	I. Household (Size and Composition)	104
	II. Livelihood Classes by Age Groups (For sample population)	105
	(For displaced persons)	106
	III. Age and Civil Condition (For sample population)	111
	(For displaced persons)	115
	IV. Age and Literacy (For sample population)	119
	(For displaced persons)	122
	V. Single Year Age Returns (For sample population)	124
	(For displaced persons)	127
7.	D—Social and Cultural Tables—	
	I. (*i*) Mother-Tongue	130
	I. (*ii*) Bilingualism	133
	II. Religion	136
	III. Scheduled Castes, Scheduled Tribes and Anglo-Indians	136
	IV. Migrants	138
	V. Displaced Persons by district of origin and year of arrival in India	147
	VI. Non-Indian Nationals	151
	VII. Livelihood Classes by educational standards	153
8.	F—Tribes by Religion	156
9.	Index of Non-Agricultural Occupations	158

INTRODUCING THE DISTRICT

United Khasi and Jaintia Hills District

The district of United Khasi and Jaintia Hills covers at present an area of 5,533 square miles. On the North it is bounded by Kamrup and Nowgong, on the West by the Garo Hills, on the South by Cachar and the East Pakistan district of Sylhet and on the East by the United Mikir and North Cachar Hills district. It consists of two subdivisions, Shillong (Sadar) and Jowai. On the eve of the inauguration of the Republic of India, the numerous Khasi States in the old district covering an area of 3,788 square miles, were merged with what was previously known as the British territory to form the new district of United Khasi and Jaintia Hills. Subsequently an area of 603·2 square miles known as Block I and Block II in Jowai subdivision inhabited mainly by the Mikirs was detached from Jowai subdivision in November, 1951, to form a part of the new district of United Mikir and North Cachar Hills.

Previously there were altogether twenty-five small Khasi States in this district. The largest among them were Khyrim, Mylliem and Nongkhlaw, the smallest being Nonglwi with a population of 169 at the beginning of the century. These Khasi Chiefs were generally taken from the same family, inheritance going through the female. The appointment was, however, subject to the approval of a small electoral body, and the heir-apparent was occasionally passed over, if for any reason, mental, physical or moral, he was unfit for the position. The electors were generally the mantries or *lyngdohs*, the representatives of the clans forming the State. The Siems were, in theory, independent in disposal of some criminal and civil work. The Deputy Commissioner was in political relations with these chiefs. These States were merged with the regular district on the 26th January, 1950. Under the new Constitution of India, a District Council with wide powers for manging the internal affairs of the tribes, their customs, manners, organization, land rights, education, roads, etc. elected by universal adult franchise is being set up, replacing the District Advisory Council which had no constitutional status, with only an advisory capacity. The new District Council will be the executive and legislative authority in respect of certain specific matters provided for in the Sixth Schedule of the Constitution of India. The area formerly known as British portion of the Shillong Town forms part of the old Khasi and Jaintia Hills District as an administered area under the provisions of the Shillong Civil Courts and Laws Act, 1947 which continued to remain in force under Article 372 of the Constitution. Thus it lies constitutionally outside the autonomous district of United Khasi and Jaintia Hills District which is subject to the provisions of the Sixth Schedule to the Constitution [State Government's Tribal Areas Department Circular No. TAD/R/44/50/7, dated the 31st March, 1951.]

Since June, 1950, a new Department of the Secretariat, called the Tribal Affairs Department, incharge of a Secretary, is created to look after the special interests of this as well as other backward hill districts.

The People

The population of the district is 363,599 against 332,251 in 1941. It thus gives total increase of 31,348 in the past decade (against 42,325 in the previous one). This constitutes almost one-fourth of the total increase in the Hills Natural Division of Assam. This district has the largest population among the hill districts of Assam at all the censuses present or past. With the increase of 43,416 registered by Lushai Hills, this means the next largest increase among the hill districts of Assam. Still it is considerably less than the increase in the previous decade simply on account of the separation of 603 square miles from Jowai subdivision, Blocks I and II, with a population of 22,544 inhabitated largely by the Mikirs included within the new district of United Mikir and North Cachar Hills. If these portions were retained

in this district the total increase would stand at 53,892 by far the highest in this Natural Division, constituting two-fifths of the increase in the entire Natural Division. On the eve of the first Republic Day, the 26th January, 1950, the numerous Khasi States in the old district, covering an area of 3,788 square miles, were merged with the rest of the district, forming the present new and enlarged autonomous unit of the United Khasi and Jaintia Hills district. The district has thus increased at a nominal rate of 9·44 per-cent in the present decade against 14·6 in the previous (mean decennial growth rate being respectively 9·01 and 13·61). As we have seen, the actual percentage rate of increase will be much higher, amounting to 16·2 per-cent if the Jowai Blocks I and II were still retained in the district. This is a very large increase; still it falls below the 1921-31 figure when it gave a record percentage of 19·6. Ignoring the small Balipara Frontier Tract with its unprecedented percentage rate of increase of 49·28 and the newly formed United Mikir and North Cachar Hills district which shows a percentage rate of variation of 24·02 on account of the inclusion of Jowai Blocks I and II, without adjustment of its population in previous census, the district shows a rate of increase which is second only to 28·42 per cent of Lushai Hills. In spite of this large total increase, the density of the district has gone up from 60 in 1941 to 66 only at present, on account of its large area. For a hill area this district has a very high density indeed. Ostensibly Garo Hills has a higher density, which is due to its having several plains mauzas which can easily support a population much dense than a hill area can ever do. Still the density of the district as a whole has increased by exactly 50 per cent. in the last 30 years as it was only 44 in 1921.

The district consists of two Subdivisions Shillong and Jowai. Jowai is a typical hill area while Shillong, containing as it does the State Capital, is in many respects very different. Shillong subdivision has increased at the rate of 20·1 per cent. against 18 per cent in the previous decade while Jowai subdivision shows a decrease of 21·2 per cent against an increase of 5·8 in the previous decade. If the excluded Blocks I and II were still retained in Jowai subdivision, it will give a percentage rate of increase of 5·8, very slightly less than its increase in the previous decade. Shillong subdivision also shows the same tendency as Rural Shillong has increased by 14 per cent against 14·3 in the previous decade. As might be expected, Shillong subdivision has a much higher density of 73 than 45 of Jowai. We see the same difference in the density figures of the previous decade, 61 of Shillong and 41 of Jowai. This, however, is largely due to the presence of the State Capital of Shillong with its population of 58,512 in Shillong subdivision. Taking it out, the density of the rural areas of Shillong subdivision comes down to 59 in 1951 against 52 in 1941.

The estimated real increase of 16·2 is indeed very high as the district is fairly thickly populated for a hill area. The lower hills are malarial and are avoided by the Khasis, the higher regions contain only a limited amount of land suitable for cultivation. Generally speaking, the only increase in cultivation that can be brought about is by an extension of the wet rice terrace system and increasing cultivation of garden crops like potatoes and oranges. After the partition of the State, the Khasis near the Sylhet border have lost the facilities for marketing of their produce, especially their oranges, pan leaves and potatoes in the hats on the Sylhet border and buying rice and poultry in exchange. The action of the Pakistan authorities in often stopping the export of eggs, fish, apart from the usual ban on the export of rice, has caused the people on the border many hardships after August, 1947. The State Government is trying to do its best to provide them with additional facilities, for example, providing air transport for the lifting of Khasi oranges from the border from Shela Air Strip to Gauhati and Calcutta.

The above large percentage increase in the district is due to fairly good public health during the decade and the prosperity brought to the hills during the War years when Shillong had a large military population from which the local people benefitted in various ways. Shillong, the capital of Assam, has increased from 38,192 in 1941 to

58,512, an increase of 53·2 per cent against 43·9 in the previous decade, a rate more or less similar to that shown by Shillong during the decade 1921-31. On account of the ever expanding administrative machinery and the creation of new departments, both Central and State, the population of Shillong is bound to show a steady rate of high increase in future also.

Displaced Persons.—Displaced persons have contributed an increase of 5,990 to the total increase of the district, most of them, 4,698, having settled down in the capital only 1,292 having gone to other areas in the interior.

The more backward Jowai Subdivision is witnessing a rapid improvement of its communication. There is now an all weather motorable road to Jowai from Shillong, which goes right up to Garampani and connected with Silchar *via* Mahur and Haflong. Another road is also under construction, which will connect Jowai with Badarpur by a shorter route. These new roads are expected to open up the interior hills and bring more custom and trade to the hill people.

UNITED KHASI AND JAINTIA HILLS

The whole of the district is composed of hilly country. On the northern and western borders, these hills take the form of tumbled ranges, which run for the most part north and south, and have a general height of two to three thousand feet. None of the hills in the central and southern portion of the district has anything of the rocky or precipitious about them. Their sides are covered with short grass and from one direction or another, they can generally be ascended by a man on horseback. There is a high plateau in the centre of the district, the general level of which is not much below 6000′ feet, though it decreases in height towards the east and west. From Barpani to the Shillong Plateau is a climb of 1800′ feet. From Shillong again, there is a further rise of about 700′ feet to the central high plateau which stretches from there to the latitude of Dumpep and then gradually declines in height to the edge of the hills at Cherrapunji, Shillong Peak being 6450′ feet in height.

Rivers.—The high plateau that traverses the centre of the district is the watershed of the hills. The following are the principal rivers that flow towards the south into the Surma Valley. On the west there is the Jadukata or Kynshi with its principal tributary, the Ka Blei. Further east, come the Um Maopa and the Bogapani which fall into the Surma ; the Umngot or Maheshkhali known as the Pyian Gang in the plains of Sylhet forms for a considerable distance, the boundary between the Khasi and Jaintia Hills. On the north, the principal rivers are the Ka-Khri, (known as the Kulsi in Kamrup), the Digru, the Umiam rising a little to the north of Maoflang and flowing in a deep gorge between the Diengiei Range and the plateau of Shillong, before falling into the Kapili. In the plains it is known as the Killing. Further west, comes the Umkhen which is known as the Barpani in Nowgong. The greater part of the country between the North Cachar and the Jaintia Hills is defined by the Kapili, which pours its waters into the Kalong and so into the Brahmaputra. Its principal tributaries from the west are Um Myntang and the Mynriang. All these rivers possess the characteristics usually associated with hill streams. The beds are rocky and gravelly, the currents swift and after heavy rain even small streams come down in spate. In places the water comes foaming and roaring over huge blocks of granite—in places the river stretches out in still clear pools of blue green water. There are several magnificent cascades in the neighbourhood of Shillong and at Mawsmai, near Cherrapunji, some of the minor streams fall over a sheer precipice many hundred feet in depth into the gorge below.

Places of Interest.—There are several places of interest in the district, which are fairly accessible from the station of Shillong. On the further side of the Umiam, stands the Diengiei hill. There are two routes from Shillong to the summit of Diengiei—one is a foot path which drops straight to the gorge of the Umiam ; by the other route the traveller can drive to Barpani on the Gauhati road, and from there the ascent is much more gradual

and can be negotiated by a car. On a clear day, a magnificent view is obtained during almost the whole of the ascent from Barpani over the rolling Bhoi country lying some 3000 feet below the summit. Dympep, which is close to the high peak of Swer, from which a magnificent view can be obtained on a clear day over the southern hills and plains of Sylhet, is also easy of access. So is Mawphlang, and from Mawphlang there is a charming walk to the gorge of the Bogapani over thousand feet below. The river lies in a series of blue green pools connected with short rapids at the bottom of a ravine which recalls the passes on the Italian side of the Alps. From Maoflang, it is a pleasant trip to the Kyllang rock. The Kyllang rock rises out of rolling grassy downs, a sheer cliff of granite upwards of 700′ feet in height. The effect of this mighty precipice suddenly rising from soft undulating grass land is singular to a degree. Jowai itself is well worth a visit as the path there runs through charming scenery with grassy meadows and woods of oaks. From Bataw, 28 miles south-east of Jowai, there is a magnificent view, on one side over the plains of Sylhet, on the other across the hills and the gorge of the Myntdu. On the summit of the hill, there is a large pond which is almost worthy of the name of lake and the dense orange groves in the vicinity add much to the charms of a scenery already beautiful. There are hot springs at Garampani on the right bank of the Kapili, and interesting caves at Cherrapunji.

A little to the South of Cherrapunji are the falls of Mawsmai, where some of the streams from the plateau are precipitated over a cheer cliff several hundred feeet in depth. Even finer falls are to be seen at Dainthlen and Nob-ka-Likai about two miles to the west of Cherrapunji. There are also very fine cascades in the immediate neighbourhood of Shillong, like the Bishop and Beadon falls and the Sweet and the Spread-eagle falls.

Minerals.—The geological products of economic value are lime, coal, iron and petroleum, by far the most important of which are lime and coal. From the earliest days of British rule, the lime quarries of Khasi Hills formed one of the principal attractions of Sylhet, drawing a large number of Europeans to that district. The lime quarries are situated all along the southern face of the hills from the Lubha river on the east to the Umngot on the west. The lime is burnt all along the banks of the Surma river from Chhatak downwards. The most important quarry is at Gomorrah, which caters to the requirements of the Assam-Bengal Cement Factory, at Chattak (Pakistan). Petroleum has been found in the valley of the Khasimara river on the southern border of the district, a little to the west of Shella. Coal is found both in the cretaceous and nummulitic formations. The largest deposits of nummulitic coal are found at Cherrapunji, Laitryngew, Mawlong, Mustoh, Mawsynram, Mawdon, Thanjinath, Lakadong and Narpo. Cretaceous coal is found at Maobehlarkhar (near Maoflang), Barsora (near Laur), Wapung. Leukensuiet and in the Langrin field on the Jadukata river.

Climate and Rainfalls.—The district enjoys the distinction of containing Cherrapunji, the wettest place on the surface of the earth. The average annual rainfall at Chertapunji, a village on the southern face of the hills is no less than 460″. Enormous though the rainfall is, it is little more than half of the maximum on record. In 1861, 905″ fell—366″—in July alone. The maximum for a single day was, recorded in 1876,—41″, in 24 hours. April is a drier month than is usual in this State and more than five-eighths of the total rainfall is precipitated in the four months, June to September. The climate of the higher hills is exceedingly salubrious. Even on the hottest days in summer, the thermometer in a bungalow in Shillong seldom rises above 80°F.

Shillong, though only 30 miles distant from Cherrapunji, where the greatest recorded rainfall in the world is found, has the clouds drained of their humidity long before they reach it by the immense precipitation along the southern edge of the plateau and in the central table land, which lies some 1,000 feet above the site of the station. As a result, Shillong has normally only 85 inches of rain, a figure which is comparatively low for Assam. Cherrapunji, on the other hand, is so placed as to exemplify all the conditions needed for a great rainfall. The hills at this point rise straight from the plains. It stands, immediately

overlooking the plains at a height of 4,455 feet, on a small plateau of thick-bedded sandstones, bounded on two sides by 2,000 feet of sheer descent, which close in gorges debouching southwards on Sylhet, which is practically at sea-level. The south-west monsoon, sweeping over the flooded tracts of East Bengal and Sylhet, blows up these gorges, as well as on the southern face of the general scrap, and having reached the heads of the gorges, ascends vertically, having been previously stopped by this barrier of cliffs. The air which is saturated with moisture rises, cools and is precipitated in the form of rain. Cherra is thus during summer months surrounded, or nearly so, by vertically-ascending currents of saturated air, the dynamic cooling of which is the cause of the enormous precipitation. It lies, moreover, at the elevation of 4,000 feet, which is found in the Himalays to be that of maximum precipitation. The annual average varies greatly in different parts of the station, although the whole extent of the plateau is not much more than a couple of square miles. Less than 5″ of rain ordinarily falls in the four months of November to February, and nearly 300 in the months of June to August. In spite of its enormous rainfall, Cherra is neither an unhealthy nor an unpleasant place of residence. The plateau is admirably drained and the water is quickly carried off. Much of the rains falls at night and the number of hours of sunshine is considerable.

Earthquakes: The Khasi Hills, like the rest of Assam, is a seismic area and slight earth tremors are so common as to excite little attention. Considerable damage was done to the houses by a shock which occurred in September, 1875. Widespread havoc was wrought by the great earthquake of June 12, 1897. This earthquake was felt over an area 1·75 million square miles from Rangoon on the south-east to Kangra on the north-west and serious damage was done to masonry buildings over an area of ·15 million square miles. The area of maximum disturbance was a tract of country of the shape of cocked hat, whose base line ran from Rangpur to Jaintiapur, while the top of the crown was near Barpeta. The first shock was felt at Shillong about 5-12 p.m. Every masonry building in Shillong was levelled with the ground. Government House was converted in a few second into a heap of stones and the Chief Commissioner and his wife, who were seated in their dog-cart under the porch, but narrowly escaped from death. In spite of the collapse of every masonry building there were only 29 deaths in Shillong, 10 of which occurred in the Secretariat Press. The sufferings of the people who had suddenly been rendered homeless were increased by the inclemency of the weather. Rain fell continuously for 24 hours and people were compelled to seek shelter in huts, outhouses and stables. Food, clothing, bedding' etc. were buried under heaps of stones and there was complete, though temporary, dislocation of the water supply. Outside Shillong, there were 887 deaths, most of which occurred in the villages which are situated in the deep valleys amongst the southern hills. These casualties were principally due to the falling of the hillsides which carried the houses with them or burried them in a shower of rocks and earths. The villages in which the mortality were highest were Shella (117), Laitiam (86), Nongwar (59), Cherapunji (31), Mosmai (27) etc. The station was soon rebuilt and in a very short space of time there was nothing to suggest that such a thing as earthquake had ever taken place.

Fauna.—The fauna of the district includes elephants, mythuns, buffaloes, tigers, leopards, bears, wild pig and wild dogs, the serow and four kinds of deer. Small game includes duck and teal in the lower valleys, black partridges, jungle fowl, wood cock and the snipe. Elephants are captured either in *kheddahs* or by *mela shikar*

According to Dr. Hooker, the Khasi flora is, in extent and number of fine plants, the richest in India, and probably in all Asia. He and his companion collected upwards of 2,000 flowering plants within ten miles of Cherrapunji, in addition to 150 ferns, and a profusion of mosses, lichens, and fungi.

Forests.—The United Khasi and Jaintia Hills exhibits a varied Flora reflecting the variation in the physical features, configuration of the ground, edaphic factors and climatic gradient and from the forest point of view it can be roughly classified into three zones, *viz.*,

(1) The Pine zone covering areas between 2,500'-6,200' elevation. The main species in this region is Pine (Pinus Khasya) which is found along with its associates like birch, schima, oak, beech, magnolia and other miscellaneous trees. Azaleas and Rhododendrons grow wild and many kind of beautiful orchids are found in the woods. (2) The dry grassy belt covering the lower slopes roughly between 500'-2,500' elevation which form the ideal ground for graziers. The forest growth found here is of a dry type. (3) The Evergreen hard-wood zone which forms a belt along the foot-hills which contains useful hard-wood species of which Sal (Shorea Robusta) is the most important. Other valuable trees found are Nahor, Cham, Chap, Gomari, Bola, etc.

There is about 170 sq. miles of area under Reserved Forest in this District. The rest of the Forests belong either to private owners or the Khasi States. Government exercise control and management over these Forests but under the new constitution, this power has been transferred to the District Council except over those forests, which have been constituted into regular Reserve Forest before the Constitution came into force.

Up till now the main source of Forest Revenue in this District is from Timber, Lime-stone, Lac, Tezpat, and Elephants. The Revenue position considerably improved after the District had been constituted into a regular Forest Division in 1944 and the average income at present is about 3 lacs of rupees per annum as against one lac when the control vested in the Deputy Commissioner. It can improve still further if roads are constructed into the interior, rather inaccessible parts, where more valuable forests of the district are situated. Reafforestation, which was badly neglected in the past, is now the normal programme of the Forest Department and up to now 400 acres of plantations have been established to replace poorly stocked and over-exploited forest areas, generally in accessible places.

Trials conducted for the best part of a hundred years, first under the aegis of the Superintendent, Botanical Gardens, Calcutta, and later by the Forest Department, Assam, have established beyond doubt the possibility of raising Cinchona on a commercial scale in the Khasi Hills. Since 1934, efforts to establish cinchona plantations have been concentrated in the Khasi Hills along the Gauhati-Shillong road. The species favoured is " cinchona leogeriana " and to-date about 600 acres have been planted up. The target at present is 1,000 acres, which is considered sufficient for setting up a small quinine factory.

The Khasi pine (Pinus Khasya) yields an important forest product resin which is reported to be of the best quality, yielding a high grade oil of turpentine. Resin-tapping operation has now started in the Shillong Pine Forest and a plant for the manufacture of turpentine is being installed.

Another commercial species which is being experimented with is Wattle (Acasia species) which produces the valuable bark for tanning leather and grows well in the hills over 3.000 feet elevation. As it can be grown along with potato cultivation, it is a particularly suitable crop for the hill-people.

Jhuming is still causing progressive destruction of Forest cover and is responsible for soil erosion all over Assam. The Jaintia Hills are a welcome exception, where the cultivator spares no pain to secure full stocking of uncultiviable land with Pine Forests along side his well terraced paddy fields. The forest sense of these hillmen is an outstanding example to the rest of Assam in general and to the other hill tribes in particular.

HISTORY

The British were first brought into relations with the Khasis by their occupation of Sylhet. The hillmen seemed to have lived in a state of intermittent warfare with the Muslim fauzadar of Sylhet and they did not abondon this practice even when that district passed into the possesion of the British. The magnificent lime quarries in the hill near Cherrapunji attracted European traders to Pandua near modern Bholaganj. Taken as a body, these men were hardly calculated to raise the prestige of Englishmen in the eyes of the mountaineers and some of disturbances which occurred are ascribed by the

Collectors of Sylhet to their injudicious conduct. Raids and murders were by no means uncommon and the Khasi problem was one of the most troublesome questions which confronted the Collectors of Sylhet at the beginning of the nineteenth century.

When war was imminent between the British and the Burmese, Mr. David Scott, the Agent to the Governor General on the North-East Frontier, entered into an agreement with the Jaintia Raja. In 1824, he marched from Sylhet into the Brahmaputra Valley across the Jaintia Hills. After the cession of Assam to the British by the treaty of Yandaboo, the linking up of the Brahmaputra and the Surma Valleys by a road across the hills became a question of considerable importance. In 1826, Mr. Scott won over the Siem of Nongkhlaw to his side, who induced the inhabitants of the States concerned to authorise the construction of a road across the hills. A chance remark let fall by a chaprassi aroused the suspicion of the Khasis who committed an outrage on the road building party, killing two British Officers and their 60 followers. Punitive measures followed quickly in its wake. Troops were hurried up from Sylhet and Assam and the Khasis were defeated and dispersed. They soon made their submission. By 1833, the last of the important Siems, Tirot Sing, tendered his submission, and agreements were entered into with Khasi Chiefs. There are altogether 25 of these little States in the Khasi Hills.

The Jaintia Parganas in the plains of Sylhet were annexed in 1835 as it was found impossible to obtain adequate satisfaction from the Raja for the murder of 3 British subjects. When deprived of his territories in the plains, that potentate resigned his possessions in the hills as well and the Jaintia Hills were accordingly incorporated in the territories of the Company. In 1860, the decision to impose a house-tax led to some risings in the Jaintia Hills. Thereafter an European officer was stationed in the hills and the Jaintias gave no cause for anxiety to the administration.

The subsequent history of the district is uneventful. The only incident of importance that occurred is the great earthquake of 1897, which has already been described at some length above. After the suppression of the Khasi rising in 1833, the headquarters of the hills were located at Cherrapunji. It remained as such till 1864 when they were removed to the drier plateau of Iewduh at the foot of the Shillong Range. In 1874, when Assam was formed into a separate province under a Chief Commissioner, Shillong was selected as the headquarters of the new administration.

Archæology.—There are no remains of archæological interests in the hills, apart from the memorial stones of the Khasis. The Khasi monoliths are a prominent feature in the landscape in almost every portion of the district. They are generally arranged in rows, varying in number from three to nine. The centre stone is invariably the tallest and is sometimes crowned with a piece of stone, the size and shape of a plate. A flat table like stone, supported on small pillars, about one foot high, is placed in front of each group of the three monoliths, and for each extra pair of monoliths, there is an additional flat stone. Some of these monoliths are of enormous size. At Nartiang, there is a stone which is 26′-6″ by 6′-9″ by 2′-3″. These memorial stones fall into three classes—those which are erected by the family or clan in memory of their ancestors, those erected by children in honour of their parents or those erected near roads and markets as resting places. They are generally placed near paths where they will be continuously in the public eye and are often far away from the places where the ashes of the person in whose honour they have been erected are buried.

THE KHASIS

The Khasis and Jaintias are a short and sturdy race totally distinct from the neighbouring hill tribes. Comparative philologists and enthnologists have traced the relationship which exists between the Khasis and certain peoples of the South East Asia, the chief representatives of whom are the *Mons* or Talaings of Pegu and Tenasserin, the Khmers of Cambodia and the majority of the inhabitants of Assam. Their nearest kinsmen have been discovered to be the Palaungs, a tribe inhabiting one of the Shan States

to the north-east of Mandalay on the middle Salween. Later the relationship of the Khasi language has been traced not only with the Mon-Khmer languages, but also to Nicobarese and several dialects spoken by some tribes in the Malay Peninsula.

The colour of their skin is usually brown, varying from dark to a light yellowish brown, according to locality. Many Khasi women possess that pretty 'gipsy' complexion which is seen in the south of Europe among the peasants. Eyes are of medium size, generally obliquely set, and black or brown in colour. In the Jaintia Hills hazel eyes are not uncommon, especially amongst females. The Khasis are usually short in stature with bodies well-nourished and the males are extremely muscular. The children are frequently remarkably pretty. The people are cheerful in disposition, and thoroughly appreciate a joke. A Khasi is fond of nature, loves a day out in the woods. They are industrious, fond of music and dancing. Dancing forms the principal part of all the Khasi festivities and is an important adjunct of some of the religious ceremonies. One of the greatest festivals in the Khasi Hills is the Nongkrem Dance. It may be said to be as important an event to the Khasis as Beh-dieng-khlam festivities are to the Syntengs. The Khasis have many sports but the principal sport which may be styled their national sport is archery and is a very popular form of recreation among them, the sport being indulged in from about the beginning of January to the end of May each year.

Occupation.—The greater proportion of the population subsists by cultivation. The staple crops raised by the Khasis are wet and dry rice, various kinds of millets, maize, potatoes, cotton, pineapples, oranges, betel-nut, pan, and bay leaves and in the gardens round their houses vegetables, pulses and occasionally sugar-cane. Potatoes are extensively grown in the higher slopes and in the lower land which has been well drained. They were first introduced in 1830 by Mr. David Scott and were much appreciated by the Khasis. Generally two crops of potatos are raised in the district. Oranges are grown along the southern base of the hills and on the border of the Garo Hills. The plantations extend from the foot of the hills to a height of about 1,500 feet. A few trees are grown in the neighbourhood of Shillong but at this elevation they do not grow well. Betel-nut is a profitable crop and ranks in importance with oranges and pan. It is grown along the southern face of the district up to an elevation of 1,500 feet. The ordinary agricultural implements of the Khasis are a hoe with a short handle and a triangular head, affixed not at a right but at an acute angle to the shaft, a sickle, 3 or 4 kinds of daos or bill-hooks, a harrow, a crow-bar which is used for the construction of irrigation channels, sieves and winnowing baskets. The plough used by the Jaintiyas resembles the one in use in the plains of the State. The livestock of the Khasis consists of cattle, goat, pigs and poultry. Cattle are only kept for meat and for their manure, the Khasis leaving all the milk to the calf. Considerable quantities of honey are consumed and sold in the Khasi Hills. The Khasis have succeeded in keeping nearly the whole of the trade of the district in their own hands which in itself must be a considerable source of wealth to them. They are enterprising and industrious and are not hampered by that spirit of conservatism which in many parts of India is so fatal to all progress. They are keen traders and many tribesmen earn their living by travelling round to the markets held at different places in the district. The manufactures of the Khasis are few in number and do not show any tendency to increase. They include the manufacture of earthen ware pottery, iron implements, baskets and mats, jewellery and cotton cloths. No census of small Industries was taken in this district.

Food and Dress.—The staple food of the people are rice and curry. They also consume considerable quantities of dried fish and are fond of most kinds of meat and more specially of pork. Some of the Syntengs abstain from beef, but the Khasis have no scruples on the subject. Milk, like the rest of the hill tribes, they will not touch. They are inveterate chewers of supari and the pan leaf (when they can get the latter), both men women and children ; distances in the interior being often measured by the number of betel-nuts which are usually chewed on a journey. The ordinary village man wears a small kilt, a sleeveless coat and a cloth cap with peaks in front and at the rear. Khasi women wear a narrow cloth as under-clothing, a striped cloth tied round the waist and another cloth

with a fringed border knotted on both the shoulders. As a people they may be said to be fond of jewellery. The women are specially partial to gold and coral bead necklaces.

Their villages and houses.—Unlike the Nagas and Kukis, they do not build their villages on the extreme summits of hills, but a little below the tops, generally on small depressions, in order to obtain some protection from the strong winds and storms which prevail in these hills at certain times of the year. They build their houses fairly close together and seldom change sites of their village to which they are very much attached and where, as a rule, their family tombs, memorial stones are standing. In many villages stone cromlechs and memorial stones are to be seen, which from their appearance show that the villages have been there for many generations. Their houses are. as a rule, substantially thatched cottages with plank or stone walls and raised on a plinth some 2 to 3 feet from the ground. The Jaintiyas plaster the space in front of their houses with red earth and cow-dung, this custom being probably a remnant of Hindu influences. The houses of the well-to-do Khasis of the present day in Shillong, Cherrapunji and Jowai are built after the modern style with iron roofs, chimneys, glass windows and doors.

Social Organisation.—"Their social organisation presents one of the most perfect examples still surviving of matriarchal institutions carried out with a logic and thoroughness which, to those accustomed to regard the status and authority of the father the foundation of society, are exceedingly remarkable" (Sir Charles Lyall). The clan and not the individual is the unit of the society in which the eldest maternal uncle is the head. Not only is the mother the source, and only bond of union, of the family: in the most primitive part of the hills, the Jaintia country, she is the only owner of real property, and through her alone is inheritance transmitted. The father has no kinship with his children who belong to their mother's clan, what he earns goes to his own matriarchal stock, and at his death his bones are deposited in the cromlech of his mother's kin. In the veneration of ancestors, which is the foundation of the tribal piety, the primal ancestress (Ka Iawbei) and her brother are the only persons regarded. The flat memorial stones set up to perpetuate the memory of the dead are called after the woman who represents the clan and the standing stones ranged behind them are dedicated to the males kinsmen on the mother side. In harmony with this scheme of ancestor worship, the other spirit to whom propitiation is offered are mainly female, though here male personages also figure. The power of sickness and death are all female, and these are those most frequently worshipped. The two protectors of the household are goddesses.

Religion:—The Khasis, believe in the Creator, U Blei Nong-thaw,

" The Religion of the Khasi has often been misu derstood and existing descriptions are inaccurate and sometimes misleading Gordon in his monograph is wrong in saying that the Khasis have got a vague conception of God and that, due to the influence of the matriarchal system, He is frequently given the attitude of the feminine gender. To the Khasis God is neither masculine nor feminine. He is a formless being but all-powerful. They believe it is a sin to symbolise God, for since the beginning none has seen him. They believe in one God who is the Lord Creator of all and is omnipresent. They believe in a future state and that the spirit of the dead go to the house or garden of God. The Khasis cremate the dead—ashes are collected and offerings are made to the departed soul ".

A large number of Khasis have been converted to Cristianity by the efforts of the Welsh Calvinistic Methodist, who opened a Mission in the hills in 1841. The Mission runs at present a magnificent hospital at Shillong, which as run by its able directors has proved one of the greatest blessings to all and sundry in the district from the highest officials to the lowliest among the low.

Marriage.—At a marriage the parties are pronounced man and wife in the presence of their friends, and a feast usually follows. The essential part of the ceremony consists of the mixing of liquor from two different gourds, representing the two contracting parties, and the eating by the bride and groom out of the same plate. The bride at first remains in her mother's house where she is visited by her husband but when children are born, the parents, set up house-keeping together. As long as the wife lives in her mother's house

all her earnings go to her mother who expends them on the maintenance of the family. Only after the wife leaves her mother's house she and her husband pool their earning which are expended for the support of their family. There is no evidence to show that polyandry ever existed among them. Certainly at the present day they are monandrists. Polygamy does not exist among the Khasis. The various sub-tribes of the Khasis are more endogamous than exogamous. As the clans are strictly exogamous the Khasis cannot take a wife from his own clan. To do this would entail the most disastrous religious as well as social consequences. For to marry within the clans is the greatest sin a Khasi can commit and would cause excommunication by his kins folk and the refusal of funeral ceremonies at death and his bones would not be allowed a resting place in the sepulchre of the clan. There is no custom of hypergamy. Divorce is in certain cases effected by a public declaration coupled with the presentation by the men to the women of five cowries or copper coins which she returns to him with five similar coins of her own. He then throws them away and the whole ceremony is complete. The public proclamation is occasionally dispensed with and the marriage is dissolved by the simple tearing away of a pan leaf. Adultery or intercourse prior to marriage is uncommon. Marriage in fact is merely a union of sexes, dissoluble at will and the have no temptation to people embark on secret intrigues. Adultery is moreover regarded with extreme disfavour and according to the Khasi code of morals, there is only one thing worse and that is to marry in one's own clan. A widow is allowed to re-marry but not into the family of her late husband a practice exactly the converse of that prevailing in the Garo Hills. Infant marriage is practically unkown.

Language.—The principal languages spoken in the district are Khasi and Jaintia, the latter is closely akin to it. They are said to belong to the Monkhmer family to which Mon-Palaung and Wa belong. At present day these languages are spoken in Pegu, in the hill country near the Mekhong and in Cambodia. In Assam this special form of speech is only found in the Khasi and Jaintia Hills and nearly all the other primitive languages with which it is surrounded belong to the great Bodo family. The Khasi language, however, is the only member of the Monkhmer family which possesses a grammatical gender distinguishing all nouns as mascular and feminine and here also the feminine nouns immensely preponderate.

The Khasi Memorial Stones.—An extremely remarkable feature of Khasi usage is the custom which prevails to this day of setting up great memorials of rough stone, of the same style and character as the *menhirs* and *cromlechs* which are found in Western Europe, Northern Africa and Western Asia. The Great Earthquake of 1897 overthrew many of the finest of these megalithic monuments, but several still remain, and of these Major Gurdon has given an excellent description with an explanation of the different forms which they assume and the objects with which they are erected. Other races in India besides the Khasis set up stone memorials, but none perhaps to the same extent or with the same systematic purpose and arrangement.

For a fuller description of this fascinating tribe, the curious reader is referred to Major Gurdon's monograph on "The Khasis".

INTRODUCING THE STATISTICS

In the past, village statistics for each district used to be printed after the Census, giving the population of each village and showing the distribution of communities and of literate persons. In view of the importance of the 1951 Census, at which in addition to the usual population data, valuable information was collected concerning the social and economic life of the people, it was decided to publish a District Census Handbook containing the more important Census abstracts and tables.

The Primary Census Abstract gives the details of each village by the 8 Livelihood Classes. There are five general population tables of the 'A' Series, three economic tables of the 'B' Series, five household and age (sample) tables of the 'C' Series, seven social and cultural tables of the 'D' Series and one table 'E' giving summary figures for the district and thanas. As far as possible, these tables furnish district data with break-up for Census tracts within the district.

At the 1951 Census, the economic classification was substituted for the classification based on *religion*. The people have been divided into two broad livelihood categories, namely, the agricultural classes and the non-agricultural classes. There are four agricultural classes defined as below :—

I. Cultivators of land wholly or mainly owned and their dependants.
II. Cultivators of land wholly or mainly un-owned and their dependants.
III. Cultivating labours and their dependants.
IV. Non-cultivating owners of land, agricultural rent receivers and their dependants.

There are similarly four non-agricultural classes defined as persons including dependants who derive their principal means of livelihood from—

V. Production other than cultivation.
VI. Commerce.
VII. Transport.
VIII. Other services and miscellaneous sources.

The above eight classes have been referred to as livelihood classes.

Each of the above eight livelihood classes has been divided into three sub-classes with reference to the economic status as below :—

(*i*) Self-supporting Persons ;
(*ii*) Non-earning Dependants ; and
(*iii*) Earning Dependants.

(*i*) A 'Self-supporting Person' is one who earns an income in cash or kind sufficient at least for his own maintenance.
(*ii*) A 'Non-earning Dependant' is a person who has no income of his own either in cash or in kind.
(*iii*) An 'Earning Dependant' is a person who earns a regular (not casual) income not sufficient even for his own maintenance. It includes seasonal income also.

All self-supporting persons are, ordinarily, economically active. But there are certain classes and groups which constitute an exception to this rule. These are mentioned below :—

(*i*) All self-supporting persons of Agricultural Class IV.
(*ii*) The following groups of self-supporting persons who are included in Non-Agricultural Class VIII, and derive their principal means of livelihood from miscellaneaus sources (otherwise than through economic activity) :—
(*a*) Non-working owners of non-agricultural property.
(*b*) Pensioners and remittance holders,
(*c*) Persons living on charity and other persons with unproductive occupations, and
(*d*) Inmates of penal institutions and asylums.

Economically active persons engaged in industries and services are classified in economic table B-III into the ten divisions and 88 subdivisions mentioned above, and are further divided into three sections, namely :—

(*i*) Employers,
(*ii*) Employees, and
(*iii*) Independent Workers.

A person should be treated as an 'Employer' only if he has necessarily to employ any person in order to carry on the business from which he secures his livelihood, provided that employee is regularly employed and derives his Principal Means of Livelihood by such employment. Part-time or casual employment which does not provide the Principal Means of Livelihood of the employee should not be taken into account. A person employing a cook or other servants for domestic services is not an employer.

An 'Employee' is a person who ordinarily works under some other person for a salary or wage in cash or kind, as the means of earning his livelihood. Managers, Superintendents, Agents, etc., and all Government servants should be recorded as employees only even though they may have power of employing or appointing subordinate officers or assistants.

An 'Independent Worker' means a person who is not employed by anyone else and who does not employ anybody else in order to earn his livelihood.

The Age (Sample) tables were prepared from the original enumeration slips by taking a ten per cent. sample in accordance with the following instructions of the Registrar General, India.

The 'D' Series social and cultural tables include Table D-V relating to the displaced persons giving particulars about their arrival into India.

Table D-VI gives details of the non-Indian Nationals and Table D-VII is designed to show the distribution of educated man-power among the different livelihood classes.

Important population *data* for the district and the tahsils have been summarised in Table 'E' which also gives the classification of the people by livelihood classes.

The main Report of the 1951 Census for the States of Assam, Tripura and Manipur will be found in two parts entitled "Census of India, 1951—Volume XII—Assam, Manipur and Tripura". Part I contains and analysis of the statistics collected and Part II statistics arranged in different tables for the States, their natural divisions and districts.

In addition to these Volumes there are National Registers of Citizens prepared for every village and ward and maintained in manuscript giving important census details for each person. These Registers are preserved as permanent records in the district headquarters.

From the *data* collected at the Census of the Small-scale Industries, three tables were prepared which are included in the District Census Handbook, giving village or wardwise distribution of small-scale industrial establishments, employment in textile establishments for Census tracts and employment in non-textile establishments for the same tracts.

While the accuracy in respect of the details actually recorded by the Enumerators during the Census of the Small-scale Industries has been reported to be good, the District Officers were of the view that there was tendency towards under-enumeration of the establishments, due to the failure of the enumerating staff to make *intensive efforts to discover all establishments* within the areas allotted to them. The figures in the tables for the Small-scale Industries should, therefore, be regarded as *illustrative* of the nature of small industries prevalent in the different parts of the district and should not be relied upon as giving *accurate number* of specific type of establishments in different localities.

INSTRUCTIONS FOR TABULATION OF VILLAGE NOTES

Important imformation for every village was separately recorded on printed forms and has been incorporated in columns 3 and 4 of Primary Census Abstract using the symbols given below :—

1. *Floods.—Write* "f" if it is liable to flood of any category.

2. *Epidemics.*—For entries like Cholera, Small-pox, Kala-azar, Malaria, *write* Ch. Sp. Ka or Mal. For all other epidemics mentioned in this column, enter it in full.

3. *Water Supply*—
   A—The village has a source of water supply provided by the Government or Local Board.
   B—Natural sources of supply like rivers and bills.
   C—Private supply.
   D—Accute scarcity.

Underlined, it will indicate that quality of drinking water is bad.

4. *Medical Facilities*—
   a A—The village has a Local Board or Government regular dispensary within 5 miles radius.
   b B—There is no regular dispensary but a Public Health Dispensary within 5 miles radius.
   c C—There is no dispensary but a private qualified doctor within 5 miles radius.
   d D—No medical facilities of any sort.

5. *Educational Facilities*—
   1—Served by a Local Board or Government School within 2 miles radius.
   2—Served by a Private Venture School only within 2 miles radius.
   3—No educational facilities of any kind (Mission Schools have been generally treated as private schools although in some areas where they get grant-in-aid they have been shown as Government Schools by Enumerators).

CENSUS TRACT—SAMPLE POPULATION AND DISPLACED PERSONS

Census statitics of the urban and rural population can be studied in various ways. The results of such studies in comparing the conditions and characteristics of the urban and rural people in the matter of births, deaths, sex composition, sanitation, levels of living, etc., would be of great value in economic planning and development of social welfare work in the State and its different parts.

Each district was, therefore, divided for purposes of the Census into a number of rural and urban tracts according to the size of the population.

Preparatory to the sorting and tabulation of census information, rural and urban areas of a district were grouped into Census Tracts on the basis of instructions issued by the Registrar General of India. With his approval the following rural and urban tracts were formed in the case of the United Khasi and Jaitia Hills.

Tract No.8 Khasi and Jaintia Hills (Rural).

Tract No.2 Shillong Town and Shillong Cantonment.

In several Tables the term "Sample Population" has been used. This sample was drawn according to the following instruction of the Registrar General of India. Enumeration was done on pads of 100 slips each, a slip containing the record of an individual.

"Break each pad and stack the slips of the pad ; and "cut" the stack as in a card game. Place the lower portion above the upper portion and then deal the slips into the pigeon holes. You should deal the slips into pigeon holes *in the order* of 1, 2, 3, 4, 5, S, 6, 7, 8 and 9 successively. All the time, you should watch the slips of 'Displaced Persons'. If you come across any slip of a displaced person deal it in the pigeon hole separately labelled for 'Displaced Persons'. Thus there were three bundles, (*i*) General Slips *i. e.* Slips combined for holes labelled for 1, 2, 3, 4, 5, 6, 7, 8 and 9, (*ii*) Sample Slips *i.e.* Slips in the hole marked 'S' and (*iii*) Displaced person.

Hence it will be seen that the sample is not a sample of the total population but of the latter excluding the 'Displaced Population.'

The check factors for the sample population are—

1,000 S/G Rural Total	=	110·65
1,000 S/G Urban Total	=	111·12
1,000 S/G District Total	=	110·72

A 'Displaced Person' was defined by the Registrar General of India as follows:

"A 'Displaced Person' means any person who has entered India having left or being compelled to leave his or her home in Western Pakistan on or after the 1st March, 1947 or his/her home in Eastern Pakistan on or after the 15th October, 1946 on account of civil disturbances or the fear of such disturbances on account of the setting up of the two Dominions of India and Pakistan ".

As the United Mikir and North Cachar Hills district was formed with a portion of the Jowai Subdivision after the Census date (1st March 1951). the figures of the United Khasi and Jaintia Hills district include the Mikir Hills portion of Jowai Subdivision in all tables except A I, A II, A III, A IV, A V and E. Summary Figures for Districts and Subdivisions.

INDEX OF NON-AGRICULTURAL OCCUPATIONS

(SELF SUPPORTING PERSONS ONLY)

United Khasi and Jaintia Hills

Division	Subdivisions and Groups	Persons	Males	Females
	All Industries and Services	47,400	36,087	11,313
Division 0	Primary Industries not elsewhere specified	7,085	4,672	2,413
	0·1 *Stock Raising*	1,526	1,338	188
	0·11 Herdmen and shepherds	1,069	1,069	...
	0·12 Breeders and keepers of cattle and buffaloes	457	269	188
	0·3 Plantation Industries ... ... Owners, managers and workers in.	5,141	2,959	2,182
	0·31 Tea plantation	30	13	17
	0·30 All other plantations but not including the cultivation of special crops in conjunction with ordinary cultivation of field crop.	5,111	2,946	2,165
	0·4 Forestry and woodcutting	324	284	40
	0·40 Planting, replanting and conservation of forests (including forest officers, rangers and guards).	133	127	6
	0·43 Woodcutters	191	157	34
	0·5 Hunting (including trapping and Game Propagation) ...	73	71	2
	0·6 Fishing	21	20	1
	0·60 Fishing in sea and inland waters including the operation of fish farms and fish hatcheries.	21	20	1
Division 1	Mining and Quarrying	425	294	131
	1·0 Non-metallic mining and quarrying not otherwise classified-including mining and quarrying of such materials as precious and semi-precious stones, asbestos, gypsum, sulphur, asphalt, bitumen.	6	6	...
	1·1 Coal mining.—Mines primarily engaged in the extraction of anthraccite and of soft coals such as bitemeneous, sub-bitumeneous and legnite.	327	205	122
	1·2 Iron ore mining	3	3	...
	1·5 Stone-quarrying, clay and sand pits-Extraction from the earth of stone, clay sand and other materials used in building or manufacture of cement.	89	80	9
Division 2	Processing and Manufacture-Foodstuffs, Textiles, Leather and Products thereof.	2,048	1,481	567
	2·0 Food Industries otherwise unclassified	82	58	24
	2·02 Canning and preservation of fish	4	4	...
	2·03 Slaughter, preparation and preservation of meat ...	1	1	...

Division	Subdivisions and Groups	Persons	Males	Females
	2·00 Other food industries	77	53	24
	2·1 Grains and pulses	4	4	...
	2·11 Hand pounders of rice and other persons engaged in manual dehusking and flour grinding.	4	4	...
	2·2 Vegetable oil and dairy products	419	392	27
	2·21 Vegetable oil pressers and refiners	10	10	...
	2 23 Makers of butter, cheese, ghee and other dairy products.	409	382	27
	2·3 Sugar Industries	1	1	...
	2·30 Other manufactures and refining of raw sugar, syrup and granulated or clarified sugar from sugar beets.	1	1	...
	2·4 Beverages	288	113	175
	2·41 Brewers and distillers	286	111	175
	2·40 Manufacture of aerated and mineral waters and other beverages.	2	2	...
	2·5 Tobacco	1	1	...
	2·50 Manufacture of tobacco products (other than bidis) such as cigarettes, cigars, cheroots and snuff. Stemming, redrying and other operations connected with preparing raw leaf tobacco for manufacturing are also included.	1	1	...
	2·6 Cotton textiles	83	40	43
	2·62 Cotton spinning, sizing and weaving	83	40	43
	2·7 Wearing apparel (except footwear) and made of textile goods.	1,032	737	295
	2·71 Tailors, milliners, dress makers and darners	991	724	267
	2·72 Manufacturers of hosiery, embroiderers, makers of crepe, lace and fringes.	28	...	28
	2.73 Fur dressers and dyers	1	1	...
	2·70 Makers of other made-up textiles goods including umbrellas.	12	12	...
	2·8 Textile Industries otherwise unclassified	3	1	2
	2·83 Silk reeling, spinning and weaving	3	1	2
	2·9 Leather, leather products and footwear	135	134	1
	2·92 Cobblers and all other makers and repairs of boots, shoes, sandals and clogs.	135	134	1
Division 3	Processing and manufacture—Metals, Chemicals and Products thereof.	562	549	13
	3·0 Manufacture of metal products, otherwise unclassified ...	154	150	4
	3·01 Blacksmiths and other workers in iron and makers of implements.	134	130	4
	3·02 Workers in copper, brass and bell metals	2	2	...
	3·03 Workers in other metals	18	18	...

Division	Subdivisions and Groups	Persons	Males	Females
	3·1 Iron and Steel (Basic Manufacture) Manufacture of iron and steel, including all processes such as smelting and refining ; rolling and drawing ; and alloying and the manufacture of castings, forgings and other basic forms of ferrous metals.	157	156	1
	3·2 Non-Ferrous Metals (Basic Manufacture) Smelting and refining, rolling, drawing and alloying and the manufacture of castings, forgings and other basic forms of non-ferrous metals.	1	...	1
	3·3 Transport Equipment	111	110	1
	3·32 Manufacture, assembly and repair of Railway equipment, motor vehicles and bicycles.	111	110	1
	3·4 Electrical machinery, apparatus, appliances and supplies	8	8	...
	3·40 Manufacture of electrical generating, transmission and distribution apparatus ; electrical household appliances other than lights and fans ; electrical equipment for motor vehicles, aircraft and railway locomotives and cars ; communication equipment and related products, including radios, phonographs, electric batteries, X-Ray and therapeutic apparatus ; electronic tubes, etc.	8	8	...
	3·5 Machinery (other than electrical machinery) including Engineering Workshops.	61	55	6
	Engineering workshops engaged in producing machine and equipments parts.			
	3·8 Manufacture of chemical products otherwise unclassified	70	70	...
	3·82 Soaps and other washings and cleaning compounds ...	7	7	...
	3·83 Paints vernishes and lacquers and polishes	22	22	...
	3·86 Candle	41	41	...
Division 4	Processing and Manufacture—Not elsewhere specified ...	2,039	1,932	107
	4·0 Manufacturing Industries otherwise unclassified ...	240	238	2
	4·02 Photographic and optical goods	24	24	...
	4·03 Repair and manufacture of watches and clocks ...	13	13	...
	3·04 Workers in precious stones, precious metals and makers of jewellery and ornaments.	188	188	...
	4·05 Manufacture of musical instruments and appliances ...	12	12	...
	4·06 Stationery articles other than paper and paper products	1	1	...
	4·09 Toy makers	2	...	2
	4·1 Products of petroleum and coal	6	5	1
	4·11 Kerosene and petroleum refineries	6	5	1
	4·3 Cement—Cement pipes and other cement products ...	416	355	61
	Manufacture of cement, cement pipes and cement concrete products.			
	4·4 Non-metallic mineral products	553	553	...
	4·41 Potters and makers of earthen ware	12	12	...

Division	Subdivisions and Groups	Persons	Males	Females
	4·42 Makers of porcelain and crockery	1	1	...
	4·43 Glass bangles glass beads, necklaces, etc.	3	3	...
	4·44 Makers of other glass and crystal ware	16	16	...
	4·40 Makers of other miscellaneous non-metallic mineral products.	521	521	...
	4·5 Rubber products	2	...	2
	4·6 Wood and wood products other than furniture and fixtures.	793	752	41
	4·61 Sawyers	7	7	...
	4·62 Carpenters, terners and joiners	759	736	23
	4·64 Basket makers	18	...	18
	4·60 Other industries of woody materials, including leaves, but not including furniture or fixtures.	9	9	...
	4·9 Printing and Allied Industries	29	29	...
	4·91 Printers, lithographers, engravers	23	23	...
	4·92 Bookbinders and stitchers	6	6	...
