

**SRS BASED
ABRIDGED LIFE TABLES
2015-19**

**OFFICE OF THE REGISTRAR GENERAL &
CENSUS COMMISSIONER, INDIA**

**MINISTRY OF HOME AFFAIRS
GOVERNMENT OF INDIA
NEW DELHI**

PREFACE

The Sample Registration System (SRS) of the Office of Registrar General & Census Commissioner, India brings out Abridged Life Tables annually. The report presents the life tables for India and bigger States/Union Territories. As we all know, a life table summarizes the mortality experience of a population during the period of study. It states the probabilities of death and survival of a hypothetical group or cohort at different ages, which gradually diminishes due to deaths. The life tables brought out under SRS present the scenario of life expectancy at birth and at various quinquennial age groups.

2. Based on the SRS data, this office has been preparing life tables since 1970-75. Although the initial issues of life tables till the period of 1986-90 were brought out at five-year intervals, the subsequent issues have been brought out annually on a five-yearly moving average basis so as to form a continuous series. The present report contains the abridged life tables for the period 2015-19 by sex and residence for India and bigger States/UTs (with population 10 million and above viz. Andhra Pradesh, Assam, Bihar, Chhattisgarh, Delhi, Gujarat, Haryana, Jammu & Kashmir, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu, Telangana, Uttar Pradesh, Uttarakhand and West Bengal) along with Himachal Pradesh. It is presented up to the age group 85+ in order to appropriately reflect the mortality pattern and also to facilitate comparison with life tables being prepared by other countries and the United Nations.

3. This report has been prepared by the officials of the SRS wing of VS Division led by Sh. Arvind Kumar Pandey (Joint Director) and Sh. Shivaji Patil (Joint director) under the guidance of Shri Sanjeev Kumar, Deputy Director General. In particular I wish to place on record the efforts put in by Ms. Jasleen Kaur Rekhi, Senior Research Officer and Sh. Ravi Kant, SI Gr.II in bringing out this publication. I am also thankful for the unending contribution of the Directorate of Census Operations (DCOs) at the States and the officers of the Directorate of Economics & Statistics of the State Govt. of Kerala and Maharashtra in bringing out this document.

New Delhi
June, 2022

(VIVEK JOSHI)
Registrar General & Census Commissioner of India

EXECUTIVE SUMMARY

The present report on '*SRS based Abridged Life Tables 2015-19*' contains the probabilities of death and average longevity at various broad age groups. The life tables are presented for India and bigger States/Union Territories, by sex and residence.

2. The salient features of the report are as summarized below.

- ❖ Expectation of life at birth for India has been estimated at 69.7 years for the period 2015-19, exhibiting an increase of 0.3 years from 2014-18. The life expectancy at birth varies from 65.3 years in Chhattisgarh to 75.9 years in Delhi.
- ❖ The expectation of life at birth is 68.3 years in rural areas and 73.0 years in urban areas for 2015-19. The life expectancy has increased by 0.3 years and 0.4 years respectively for rural and urban areas as compared to 2015-19.
- ❖ At the national level, the life expectancy at birth for males has been estimated at 68.4 years and that for females, at 71.1 years. Expectation of life at birth is highest in Delhi (74.3 years) for males and in Kerala (78.0 years) for females, whereas it is lowest in Chhattisgarh (63.7 years) for males and Uttar Pradesh (66.2 years) for females.
- ❖ For the period 2015-19, the life expectancy at age one year, after surviving through the first year of life, has been 69.9 years and 72.9 years for males and females respectively.
- ❖ The expectation of life at age 60 is 18.3 years for 2015-19, with 17.5 years for males and 19.0 years for females.
- ❖ For 2015-19, Delhi has recorded highest expectation of life for age till 50 years, while Punjab has the highest life expectancy for ages between 70 to 80 years. At the age of 85+ years, Uttarakhand scores the highest life expectancy. The minimum expectancy of life is in Chhattisgarh till age 75 years, beyond which Bihar has the lowest life expectancy.
- ❖ Almost all the States/UTs have recorded a higher life expectancy for females in 2015-19 both across the rural and urban areas, except for Bihar and Jharkhand. On an average, female life expectancy at birth is more than male life expectancy at birth by more than two years. Even at age 70 years, this difference is favorable towards females by about one year.
- ❖ The gap between the rural and urban life expectancy has also narrowed down significantly from 1970-75 to 2015-19. In case of life expectancy at birth, most of the states have reported higher life expectancy in urban areas than in rural areas, except for Kerala. There is a difference of about 4.7 years in urban-rural life expectancy at birth and about 1.6 years in urban-rural life expectancy at age 70, for the country.

ABRIDGED LIFE TABLES 2015-19

Introduction

The life table is a mathematical table which gives the life history of a hypothetical group or cohort as it is gradually diminished by deaths. It gives the probabilities of death and survival at various age groups. A life table summarizes the mortality experience of a population during the period of study and provides concise measures of the longevity of that population. In the words of William Farr, life table is the 'Biometer' of the population. The data for construction of life tables considers both deaths and the population exposed to risk of death classified by age.

2. In India, life expectancy at various broad age groups has been estimated through Sample Registration System (SRS) since 1970-75. The Sample Registration System (SRS) is a large-scale demographic sample survey based on the mechanism of a dual record system with the objective of providing reliable estimates of fertility and mortality indicators at State and National levels for rural and urban areas separately. The estimated age-specific death rates derived from the SRS provide the necessary database for undertaking construction of abridged life tables. To adjust for the sampling fluctuation and for augmenting the sample size, five-year average is compiled for estimating age-specific death rates separately for rural and urban areas, both for male and female.

3. The present report covers the life tables for the period 2015-19. The life table has been constructed for all India and bigger States/Union Territories (having population 10 million and more) along with Himachal Pradesh. The life table estimates of 'Jammu & Kashmir' represent the erstwhile state of Jammu & Kashmir, as was during the reference period from 2015 to 2019 of the present report; and therefore includes the present-day Union Territories of Jammu & Kashmir and Ladakh. For the case where, for a given age-group and sex, no deaths were reported in the sample of 2015-19, the mortality rate has been imputed on the basis of a geographic approach, to generate the life tables. Hence, for females in the rural region of NCT of Delhi and for males in the urban region of Kerala, the mortality rate in the age-group of 5-9 years for females in the total region of NCT of Delhi and males in the total region of Kerala has been used as the imputed mortality rate respectively. However, life table has not been generated in case of females aged 15-19 years in urban regions of Himachal Pradesh and males aged 10-14 years in rural region of NCT of Delhi, as no sample deaths were recorded during the period 2015-19 and geographic imputation was not feasible.

4. The life expectancy at birth for the country has undergone a significant change from 49.7 in 1970-75 to 69.7 in 2015-19, registering an increase of 20 years in the last four decades, as depicted in Chart-1 below. It is worthy to mention that in 1970-75, the life expectancy at birth for male (50.5) was more than female (49.0). But the trend has been reversed since 1981-85. In 2015-19, the female life expectancy (71.1) is higher than that of male (68.4) by more than two years.

5. The gap between the rural and urban life expectancy has also narrowed down significantly during the same period (Chart-2). There are notable variations at the State level with Kerala in 1970-75 recording the highest life expectancy at birth of 62.0 years and Uttar Pradesh, the lowest, 43.0 years. In 2015-19, the highest life expectancy at birth has been estimated for NCT of Delhi with 75.9 years, while Chhattisgarh with 65.3 years, has the lowest life expectancy at birth. The Report gives scenario of life expectancy at various quinquennial age groups also.

6. There are several methods for construction of life tables. In this report, the life tables have been generated using mortality package for life table estimation (MORTPAK 4), which is a United Nation's software package for mortality measurements. The various columns given in the abridged life table are ${}_nq_x$, l_x , ${}_nL_x$ and e_x .

${}_nq_x$	It represents the probability of dying between exact age x and x+n
l_x	It is the expected number of persons surviving at exact age x out of the original cohort l_0 of say 1,00,000 persons
${}_nL_x$	This denotes the expected number of person-years lived between ages x and x+n years
e_x	It denotes the expectation of life at age x viz. the average number of additional years a person would live if the current mortality trends were to continue.

Life Expectancy at Birth for India, 1970-75 to 2015-19

7. The life expectancy at birth usually denoted by e_0^0 , measures the average number of years a person is expected to live under prevailing mortality conditions. Statement 1 shows the values of the expectancy of life at birth for India by sex and residence for the periods 1970-75 to 2015-19. The life expectancy at birth in 2015-19 has been 68.4 and 71.1 years for males and females respectively. The increase in life expectancy has been 0.2 years for males and 0.4 years for females over 2015-19 from 2014-18. The life expectancy has increased by 0.3 years and 0.4 years respectively for rural and urban areas as compared to 2014-18.

* : India includes all States/UTs

: India does not include Jammu & Kashmir

Note: The Statement-1, separately for the bigger States/UTs, is given at Appendix of the report.

8. The Chart 3 given below presents the expectancy of life at birth between 1970-75 to 2015-19 periods separately for males and females, by residence.

Chart 3: Expectation of life at birth by sex and residence, India, 1970-75 to 2015-19

Expectation of life at age 1 for India, 1970-75 to 2015-19

9. The values of expectancy of life at age 1 (e_1^0) by sex and residence at the national level are given in Statement 2. For the period 2015-19, the life expectancy after surviving through the first year of life has been 69.9 and 72.9 years for males and females respectively. Comparison of figures in Statement 2 with that in Statement 1 shows that the average expected life span improves after surviving through the first year of life for both males and females. This holds good for both the rural and urban areas. The expectancy of life at age one in rural areas for females has surpassed that of males from 1987-91. Since 1987-91, the gap between the life expectancy of male and female in rural areas has been growing in favour of females from 0.2 years in 1987-91 to 3 years in 2015-19. In urban areas, the gap in the life expectancy of male and female has increased from 0.4 years in 1970-75 to 2.7 years in 2015-19.

* : India includes all States/UTs

: India does not include Jammu & Kashmir

Expectation of Life at Birth, State-wise

10. Statement 3 below gives the estimates of life expectancy at birth by sex and residence in bigger States/UTs in the period 2015-19. The life expectancy at birth, at the national level, has been estimated at 69.7 years for 2015-19; and it varies from 65.3 in Chhattisgarh to 75.9 in NCT of Delhi.

11. Almost all the States have recorded a higher life expectancy at birth for females in 2015-19 both across the rural and urban areas, except for Bihar and Jharkhand. Kerala has recorded the highest life expectancy at birth for males and females in rural areas; whereas Jammu & Kashmir has recorded the highest for males in urban areas and Himachal Pradesh has recorded the highest life expectancy for females in urban areas. The lowest life expectancy at birth has been recorded in the State of Chhattisgarh for rural males and Uttar Pradesh for rural females. In Urban, the lowest life expectancy at birth has been recorded in Chhattisgarh & Uttar Pradesh for males and females respectively during 2015-19.

Statement 3

Expectation of life at birth by sex and residence, India and bigger States, 2015-19

India & bigger States	Total			Rural			Urban

Chart 4: Expectation of Life at Birth, India and bigger States/UTs, 2015-19

12. Statement 4 shows the per annum average increase in the life expectancy at birth by sex in the period from 1970-75 to 2015-19 for India and bigger States/UTs. It is observed that by 2015-19 females have recorded higher increase in their life expectancy as compared to that of males. Per annum average increase in life expectancy for females is higher in comparison to that for males in all the bigger States/UTs and India. The maximum per annum average increase in life expectancy for males during the period 1970-2019 has been observed in Odisha and the minimum in Haryana. For females, the maximum annual increase has been recorded in Himachal Pradesh and the minimum in Kerala.

*: India includes all States/UTs

Life Expectancy at selected ages

13. The estimates of the expectancy of life at selected ages during 2015-19 for India and bigger States/UTs are given in Statement 5. The estimate at birth varies from 65.3 years in Chhattisgarh to 75.9 years in NCT of Delhi during 2015-19. In all States/UTs, age-specific death rate for the children of age less than one year is more than all other quinquennial age groups except higher ages. Therefore, expectancy of life at age one is higher than that at birth in all States/UTs but for Kerala where it is lower by 0.3 years. After this, life expectancy declines at all subsequent ages in all the States/UTs. NCT of Delhi has recorded highest expectation of life for age till 50 years, while Punjab has the highest life expectancy for ages between 70 to 80 years. At the age of 85+ years, Uttarakhand scores the highest life expectancy. The minimum expectancy of life is in Chhattisgarh till age 75 years, beyond which Bihar has the lowest life expectancy.

* : India includes all States/UTs

16. The expectancy of life at different ages by sex at the national level during 2015-19 is presented in Chart 5 below. The graph clearly indicates that the expectancy of life for females is higher than males at all the selected ages in the period 2015-19.

Life Expectancy at selected ages, State-wise

17. The expectancy of life at birth, infancy, childhood and age 60 years has been graphically presented in Charts 6 to 9 by sex for India and bigger States/UTs. These charts have been depicted in descending order of female expectancy of life. Chart 6 presents State level expectancy of life at birth for males and females during 2015-19. The female life expectancy at birth is higher than males in all the bigger States/UTs except Bihar and Jharkhand. The female life expectancy at birth is highest in the State of Kerala followed by NCT of Delhi and Himachal Pradesh, whereas it is the lowest for Uttar Pradesh preceded by Chhattisgarh and Assam in that order.

Note: Data arranged in descending order of female life expectancy.

18. The following Chart 7 gives graphical presentation of expectancy of life at infancy (age 1) during 2015-19 for India and bigger States/UTs separately for males and females. In general, the expectancy of life at age 1 is higher than that at birth. The expectancy of life for females after attaining the age of 1 is higher than that of males in all the bigger States/UTs except Bihar and Jharkhand. The female life expectancy at infancy is the highest in Himachal Pradesh followed by Kerala and Delhi, whereas it is the lowest for Chhattisgarh preceded by Uttar Pradesh, Jharkhand and Assam in that order.

Note: Data arranged in descending order of female life expectancy.

19. The State-wise expectancy of life at childhood (age 5) separately for males and females is presented in the following Chart 8. The female expectancy of life at childhood is higher than males for all bigger States/UTs except Bihar and Jharkhand. The female life expectancy at childhood is highest in Himachal Pradesh followed by Delhi, Kerala and Jammu & Kashmir, whereas it is lowest for Chhattisgarh preceded by Uttar Pradesh and Jharkhand in that order.

Note: Data arranged in descending order of female life expectancy.

20. Chart 9 given below gives graphical presentation of expectancy of life at age 60 years during 2015-19 for India and bigger States/UTs separately for males and females. The female expectancy of life at age 60 is also higher than that of males in all the bigger States/UTs except for Bihar and Jharkhand. The female life expectancy at age 60 is highest in the State of Jammu & Kashmir followed by Himachal Pradesh and NCT of Delhi, whereas it is lowest for Bihar preceded by Chhattisgarh and Jharkhand in that order. The inter-se position of States/UTs in terms of expectancy of life at age 60 differs slightly than that at younger ages. At age 60, Himachal Pradesh and Jammu & Kashmir exceed Kerala, which occupies the first position in ranking the expectancy of life at birth. Even at age 60, the expectancy of life differs significantly by sex and from State to State.

Note: Data arranged in descending order of female life expectancy.

Male-Female Differential, State-wise

21. The State-wise variation in difference between female to male estimated life expectancy at birth and at age 70 during 2015-19 are presented in Chart 10 and 11 respectively. In both the cases, all the states/UTs have reported favorable difference of female over male life expectancy, except for the states of Bihar and Jharkhand. There is a difference of about 2.6 years in female-male life expectancy at birth at the national level, with the highest difference been recorded at about 7.2 years for Himachal Pradesh. In case of life expectancy at age 70, this difference at the national level is about one year, with Himachal Pradesh registering the highest difference of 3.9 years amongst the bigger States/UTs.

Chart 10 : Difference in female to male expectancy of life at birth, State-wise, 2015-19

Chart 11 : Difference in female to male expectancy of life at age 70+, State-wise, 2015-19

Rural-Urban Differential, State-wise

22. The State-wise variation in difference between urban to rural estimated life expectancy at birth and at age 70 during 2015-19 are presented in Chart 12 and 13 respectively. In case of birth (age-0), life expectancy is higher in urban areas than in rural areas for most of the States/UTs; except for Kerala which has reported higher rural life expectancy at birth. On the other hand, in case of age 70 years, Kerala, Uttarakhand, Telangana, Odisha and Gujarat have reported higher rural life expectancy while remaining States/UTs have reported higher urban life expectancy. The highest urban-rural difference amongst the bigger States/UTs has been recorded for Assam at about 7.9 years and Rajasthan at about 3 years in case of life expectancy at birth and at age 70 years respectively.
