SUBSIDIARY TABLE 1·3.

(Mean decennial growth rate during three decades—general population)

The mean population of the decades given in columns 2, 3 and 4 has been worked out on the basis of population given in table A-II, while the mean population of decade for area under registration of births and deaths, has been calculated by taking the population of each district as it was in a particular census because the registered births and deaths were not available for different years according to the present set-up of the districts.

2. The registered births and deaths and previous population of the districts of PEPSU, according to their present formation, were not available and hence they have been left out of the table. The registered births and deaths of PEPSU and Himachal Pradesh (including its districts) were not forthcoming, so the relevant columns were left blank.

3. The calculations for the various columns of the table have been made as under :—

Columns 2-4—These are the arithmetical mean of the general population of two consecutive censuses, the population of the earlier census having been recast in the lay-out of the later census for calculating the mean.

Columns 5-7—These are the arithmetical mean of the general population of the area under registration at two consecutive censuses.

Columns 8-10—These are the differences between the general population recast at two consecutive censuses.

Column 11 = 100 × Column 8 ÷ Column 2

Column 12 = 100 × Column 9 ÷ Column 3

Column 13 = 100 × Column 10 ÷ Column 4

Columns 14-16—These are the total number of births in the general population registered during each of the three decades.

Column 17 = 100 × Column 15 ÷ Column 5

Column 18 = 100 × Column 16 ÷ Column 6

Column 19 = 100 × Column 17 ÷ Column 7

Column 20-21.—These are the total number of deaths in the general population registered during each of the three decades.

Column 23 = 100 × Column 21 ÷ Column 5

Column 24 = 100 × Column 22 ÷ Column 6

Column 25 = 100 × Column 23 ÷ Column 7

Columns 26-28 —These are the excess of births over deaths during each of the three decades.

Column 29 = Column 11—Column 26

Column 30 = Column 12—Column 27

Column 31 = Column 13—Column 28

SUBSIDIARY TABLE 4·7.

Progress of cultivation during the three decades.

1. Adjustment of Enclaves has not been given effect to in the area figures for 1951.

2. The relevant figures are taken from the Agriculture Statistics Volume I & II.

The quinquennial averages in respect of the details of the Punjab (I) relate to the years given below:—

1951	...	5 years ending with crop year 1949-50.
1941	..	5 years ending with crop year 1939-40.
1931	..	5 years ending with crop year 1929-30.
1921	..	5 years ending with crop year 1915-16.

3. In Amritsar district the figures of "net area sown" for the quinquennuim of 1951 as well as of 1941 are shown less than the "net area irrigated" which is contrary to the general principle, but these have been made use of for want of better and more reliable data.

4. Figures for the present districts of Pepsu are not available except for which have been worked on the average of years 1948-49 and 1949-50. Pepsu figures have, however, been shown by adding up all the erstwhile states which have been integrated to form Pepsu, as in the case of Punjab.

5. As Mandi, Chamba and Suket were non-reporting States prior to the formation of Himachal Pradesh the 1921, 1931 and 1941 figures for Himachal Pradesh are not available except for Mahasu district (which is equivalent to Simla Hills States minus Nalagarh) and Sirmoor district (which is equivalent to erstwhile Nahan State). The 1951 figures are based on average worked out with the help of 1948, 1949 and 1950. Figures for Himachal Pradesh and Bilaspur Division could only be compiled for 1951-

SUBSIDIARY TABLE 4.8

(Components of cultivated area per capita during three decades).

The figures for the preparation of this table have been taken from sub-table 4.7.

The previous population figures for the districts have been taken on the then lay-out of the districts.

The method used for the preparation of this table is as follows :—

(i) U.S.C. $= \frac{A(1)+A(4) - A(2) - A(3)}{P} \times 100$

(ii) U.D.C. $= \frac{A(2)-A(4)}{P} \times 100$

(iii) I.S.C. $= \frac{A(3)- A(4)}{P} \times 100$

(iv) I.D.C. $= \frac{A(4)}{P} \times 100$

3. The value used in the above formula are :—

Unirrigated single crop (USC), unirrigated double crop (UDC), irrigated single crop (ISC), irrigated double crop (IDC) average net area sown (ACI), average area sown more than once [A(2)] average net area irrigated [A(3)] average net area irrigated more than once [A(4)] value [A(1)] to A(4) used in sub-table 4.7) and population of the particular year (P)

4. The notes to sub-table 4.7 apply to this table also.
