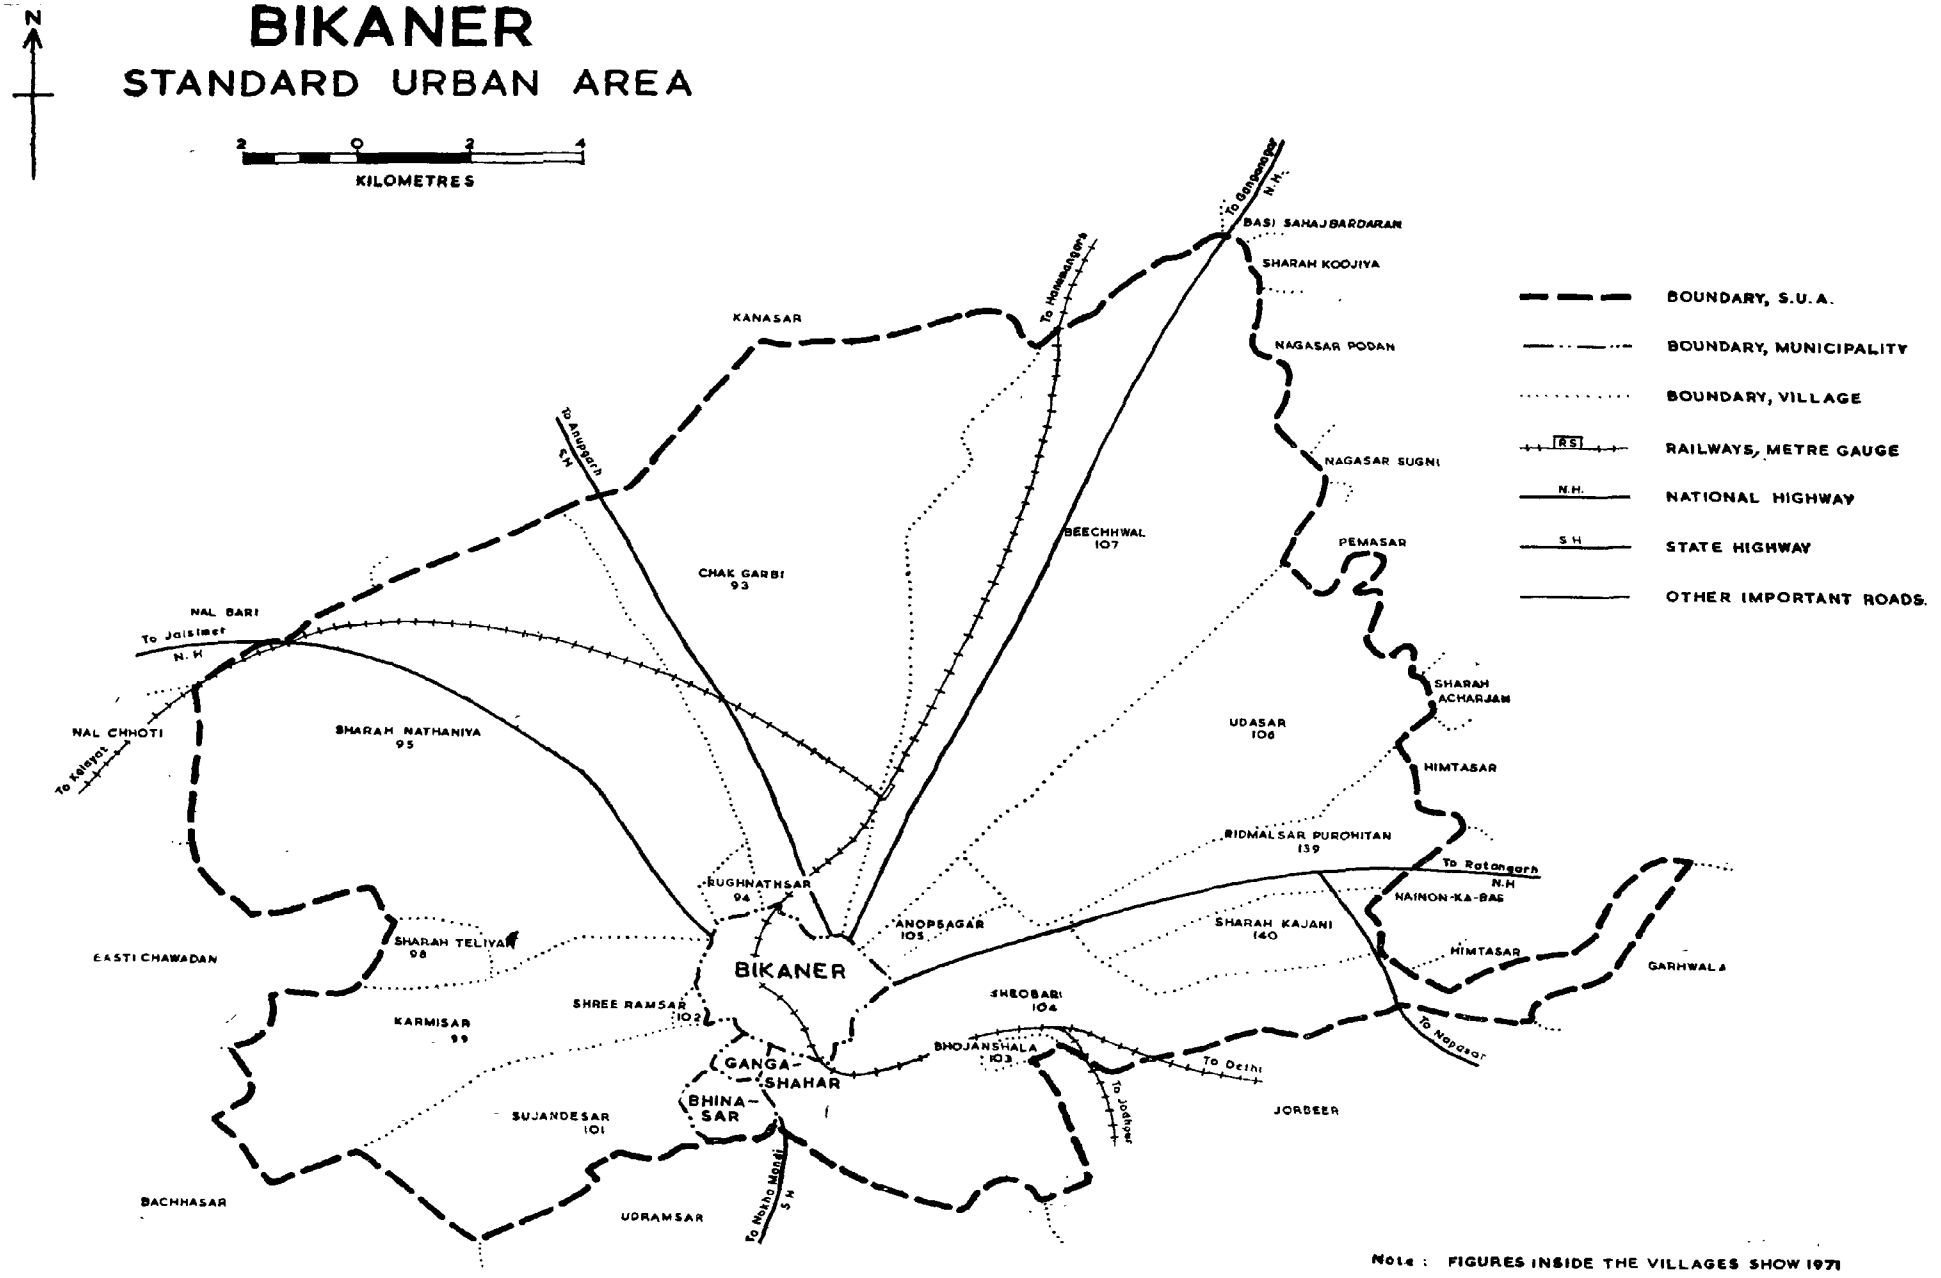

The urban component-Ganganagar town has grown at a rapid rate of 41 per cent during the decade 1961-71. In the earlier decade its growth was phenomenal—75 per cent. The growth of the rural component in 1951-61 was also as high as 62 per cent. Due perhaps to certain migration of population to better lands in the district, however, the growth rate dwindled during 1961-71.

28.1 per cent of the population in this region belongs to the economically active persons. The following statement gives the percentage distribution of the working population of the region by various industrial categories and by its rural and urban components (Appendix at the end may be consulted for detailed description):

Particulars	Industrial Categories									
	I	II	III	IV	V(a)	V(b)	VI	VII	VIII	IX
Total SUA (100.00)	4.60	5.05	0.43	..	3.92	23.45	2.99	23.60	6.58	29.38
Urban Component (100.00)	3.32	3.59	0.34	..	4.03	24.18	3.05	24.44	6.82	30.23
Rural Component (100.00)	38.11	43.15	2.78	..	1.03	4.22	1.44	1.65	0.41	7.21

It will be observed that the main economic activity of this area as a whole is Other Services which engages about 29.4 per cent of the working population. Other important economic activities which engage a sizable number of workers are Trade and Commerce and Manufacturing other than Household Industry which employ 23.6 and 23.5 per cent of the workers respectively. The participation rate of workers in other activities is rather small and varies from 0.4 per cent to 6.6 per cent. Other Services, Trade and Commerce and Manufacturing other than Household Industry are also the main economic activities in the urban component of the area, while Agriculture is the main activity in the rural component.

It has grown into an important mandi in the wake of Gang Canal Project. Further development activities are taking place towards the south-west and south-east of the town.

THE BIKANER SUA

The standard urban area of Bikaner City is composed of three urban and fourteen rural units. It has a total population of 219,178 persons, of which about 95·3 per cent is contributed by the urban components. It comprises of 296.41 sq. kms. of which 79.8 per cent belongs to the rural. The basic particulars of this region are given below :

Particulars	Total	Urban Component	Rural Component

*Bikaner City : 1951-61 (28.6), 1961-71 (25.1)

The main urban component-Bikaner City has grown at a rate of 25 per cent during the decade 1961-71, while Gangashahar and Bhinasar have grown at the rate of 28 and 22 per cent respectively during this time. In the earlier decade their corresponding growth rates were 29, 21 and 25 per cent respectively. The growth in the rural component has however come down due mainly to people migrating to the urban components to seek better amenities.

Nearly 24.1 per cent of the population in this area belongs to the economically active persons. The following statement gives the percentage distribution of the working population of the region by various industrial categories and by its rural and urban components (Appendix at the end may be consulted for detailed description):

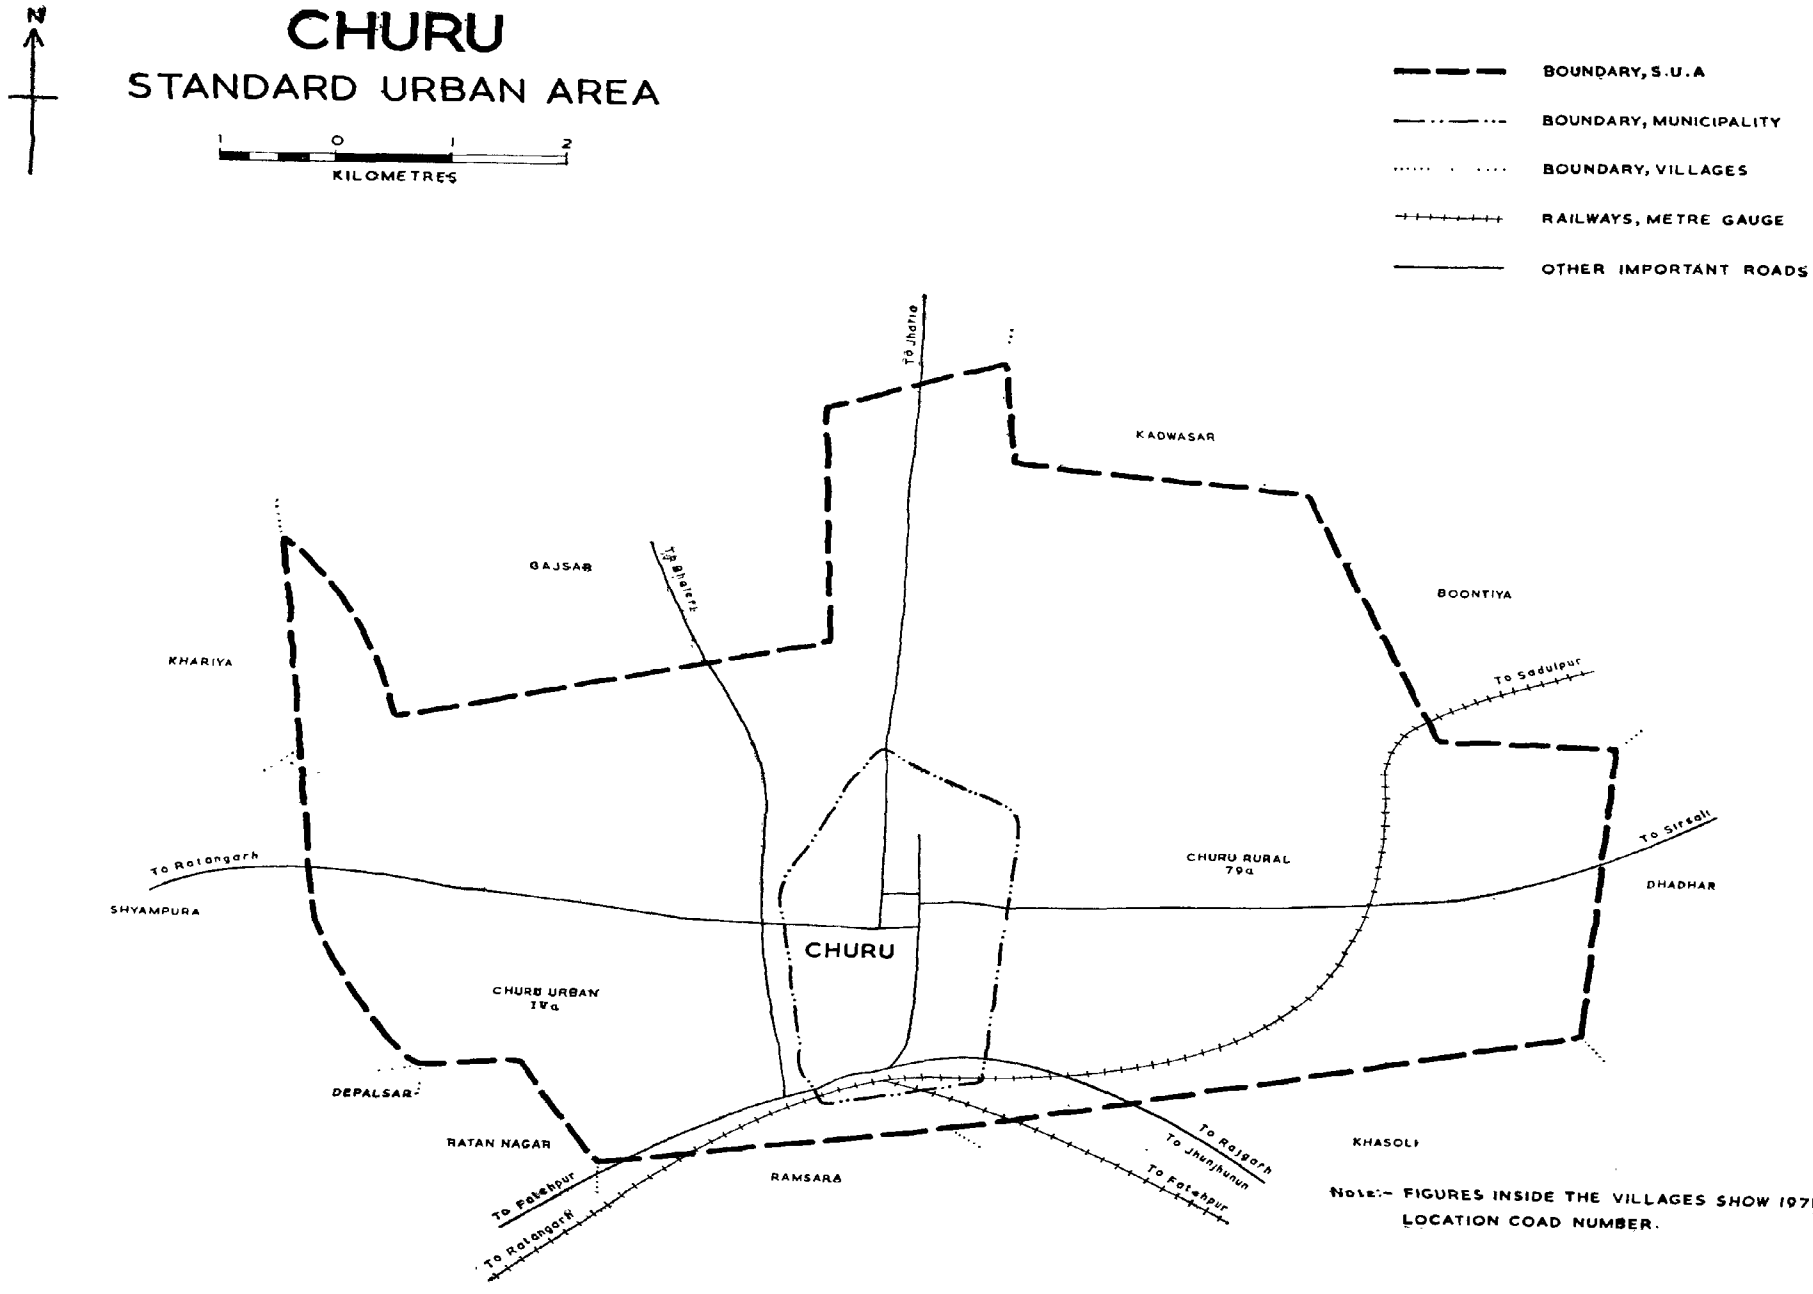

Particulars	Industrial Categories									
	I	II	III	IV	V(a)	V(b)	VI	VII	VIII	IX
Total SUA (100.00)	3.83	3.97	0.63	0.27	5.46	10.40	5.25	17.33	14.00	38 86
Urban Component (100.00)	2.33	2.96	0.60	0.18	5.56	10.57	5.12	17.95	14.46	40.27
Rural Component (100.00)	30.77	22.08	1.30	1.80	3.75	7.40	7.47	6.31	5.59	13.53

It will be observed that the main economic activity of this area as a whole is Other Services which engages about 38.9 per cent of the working population. Other important economic activities that engage a sizable number of workers are Trade and Commerce, Transport, Storage and Communication and Manufacturing other than Household Industry which employ 17.3, 14.0 and 10.4 per cent of the workers respectively. The participation rate of workers in the remaining activities is rather small and varies from 0.6 per cent to 5.5 per cent. The important economic activities which engage a sizable number of workers in the urban component are Other Services, Trade and Commerce, Transport, Storage and Communications, and Manufacturing other than Household Industry. Agriculture is the main economic activity of the workers in the rural component followed by Other Services which accounts for 13.5 per cent.

The town has tended to grow towards north and north-east directions. The ravines present in the west and north-west directions of the town deter its expansion in these directions. With the completion of the second phase of the Rajasthan Canal Project, the city is bound to grow into a big Mandi There appears to be much future for the establishment of grain processing industries, woollen mills and various mineral based industries and industries based on dairy products.

CHURU

STANDARD URBAN AREA

THE CHURU SUA

The standard urban area of Churu town is composed of two units viz., Churu municipal area and its urban outgrowth. It has a total population of 53,185 persons. It is spread over 62.81 sq. kms. The basic statistics of this region are given below :

Particulars	Total	Urban Component	Rural Component
Area (Sq Kms.)	62.81	62.81	..
Total Population	53,185	53.185	—
(i) Males	27,748	27,748	..

Working Population	11,962	11,962	..
(i) Males	11,494	11,494	..
(ii) Females	468	468	..

The main component, the core town of Churu has grown at a high rate of about 26 per cent during the decade 1961-71 as compared to about 4 per cent during the earlier decade.

Nearly 22.5 per cent of the population in this area belongs to the economically active persons. The following statement gives the percentage distribution of the working population of the region by various industrial categories (Appendix at the end may be consulted for detailed description):

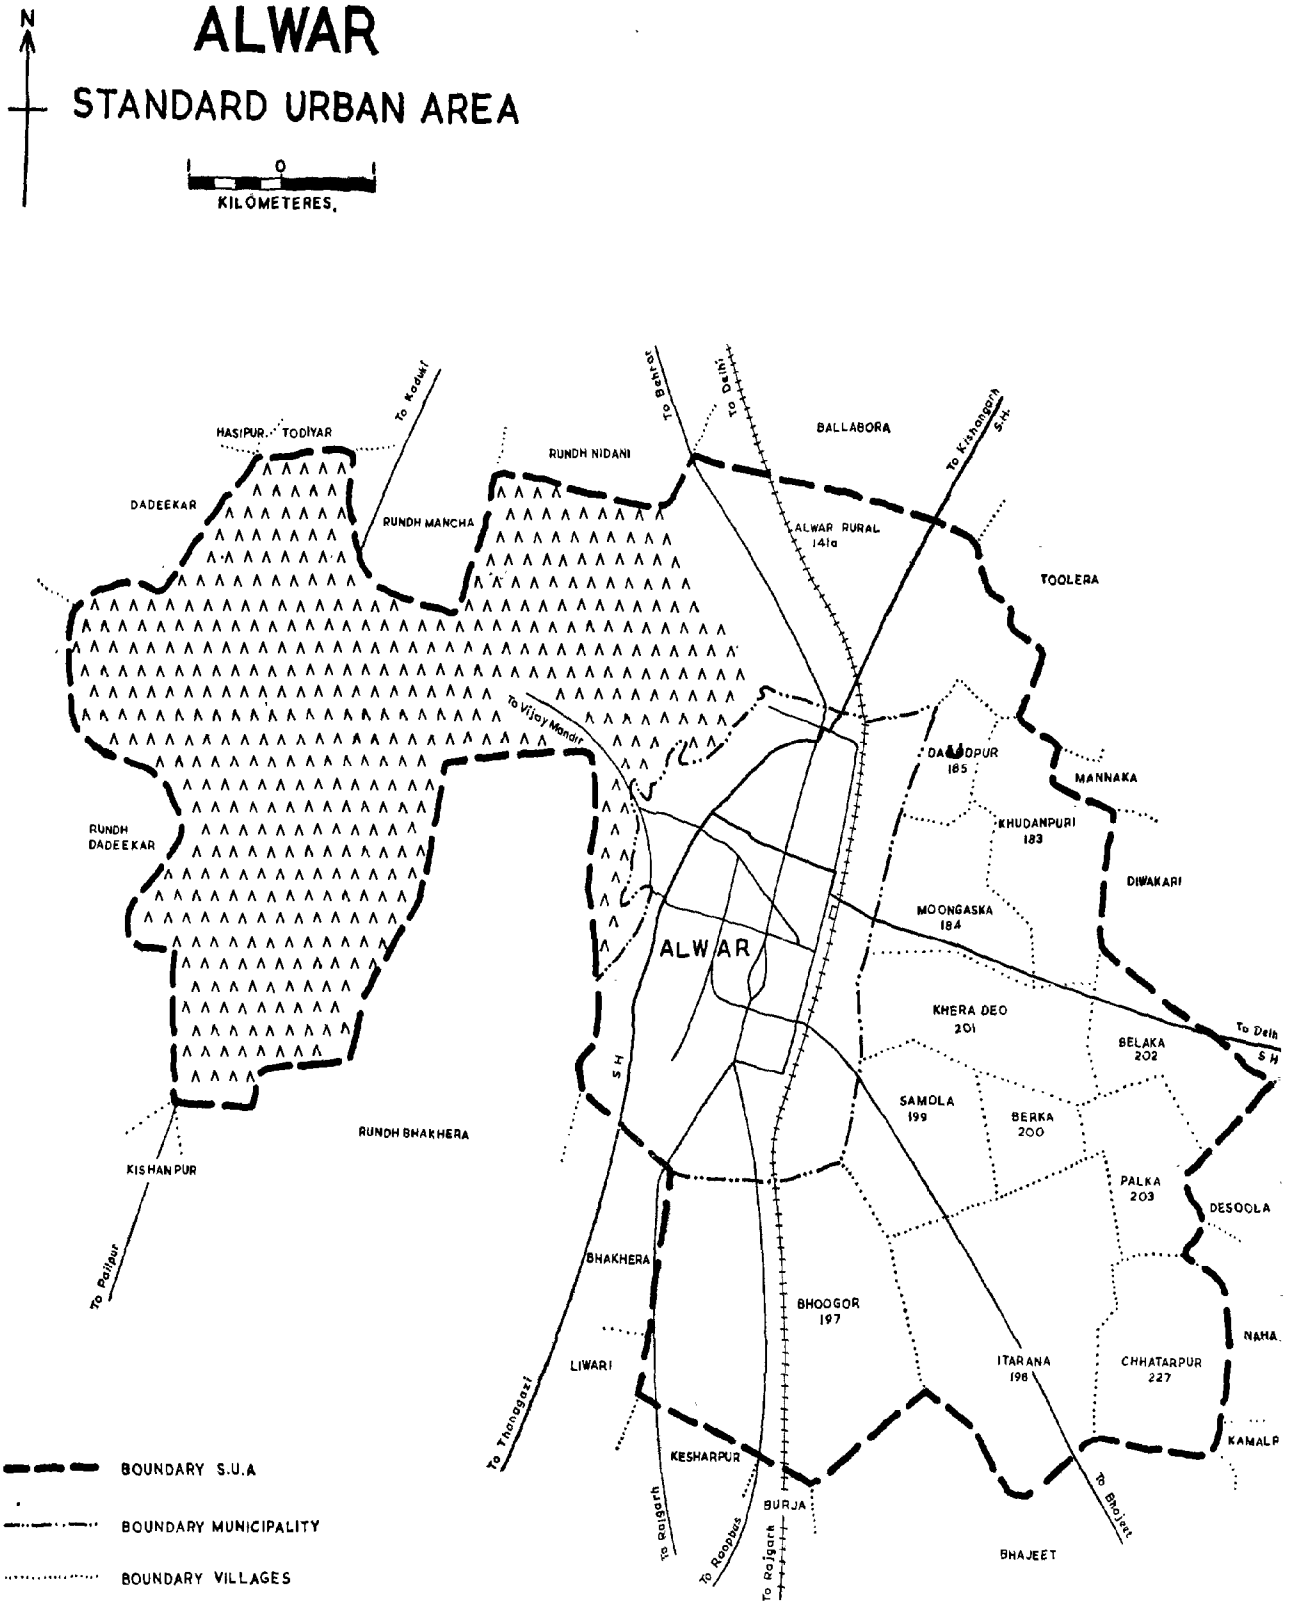

Particulars	Industrial Categories									
	I	II	III	IV	V(a)	V(b)	VI	VII	VIII	IX
Total SUA (100.00)	16.18	3.35	0.93	0.70	10.99	7.13	7.31	18.44	9.92	25.05

Rural Component (100.00)	..	..	..	..	..	..	..	..	..	..

It will be seen that the main economic activity of this region is Other Services which engages about 25.1 per cent of the working population. Other important activities which engage a sizable number of workers are Trade and Commerce and Cultivation, which employ 18.4 and 16.2 per cent of the workers respectively. Apart from these economic activities, about 11.0 per cent are engaged in Household Industry while 9.9 per cent are in Transport and Communication. Participation of working force in other economic activities is rather small.

The town has tended to grow towards the west, south-west, east and north-east. Sand dunes occurring to the west of the town work as barriers for a contiguous urban expansion. There are possibilities for expanding the woollen industry in the town.

ALWAR

STANDARD URBAN AREA

Note:— FIGURES INSIDE THE VILLAGES SHOW THE LOCATION CODE NUMBER.

THE ALWAR SUA

The standard urban area of Alwar City is composed of the urban core and twelve rural units around it. It has a total population of 108,603 persons of which 92.4 per cent is contributed by the urban component. It comprises of 68.63 sq. kms. of which 41.03 per cent belongs to the rural. The basic statistics of this region are given below :

Particulars	Total	Urban Component	Rural Component
Area (Sq. Kms.)	68.63	40.47	28.16
Total Population	108,603	100,378	8,225

(i) Males	25,435	23,342	2,093
(ii) Females	2,129	1,777	352

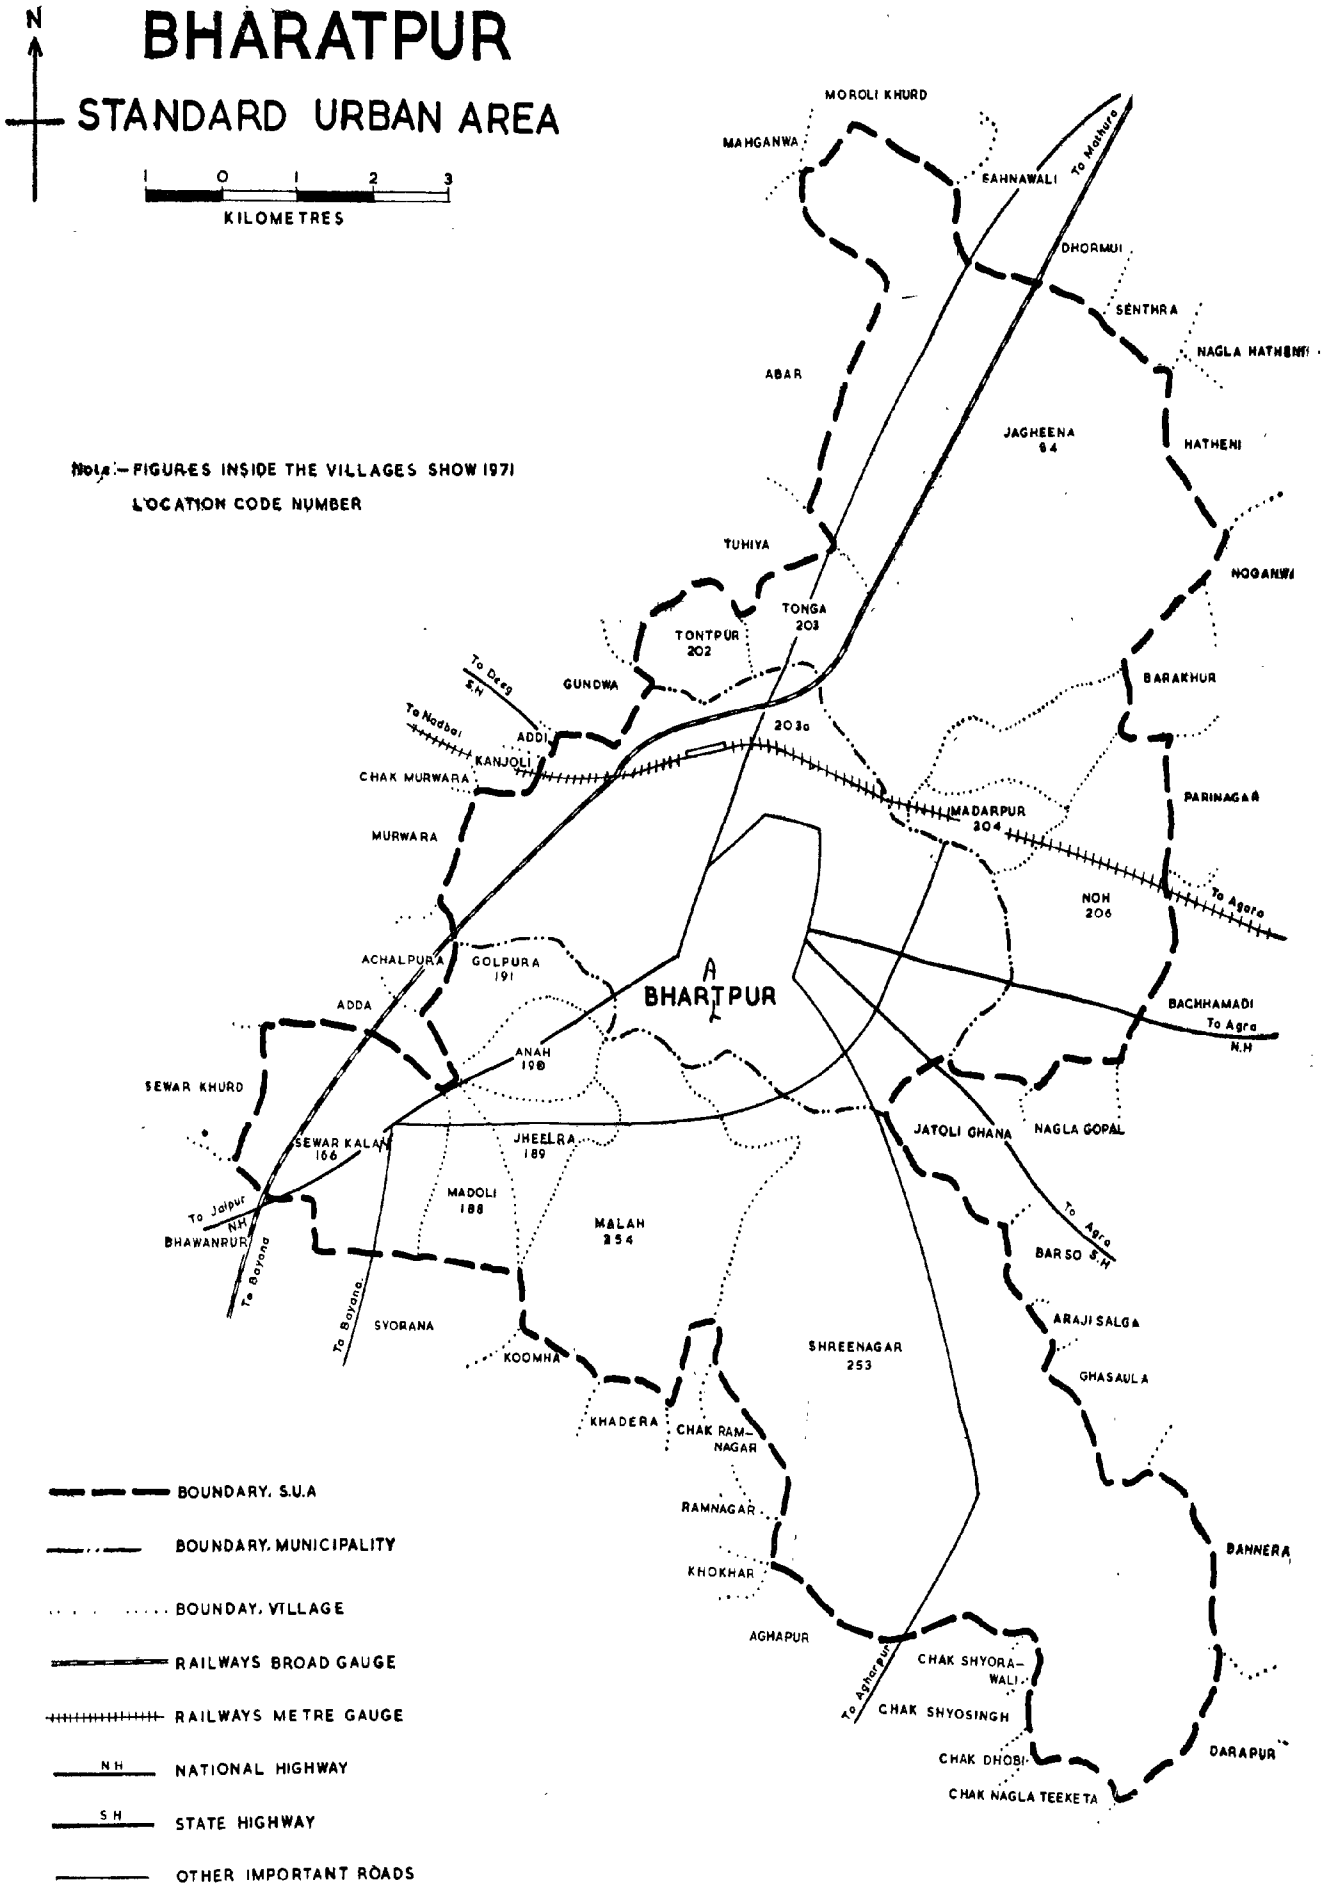

The City of Alwar, the urban component, has grown at a high rate of 38 per cent during the decade 1961–71. It also had a high rate of growth i.e. 26 per cent during the earlier decade.

Nearly 25.4 per cent of the total population in this area belongs to the economically active persons. The following statement gives the percentage distribution of the working population of the region by various industrial categories (Appendix at the end may be consulted for detailed description):

Particulars	Industrial Categories									
	I	II	III	IV	V(a)	V(b)	VI	VII	VIII	IX
Total SUA (100.00)	9.46	2.98	0.62	0.16	7.33	10.06	4.05	19.31	7.28	38.75

Rural Component (100.00)	57.87	10.47	0.74	0.04	4.25	1.31	0.70	1.15	3.97	20.00

It will be observed that the main economic activity of this area as a whole is Other Services which engages about 38.8 per cent of the workers. Other important economic activities that engage a sizable number of workers are Trade and Commerce, Manufacturing other than Household Industry and Cultivation which employ about 19.3, 10.1, and 9.5 per cent of the workers respectively. The participation rate of workers in the remaining activities is rather small and varies from 0.2 per cent to 7.3 per cent. The main economic activities of urban component are Services, Trade and Industry which engage about 40.6, 21.1 and 18.5 per cent of the active population. Agriculture is the main economic activity of the rural component followed by Services.

The development activities are taking place only towards the south and east. The hill ranges in the west and the swampy and marshy land to the north are responsible for restricting urban expansion in these directions. The town lies in the orbit of the National Capital Region of Delhi and is expected to grow fast in the future.

Jaipur City, the main urban component, has grown at a very high rate of 52 per cent during 1961-71. Amber town grew at the rate of 43 per cent and Sanganer, which was treated as rural area in 1961, also recorded a growth of 37 per cent. The growth rate in the rural component during 1961-71 was around 42 per cent as compared to about 40 per cent in the earlier decade. In the earlier decades the growth rates of Jaipur and Amber were only 39 per cent and 8 per cent respectively.

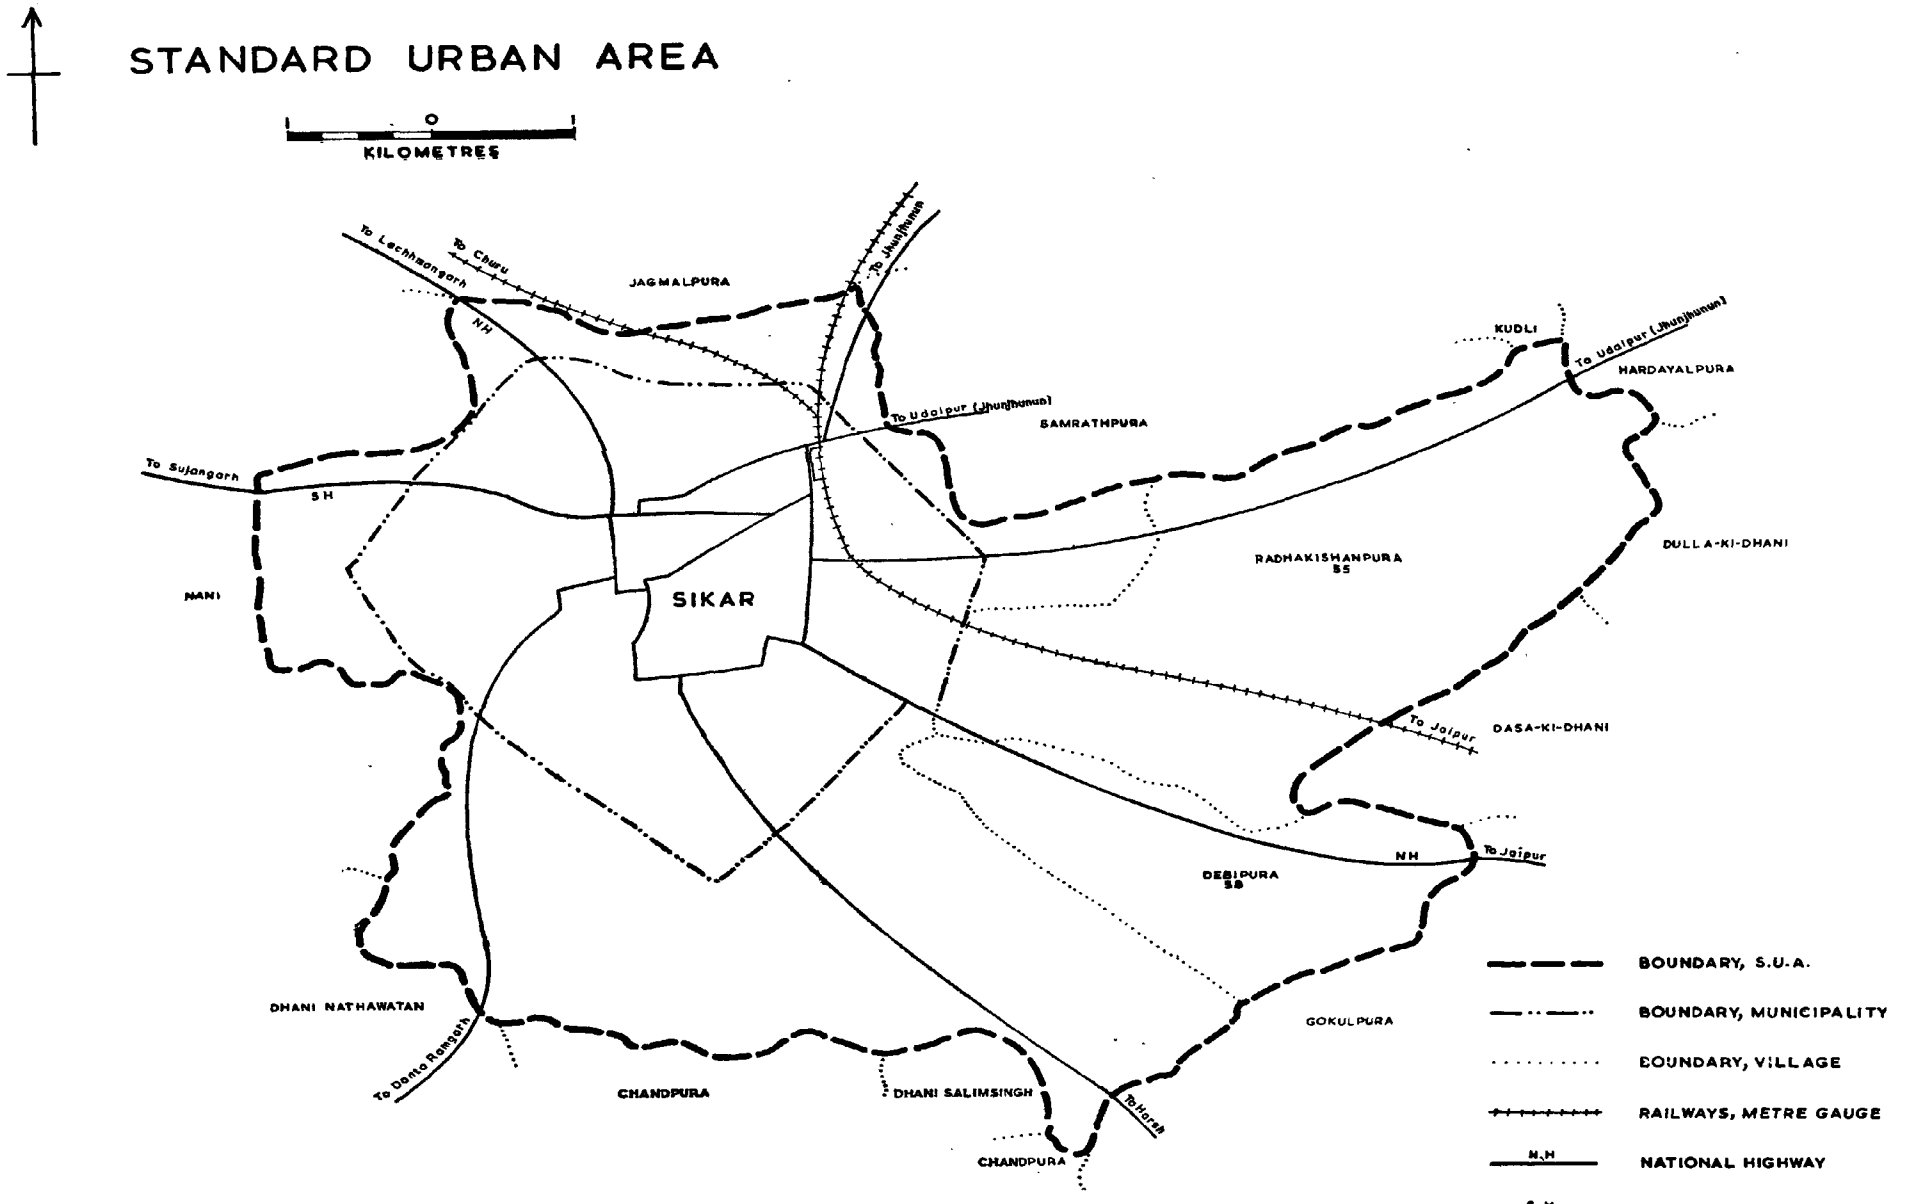

About 27 per cent of the population in this area belongs to the economically active persons. The following statement gives the percentage distribution of the working population of the region by various industrial categories (Appendix at the end may be consulted for detailed description) :

Particulars	Industrial Categories									
	I	II	III	IV	V(a)	V(b)	VI	VII	VIII	IX

It will be observed that Other Services is the main economic activity of this standard urban area as a whole which engages about 34.8 per cent of the working population. Other important economic activities that engage a sizable number of workers are Industry, and, Trade & Commerce which employ about 26.0 and 18.2 per cent of the workers respectively. The participation rate in the remaining economic activities is small and varies from about 0.2 per cent to 8.1 per cent. Other Services followed by Industry and Trade are also the main activities of the urban component. Agriculture is the main economic activity of the rural component and engages about 69.1 per cent of the working population in this area. The participation rate of workers in other economic activities is rather small and varies from 0.6 per cent to 5.0 per cent.

The City has tended to grow mainly towards the south, south-west, and west. Because of the hill ranges, development is restricted in the north, north-east and east directions. The land is being put to commercial and industrial uses along the Jaipur-Sanganer route and a number of industries of the medium and small-scale type are coming up and the city's future growth is likely to be governed by the pace of their development.

The urban component-Jodhpur City has grown at a rapid rate of 33 per cent during the decade 1961-71. Its growth during the earlier decade was about 26 per cent. The rural component had witnessed a very high growth rate during 1951-61 (66 per cent) which dwindled to 17 per cent during 1961-71.

About 24.8 per cent of the population in this area belongs to the economically active persons. The following statement gives the percentage distribution of working population of the region by various industrial categories and by its urban and rural components (Appendix at the end may be consulted for detailed description) :

Particulars	Industrial Categories									
	I	II	III	IV	V(a)	V(b)	VI	VII	VIII	IX
Total SUA (100.00)	4.35	1.33	0.56	2.94	4.68	14.63	4.77	17.09	15.07	34.58

Rural Component (100.00)	76.00	8.93	0.79	1.13	0.49	0.41	0.23	0.64	1.62	9.76

It may be noted that the main economic activity of this region is Other Services which employs about 34.6 per cent of the workers. Other important economic functions that engage a sizable number of working population are Industry, Trade and Transport and employ 19.3, 17.9 and 15.1 per cent of the workers respectively. The participation rate of workers engaged in the remaining activities is rather small and varies from 0.6 per cent to 4.7 per cent. In the urban component still higher proportions are observed in Service, Industry, Trade and Transport. Agriculture is the main activity of the rural component where about 84.9 per cent of the rural workers are engaged. About 9.8 per cent workers of the rural part are also engaged in Other Services.

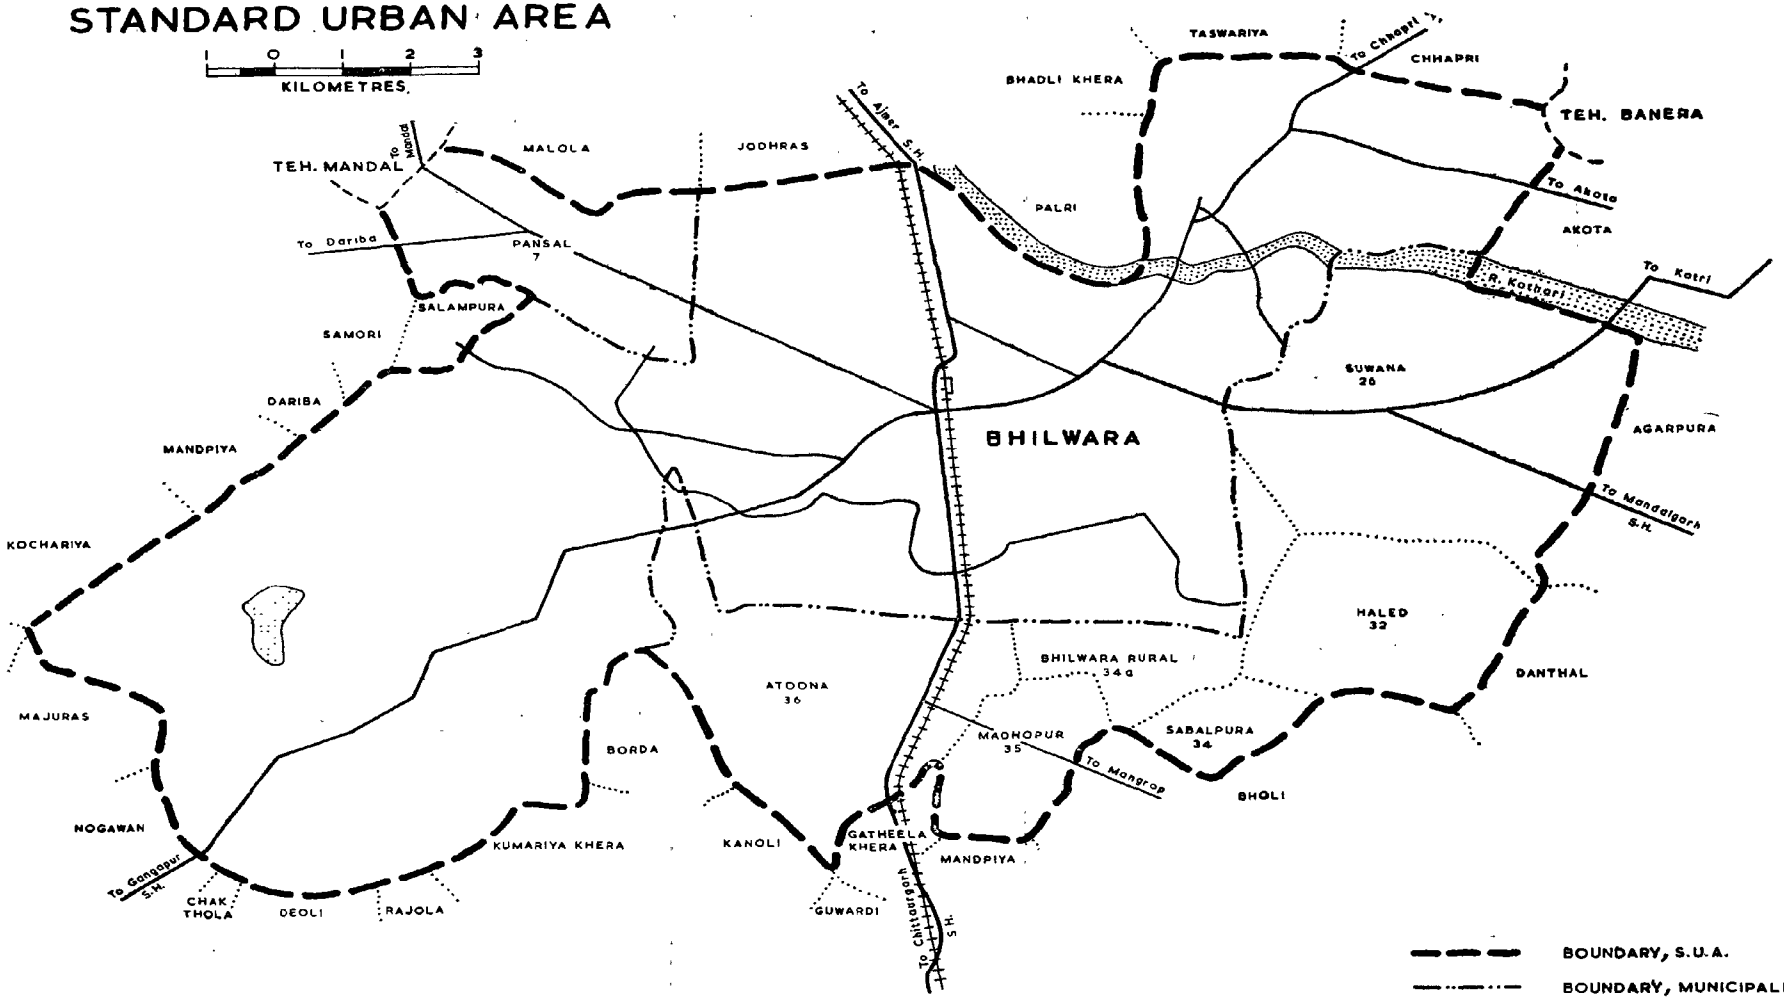

Development activities are taking place towards the north, south, east, south-east, north-east and south-west. Because of the presence of hill ranges to the west and north-west development is restricted on these sides. The town's further growth depends on the expansion of small and medium scale industries.

The urban component-Bhilwara town has grown at a very high rate of 51.3 per cent during the decade 1961–71. Its growth during the previous decade was about 39 per cent. The rural component grew at the rate of 30 per cent during 1961–71 and 23 per cent during 1951–61.

Nearly 33.1 per cent of the total population in this area belongs to the economically active persons. The following statement presents the percentage distribution of working population of this region by various industrial categories and by its urban and rural components (Appendix at the end may be consulted for detailed description) :

Particulars	Industrial Categories									
	I	II	III	IV	V(a)	V(b)	VI	VII	VIII	IX
Total SUA (100.00)	25.98	3.08	1.46	1.14	5.39	21.67	2.06	14.34	3.90	20.98

It will be observed that the main econonmic function of this area as a whole is Agricultural activities which employs about 29.1 per cent of the total working population. Other important economic activities, that engage a notable number of workers are Industry, Other Services and Trade and Commerce which employ about 27.1, 21.0 and 14.3 per cent of the workers respectively. The participation rate of workers engaged in the remaining activities is rather small and varies from 1.1 per cent to 3 9 per cent. Industry is the main activity of the urban component which absorbs about 30.1 per cent of the urban workers. The other important economic activities of this area are Other Services, Agriculture and Trade which engage nearly 23.0, 22.1 and 16.3 per cent of the workers respectively. Agriculture, being the main activity in the rural part, employs about 78.0 per cent of the total rural workers in this area. About 7.3 per cent of the workers of the rural component are engaged in Other Services which is their second important economic activity.

The town has tended to grow in the west and north-west directions. It is also likely to grow to the north. The Kothari river to the north-east of the town and a small canal to the north-west deter expansion in these directions.

There are some medium size industries in the town. The agricultural production of the surrounding area is increasing with the extension in irrigation facilities in the area. A number of agro-based industries are therefore likely to come-up in future.

Agriculture is the main economic activity of the rural components which engages about 60.2 per cent of the working population in this area. Other important economic activity of the rural part is Other Services which employ about 17.4 per cent of the workers.

Famous for its beautiful lakes, palaces and various historical monuments, Udaipur is an important tourist centre. The town has tended to grow towards the east and south-east as there are lakes and hillocks in the west, south-west and south.

The town is expected to grow further with the expansion of the zinc manufacturing industry. Among other possible industrial developments are the establishment of a phosphate plant and a fertiliser plant in the town. Many small scale industries such as rice mills, cotton mills, pottery works, soap-stone factories and rolling mills are also likely to grow in the town.

Other important economic activities are Trade and Transport which employ about 15.4 and 15.1 per cent of the workers respectively. The participation rate of workers in the remaining activities is not much significant and varies between 0.5 per cent to 5.3 per cent. In the urban component, still higher proportions are observed in Other Services, Industry, Trade and Transport. Agriculture is the main economic activity of the rural part which employs about 59.7 per cent of the total working population of the rural component. Other notable activities of this part are Industry and Other Services which employ about 14.8 and 9.2 per cent of the rural working population.

Kota is emerging as an important industrial town of Rajasthan. The town enjoys an excellent location on the Delhi-Bombay broad-gauge line and is well connected by roads. The region being rich in forest and mineral resources, the town has already established a considerable degree of industrial growth with a number of industrial plants located therein such as fertilisers, rayon, synthetics, instrumentation etc. In this process the city has been greatly benefited by the various Chambal valley projects. The development activities are taking place in the south and south-east directions as Chambal river to the west and the Railway track to the north and west deter continuous urban expansion in these directions.
