VELANKANNI

Velankanni is one of the most visited pilgrim centers in India. It is a town situated on the shores of Bay of Bengal. The renowned shrine 'Basilica of Our Lady of Health' draws pilgrims from all over the world. Not only Christians but also the people of other faiths come to this Church to pray at the shrine of " Our Lady of Health".

Knowing the importance of this town the Pope in the Vatican city has declared Velankanni as a " Holy City". This Roman Catholic Church has an extended Basilica which has two floors, where one can find the statue of Jesus Christ. The Gothic style of architecture is a unique feature of the Church. The Church itself is an imposing building with inspiring architecture. While the building have been painted white the roof of the Church is made by tiles with striking red in contrast to the colour of the walls. The environment around the Shrine is spick and span, radiating rays of hope and piety.

Foreword

The District Census Handbook (DCHB) published by Census Organisation since 1951 census, is one of the important publications in the context of planning and development at gross-root level. The publication, which is brought out for each district, contains several demographic and socio-economic characteristics village-wise and town-wise of the district alongwith the status of availability of civic amenities, infrastructural facilities, etc.

The scope of the DCHB was initially confined to a few Census Tables and Primary Census Abstract (PCA) of each village and town within the district. Thereafter, at successive censuses, its scope and coverage has been enlarged. The DCHB published at the 1961 census provided a descriptive account of the district, administrative statistics, census tables and a village and town directory including PCA. The 1971 census-DCHB series was in three parts: Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. The 1981 census DCHB was in two parts: Part-A contained village and town directory and Part-B the PCA of village and town including the SCs and STs PCA up to tahsil/ town levels. New features alongwith restructuring of the formats of village and town directory were added into it. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent village, the distance in broad ranges from the nearest place having such an amenity, was given. Information on new items such as adult literacy centres, primary health sub-centres and community health workers in the village were provided so as to meet the requirements of some of the Revised Minimum Needs Programme. Information on approach to the village was provided for the first time in the Village Directory so as to give the details on number of inaccessible villages in each district. In the Town Directory, a statement (IV-A) on slums was introduced to provide the details on civic and other amenities in the notified slums of Class I and Class II towns.

The 1991 census DCHB, by and large, followed the pattern of presentation of 1981 census, except the format of PCA was restructured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 census. In addition, sex-wise population in 0-6 age group was included in the PCA for the first time with a view to enable the data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 census. One of the important innovations in the 1991 census was the Community Development Block (CD block) level presentation of village directory and PCA data instead of the traditional tahsil/taluk/PS level presentation. It was expected that the presentation of village directory and PCA data at CD block level will help the planners in formulation of micro level development plans, CD block being lowest administrative unit.

The present series of 2001 census DCHBs have been made more informative and exhaustive in terms of coverage and content. The Village Directory has been enlarged in scope by including a number of other facilities like banking, recreational and cultural facilities, newspapers and magazines and 'most important commodity' manufactured in village. Income and expenditure of gram panchayat, wherever possible, has been provided. Apart from these, more details on distance(s) at which basic amenities are available (if not available in the village), are given. This includes educational facilities (namely primary and middle schools and college), medical facilities (viz. Allopathic Hospital, Maternity & Child Welfare Centre and Primary Health Centre), drinking water, post & telegraph (post office and phone), communication, bank, credit societies and recreational facilities. In Town Directory, the statement on Slums has been modified and its coverage enlarged by including details on all slums instead of 'notified slums'. The information is given in case of all statutory towns irrespective

of their class, against only Class I and Class II towns in the 1981 and 1991 censuses. The basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. Two other significant additions in the publication are inclusion of 'motif' highlighting significant characteristic of the district and analytical notes as annexures. The analytical notes on (i) fertility and mortality and (ii) various measures of fertility and mean age at marriage are prepared based on 1991 Census. Whereas, in the notes relating to (i) percentage distribution of migrants by place of birth/place of last residence, (ii) main religions, (iii) marital status of population, (iv) age, sex and education and (v) distribution of spectrum of mother tongue, nature and extent of changes occurred in the district in its basic socio-demographic features during the decade 1991-2001 are analysed. The eight digits permanent location code number (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

The village and town level amenity data have been collected, compiled and computerised in prescribed record structure under the supervision of Shri. C. Chandramouli, Director of Census Operations, Tamil Nadu. Thereafter, efforts have been made to ensure comparability of the information with that of 1991 census data and the information brought out by the respective state governments in their annual reports and statistical handbooks for various years after 1991. The task of planning, designing and coordination of this publication was carried out by Shri R.G. Mitra, Deputy Registrar General (C&T) and Dr. I.C. Agrawal, Assistant Registrar General of Social Studies Division. Dr. R.P.Singh, Deputy Registrar General (Map) provided the technical guidance in the preparation of maps. Whereas, Shri Anil Kumar Arora, Deputy Director of Data Processing Division who worked under the overall supervision of Shri Himakar, Addl. Director (EDP) helped in preparation of record structure for computerisation of village and town directory data and the programme for the generation of Village Directory and Town Directory statements including analytical inset tables. The draft DCHB manuscripts received from the Census Directorates have been scrutinised in the Social Studies Division under the guidance of Shri S.L. Jain, Deputy Director and Shri R.K. Mehta, Assistant Director. I am thankful to all of them and others who have contributed to make this publication possible.

Preface

Publication of the District Census Handbooks (DCHBs) was initiated after the 1951 census and is continuing since then with innovations/modifications after each decennial census. This is the most valuable district level publication brought out by the census organization on behalf of each State Government/Union Territory administration. It *inter-alia* provides data/information on some of the basic demographic and socio-economic characteristics and on the availability of certain important civic amenities/facilities in each village and town of the respective districts.

The District Census Handbook has two segments: Part A and Part B. Part A primarily deals with village and Town Directory and Part B contains Primary Census Abstract of each village and town of the District. The 1991 Census data presentation both in Part A and Part B of this book was the transition from traditional presentation at Taluk level to CD Block level and this pattern continued in 2001 census as well.

For the first time in 2001 census, the District Census Handbooks are being made available in electronic format.

The District Census Handbook is the joint collaboration of the Census Directorate and the Government of Tamil Nadu. On behalf of the Government of Tamil Nadu, this Directorate has prepared the manuscript of this book.

The District Census Handbooks of 2001 have some additional information which is based on the 2001 census as compared to the previous censuses like capturing of information on participation of women in economic activities, netting all the children in age-group 0-14 as also elderly people of age 60 years and above. The data about the number of handicapped persons including partial disability has also been collected in 2001 census for the whole of India. The most important methodological innovation introduced in 2001 census relate to carving out separate slum enumeration blocks.

The data being presented in this publication have been collected and compiled by Shri M.R.V. Krishna Rao, Deputy Director of Census Operations, Tamil Nadu with the assistance of Shri S.K. Srivastav, N. Sukumar Nandagopal and A. Achchhu Ali, Assistant Directors. For the preparation of manuscript of this book, I received wholehearted co-operation from all the Heads of Departments, Heads of offices of the District / Taluk / Corporation / Municipal / Town and Rural Administration and a number of dedicated and experienced Census staff of this office. I am grateful to all of them for their valuable contribution in the accomplishment of this task of national importance. I must place on record the co-operation extended to me by the press media and electronic media to make the census taking a great success in the state.

I am deeply grateful to Shri J.K. Banthia, IAS the Registrar General and Census Commissioner, India, New Delhi for the valuable guidance and advice at every step till the finalisation of this handbook. I also express my thanks to Dr I.C. Agrawal, Assistant Registrar General (Social Studies Division) and Shri S.L. Jain, Deputy Director, ORGI, New Delhi for preparing the set of instructions for the compilation of the village and Town Directory and other inset tables etc. being inserted in this District Census Handbook.

In particular, it has to be mentioned that the write up portion was taken up by Shri M.R.V.Krishna Rao, Deputy Director and finalised by Dr. D. Venkatesan, Deputy Director with the assistance of other members of the staff whose names have been mentioned in the “Acknowledgements”.

ANALYTICAL NOTE

Analytical note

i) History and Scope of the District Census Handbook

The compilation of District Census Handbook is an innovation of the 1951 Census. District is considered as the most important unit for presentation of Census data. Census Statistics are also compiled for individual villages and towns, as they constitute the basic units of human habitation. Besides this, some other useful information pertaining to the land and the people has also been included in it to make it a self-contained book of reference for the District. It was, however, not altogether a new idea, since census data for smaller units were published in earlier censuses also in one form or the other. For the first time in 1891 District wise list of villages were published giving the population of each village. At the 1911 Census, data of villages were published in the form of village directory. Such village directories were again compiled in the shape of District Census Statistics at the 1921 Census. Finally, District Census Handbooks emerged as regular decennial publication since 1951 Census. The demand for the basic data for the smallest administrative unit was greatly felt in the post-independence era. The ushering in an era of planning and development in the wake of launching of Five year plans after attaining independence, urgent need for detailed data at village level was felt. Thus, when the proposal to bring out District Census Handbook was put before the State Government, they readily agreed for the compilation and printing of District Census Handbooks through their respective Directors of Census Operations, under the authority of local government concerned. The general appreciation and utility of this handbook encouraged the Census Organisation to increase the scope of publication.

The tradition thus built up has been continued in the present series of District Census Handbooks. In the 1971 Census, it had been decided to bring out these hand books in three parts viz; Parts A, B and C. In respect of Tamil Nadu, Parts A and B of this publication had been printed in one volume and part C as a separate volume. During 1981 Census, it had been decided to print it in two parts viz. Parts A and B separately. Part A of this handbook consists of village and Town Directory and part B gives data on Primary Census Abstract (PCA). In 1991 Census also, the same pattern was adopted publishing Parts A and B in a single /double volumes as per the requirement and determining the size of the publication. However, in this census some of the non-census data included are information on girl schools, social forestry areas etc. whereas items like staple food and information on newspapers etc. have been omitted.

In the present Census, this District Census Handbook is being brought out in one volume which contain the village and town directory as also the Primary Census Abstract and it should certainly quench the thirst of the planners involved in micro level planning. Similarly, additional data revealing civic and other amenities in class I town has been presented especially in respect of slum dewellers. Scholars and planners alike may benefit from the data on amenities.

(ii) Brief History of the District

Nagapattinam District was formed on 18th October, 1991 by bifurcating Thanjavur district. Though the nomenculture is new, it has been traditionally referred to as East-Thanjavur. The District with its headquarters at Nagapattinam was originally named after a Muslim leader Thiru. Quaid-e-Milleth. Subsequently, as per G.O.Ms.No.681, Revenue Department, dated 25.07.1996.

Nagapattinam district stands unique from time immemorial for its agricultural activities and is rightly acclaimed as the Granary of the South India lying in the deltaic region of the famous river Cauvery and criss-crossed by lengthy network of irrigation canals and rivers. This coastal district abounds in green paddy fields, tall coconut groves, vast garden of mango and

other verdant vegetation. The river Cauvery is considered as a holy river like Ganges in North India. There are certain legendary and mythological stories attributed to its divine origin and it is pointed out by the people as "Mother Cauvery" since it makes the lands fertile with its tributaries.

This district has also have a tribute that the mother Cauvery after her long journey confluence with sea at Poombuhar in this district which was once the capital city of the Chola Dynasity.

It is no wonder, therefore, that at the very threshold of the district itself one can feel the distinguishing green vegetation and call Nagapattinam as the green mansion of the south with an average annual paddy yield of 5.52 lakh metric tones, during 1998-99. So, the economy of the district is therefore primarily agrarian in nature with few industrial units.

This district is predominantly a coastal district having a long coastal line of 147 kms. It is also conspicious among all the thirteen coastal districts of Tamil Nadu.

Marine fish production accounts for about 20 percent of the total marine fish catch of the state. This district stands second in the state next to Ramanathapuram district in marine fish production. Fishing is the second main economic activity in this district.

According to the known earlier history this district was ruled over by Cholas, Pandyas and Cheras kings.

In Literature, Karikala and Koccengan were the most prominent kings in the district. Karikalan renoveted and built the port of Poombuhar and patronized liberal arts and culture.

Of the Chola kings, Koccengan was more brilliant and illustrious both in war and peace. He showed equal zeal for both Saivisam and Vaishnavisam, built enormous Saivite Temples including the famous "Sikkal Singaravelan Temple" at Sikkal.

After a brief set back in the Chola regime between the third to ninth century AD the Cholas became the mighty rulers. With the rise of Rajaraja-I(985-1014) the days dawned to bring about new and brilliant chapter in the history of Cholas. Rajendra-I was succeeded by four rulers Rajadhiraja, Rajendra-II, Virarajendra and Adirajendra's regime was brief and it became weak in his time and later the kingdom passed to the Eastern Chalukyan. By the beginning of the 13th century, the Chola dynasty became extinct and gave way to Pandiyan supermacy.

The period of Chola kings was not only considered as epoch making but also an era of cultural renaissance. The inhabitants have successfully concentrated their Histrionic talents in the field of art, literature, drama, music and dancing and are known for their rich cultural and religious favor.

After a short period of Pandiyan regime, Muslim ruler Aleud-Din Khiliji over powered the Pandiyas and continued until the middle of 14th century. After then, the Nayak dynasty was established during 15th century. The beginning of 17th century saw the end of Vijayanagar empire.

After that Marattas came to rule in the later of half of 17th century. The Marattas ruled for some time but became later vassals of the Mughal Governor of Karnataga. Subsequently, there were hostilities between the Arcot Nawab and the Maratta rulers of Thanjavur. The supermacy of the English later established.

Nagapattinam was one of the oldest port city in the State. In literature it was called as Navai pattinam(City of Ships) i.e., Nagapattinam. The ships from Burmah, Sri Lanka and Singapore used to land at Nagapattinam port. The Portugese traders who identified this port had their trade between 1612 to 1660 A.D. After that, the Dutch traders and then the East India Company followed Nagapattinam as a valuable marketing centre until 1845A.D.

This district historically has rich culture, heritage and civilization of Chola, Chera, Pandiyas, Marattas, Portuagease, Dutch and British etc.

This district is noted for its secular nature. People from all three major religions namely Hindu, Muslim and Christians are living together in a harmonious manner. They celebrate their fairs and festivals with a sense of mutual respect. The famous 'Darga' at Nagore and the Roman Catholic Church of "Our Lady of Health" at Velankanni are said to confer blessings on all, irrespective of caste or creed and are holding a great veneration by the people of all faiths alike.On festive occasion, the Hindu devotees out number all

other participants in the shrine belonging to other religions.Similarly, in the case of some Hindu festivals, the temples are thronged by a substantial number of person belonging to other religious group as well,who have stauch faith and come in full reqevence to pay homage to the presiding deities. There are a number of famous temples in this district namely Sikkal Singaravelan, Thirukadaiyur, Vaitheeswaran Koil etc.

(iii) Administrative set up

Nagapattinam districtis extends to 2140 sq.kms. This district with 2.09 percent of the total State area accommodate 2.47 percent of total state population. The density of population in the district was 616 persons per sq.km. as compared to 480 persons of the State. Nearly 78% of the population lives in villages and 22% of the population lives in urban areas. The district headquarters is Nagapattinam. This district is having 11 Panchyat Unions, 3 Municipalities, 9 Town Panchayats and 434 Village Panchayats.

(iv) Physical Features

Location and size

Nagapattinam district is a peninsular delta district surrounded by Bay of Bengal on the East, Palk Strait on the South and land on the West and the Northern side. The district is located at $10^0.10'$ to $11^0.50'$ North latitude and $79^0.50'$ East longitude. It has a coastal line of about 147 kms, divided into two sections – one extending from the mouth of river Coleroon to Point Calimere and the other from Point Calimere to bordering the Palk Strait. The famous Point Calimere is located in this district. The French Pocket, Karaikkal now a portion of the Union Territory of Pondicherry is situated in the middle of the coastal area between the Coleroon and Point Calimere. The coastal line has a number of harbours of which mention may be made on Nagore, Point Calimere, Nagapattinam, Tharangampadi and Thirukadaiyur.

The district can be divided into three distinct Natural Division namely (i) the deltaic region, (ii) the upland area or non-deltaic region and (iii) the Salt swamp. The deltaic region carries the whole northern

and western portion of the district where the Cauvery with its wide network of branches irrigate more than half of the district, Vedaranyam Salt swamp forms the third great natural division of this district. It runs along the coast from Point Calimere for about 48 kms. This is a longest swamp of its kind in the state. It is filled by two periodical high tides during the fullmoon day of months of May and June and retains sea water to a depth of two meter over a considerable area enclosed below earthen banks, which when closed the water from flowing back into the sea after the tide recedes. It is in this manner the well known Vedaranyam spantaneous salt is produced.

Physiography

Rivers

There is no hill or hillock existing in Nagapattinam district.

The river Cauvery and its tributaries are the primary and very dependable source of irrigation. Paddy cultivation of this district is fully depending upon the release of water from the Mettur reservoir. The present irrigation system in place is followed since Chola period. It is one of the best irrigation system in the state. The irrigation need of this district is met by Cauvery system in northern parts of the district and by the Vennar system in southern parts of the district. The water in these rivers is regulated at Kallanai (Grand Anaicut) which was originally built by Karikal Chola. Full supply of water in the river and channels from the middle of June and the end of September are fairly required for timely sowing and transplanting of paddy crops in the delta. Supply will be reduced by the beginning of the October and still further reduced from the middle of the October provided North East Monsoon sets in time.

The names of the some main tributaries of Cauvery running in this district are:

1. Coleroon
2. Mulliyaru
3. Addapparu
4. Ilarichandra River
5. Odampokki
6. Valapparu
7. Mudikondan
8. Thirumalai Rajan
9. Nandalar
10. Veeracholanaru
11. Manjalaru
12. Ayyanaru
13. Vikkaramanaru

Climate

The climate of the District is fairly healthy, though hot and relaxing. The district has recorded maximum and minimum temperature were 34.3^0 and 22.8^0 Celsius respectively. November, January and February are the pleasant months in a year with climate full of warm days and cool nights. From March onwards, the climate becomes sultry and the summer shoots and reaches its peak by the end of the May and June depending upon the set of summer rains. The north-east monsoon which sets in middle of October brings complete relief. Rain in these months is beneficial for the Paddy crops. The south-west monsoon sets in June and continues until September. The rainfall during this period is much lower than that of north-east monsoon.

A comprehensive statement showing the monthwise rainfall in millimetres in various monsoon seasons in Nagapattinam district during 1998-99 is furnished below:

Name of Season	Month and Year	Normal Rainfall	Actual Rainfall

As the district is having vast coast line and having a large number of rivers, it is frequently affectd by floods. Cyclones are also experienced in the district. In 1993, Cyclone had hit the Nagapattinam coast.

In 1999-2000, Nagapattinam District received 1431 mm of rainfall as compared to a normal of 1378.6 mm. The table below gives the average actual and normal rainfall in the District during the South West, North East monsoon, winter and hot weather season in 1999-2000 (in mm).

Forestry

The forest division comprises natural forests in scattered patches, some of which are of special ecological value as these form the compact plantations raised on the banks of rivers and canals etc. over the entire district. The plantation raised in reserved forests as avenue teaks have been handed over to P.W.D. and compact teak plantations have been retained by Forest Department. The area under reserved forest in this district is 463 hectares or 1.7 % of the geographical area. The forest area is mangrove type and can be further classified in to

1. Littoral forest,
2. Tidal Swamp forest,
3. Southern tropical thorn forest,
4. Southern Carmatic Umbrella thorn forest and
5. Tropical dry ever green forest.

Littoral and tidal swamp forests comprise 70% of the total forest area in this district. The trees most commonly found in this forest are teak, teak-sisoo, sisoobebal, teak acacia, bamboo, coconut etc.

The production and revenue earned from forest during 1998 are detailed below:

Sl.No.	Type	Quantity(Cu.m)	Value in '000' Rs.
1	Timber	799.555M	4840
2	Teak(Poles)	2179(in Nos.)	6623
3	Sissoo	193.532M	3871
4	Fuel Wood	0.750	N.A.

Fauna and Flora

There is a wild life sanctuary where large number of migratory birds visits regularly. It is known for its black bucks.

Minerals and Mining

The major portion of Nagapattinam district is covered by Cauvery Alluviam and reported to have potential for mineral wealth. Lignite belts have been encountered is between 230 and 270 metres depth during the course of drilling by Oil and Natural Gas Commission in Thirumangalam area near Mayiladuthurai. The fixed carbon content ranges 26.10 to 37.50 percent, which is higher than the lignite of Neyveli. Similar occurrences have also been reported from Varadhirajapuram, Sittarkadu and Pandanellur area.

Ilmenite-garnet sands were located in Thirumullaivasal and at the mouth of Coleroon river. In Tharangampadi, probable reserves of ilmenite and garnet sand are estimated at 90,400 and 4900 tonnes respectively. An occurrence of ilmenite rich in beach sands is reported east of Kodiyampalayam and it extends over a distance of 2 kms. with an average of 50 meters.

Large deposits of crude oil and gas has been found in the district. Oil and Natural Gas Commission (ONGC) is avtively involved in exploration of hydrocarbons in this district. At Narimanam village of Thirumarugal Block near Nagapattinam the Madras Refineries Limited have installed Cauvery Basin Refinery with capacity of 0.5 million tonnes per annum with LPG separation facilities. Presently the work on its expansion to 1.10 tonnes per annum is under progress. With increasing availability of oil and gas in the regions, Cauvery Basin refinery of MRL grow in size and assume the role of mother industry, giving scope for the development of a port of petrochemical industries in this district as well as a large number of gas based industries. Total number of mining and

quarrying in the district was16. Sand, Silica sand, Lime shell, Earth and Sandy soil, Crude oil and Natural Gas were the main minerals of the district. The production of these minerals during the year 1998-99 was:

Sl.No.	Minerals	Production (in Tonnes)
1	Sand	2,990
2	Slice Sand	17,590
3	Lime Shell	80
4	Earth and Sandy Soil	6,383
5	Crude oil	187,093.2
6	Natural Gas(Cu.M)	14,201,060

Soil

The soil of the district can be classified into three categories – the alluvial, regar and anenaceous. The soil of the delta region is entirely alluvial but varies greatly in quality. The best of the alluvial is found in the western part of the district and the quality decreases generally as we move towards cast. The quality of land is poor in Nagapattinam, Kilvelur and Vedaranyam Taluks, especially in coastal areas. The soil there is saline and avenaceous and the drainage system is poor.

The following Table gives the area under Crops and their production during 1998-99.

Land and Land Use Pattern

The total geographical area of the district during the year 1998-99 was 2,71,583 hectares. The following statement shows the break up of the total geographical area by land and their percentage for Nagapattinam district.

Land and land use	Area in Hectares	%
1. Forest	2,857	1.3
2. Total Irrigation	119,462	54.0
3. Un Irrigated	33,051	14.9

Rural Total	221,179	100.0
Urban Total	18,575	7.8
District Total	239,754	100.0

Source: Village Records

It is noted that 55.1% of the area falls under the new area sown against the corresponding percentage of the state stands 43.4% only. It is also obvious that land under forests is much below the state average but this ecological imbalance has to some extent set aside by the land under'Miscellaneous tree crops and groves' of 3.8% which is above the state percentage of 1.8%.

Land Holdings

Most of the lands were under the control of big landlords in the Pre-Independence days. After independence introduction of Land Ceiling Act and other Acts protecting the interest of tenants, the size of holdings have been minmimised. More than 80 percent of lands were with small farmers and the average size of the land holding was 0.85 hect. According to Agricultural Census 1995-96 of Nagapattinam district, the size and land holdings of the disrict is detailed below

Sl.No.	Sizeof Holdings(Hect.)	Total No.of Holdings	Extent in Hect.

This district is known for Paddy cultivation with its natural resources like rainfall, climate, texture and fertility of soil. The majority of the farmers happen to be small and marginal. The district is also known for vast labour population which entirely depends on agriculture.

Agriculture

Nagapattinam district has occupied an important place in agriculture sector due to its alluvial soil blessed by 'Mother Cauvery' and for numerous branches which serve as main source of irrigation. Agriculture forms the mainstay of 70% of the population in the district. Of the total geographical area, during 1998-99, net area sown is 1,49,706 hectares, area sown more than once was 1,02,756 hectares, Gross cropped area is 2,52,462 hectares. The total arca both under food and non-foodcrops covers 2,34,424 hectares and 10,868 hectares respectively.

The main occupation in this district is paddy cultivation. Besides Sugarcane, Groundnut, Blackgram,Greengram, Coconut,Cotton and Tobacco are the other important crops.

The follwing statement shows the area, yield rate and production of principal crops in Nagapattinam district during 1998-99.

Normally Paddy is raised in the entire district in three crops. The first crop is known as "Kuruvai" the short term crop with a duration of 100 to105 days from June/July to October/November. The crop cultivated after harvesting Kuruvai is called "Thaladi" which has a duration of 120 to 125 days from October to February/March. 'Samba', the long-term crop, with a duration of 145 to 150 days from August to January.

The salient features of some popular Paddy varieties cultivated in this district are tabulated as under below:

High yielding varieties of Paddy, Small millets, Pulses and Groundnut were continued to be sown in this district. About 99% of the Paddy area was covered under high yield variety. Among them ADT-36, ADT-38, CR-1009 and TKM-9 were the most popular varieties in this district. Apart from this, some traditional local varieties like Kuruikar, Kulivetichan, Kulla kar are also in vogue in some part of this district mainly in Vedaranyam Taluk.

Horticulture

While comparing the past years, not a considerable increase in the area of horticulture and vegetables are grown in this district. The farmers are reluctant to raise these because of soil condition. However, the table given below explains the coverage of horticulture crops during 1997-98 and 1998-1999

Sl.No	Crops	Area (In Hec.) 1997-98	1998-99

Irrigation

The chief sources of irrigation in the district are rivers, tubewells, wells and a few rained tanks. These tanks and the wells are situated in the upland regions. Cauvery and Coleroon are the most important river in the district. Strictly speaking agriculture in the district is dependent on the river Cauvery as most of the irrigated area in the district derive water from Cauvery and its numerous branches. About 99% of the total net area irrigated is served by canals and these canals are fed by the river Cauvery.

As Nagapattinam district is a tail end delta district, water shortage is faced by the agriculturists. It affects the crop yield. Apart from the major sources of irrigation, by the above sources, Nagapattinam is also benefited from other sources like lift irrigation in limited area. Actual area irrigated by different sources in Nagapattinam district during 1998-99 are as follows:

Source	Area (in Hectares)
Government Canals	126,801
Tanks	---
Flow irrigation	---
Lift irrigation	---
Wells	---
Tube Wells	---
Other Sources	322
Total Net Area Irrigated	127,123
Area Irrigated more than once	23,531
Total Cropped Area irrigated	153,654

The gross irrigated area as percentage to total cropped area is 61% and the net area irrigated as percentage of net area sown is 85% during the year 1998-99.

Cauvery and its tributaries irrigated rather more than half of the district. The tubewell irrigation is mostly supplementary to the major irrigation. Area irrigated exclusively under minor irrigation sources is very meagre.

The following statement shows the breakup of the total irrigated area of 153,654 hectares (by all sources) by crops during the year 1998-99 in Nagapattinam district.

Major sources of water supply for irrigation in this District are as follows:

Irrigation Source	Number / Length
Canals	9/548 kms.
Irrigation Wells	7987
Tube Wells	14821
Reservoirs	-

Rural Water Supply

As on 1.4.2000, there were 2,122 fully covered habitations (1678 lpcd) and 444 partially covered in Nagapattinam District. Thus, a total of 2,586 habitations had been covered under the rural water supply scheme.

Animal husbandry

Next to Agriculture, rearing of cattle is the subsidiary occupation for the rural farmers in this district. The position of livestock in Nagapattinam has so improved but not appreciable. Animal husbandry however could not keep pace with the developmental works undertaken in the field of latest agricultural techniques and so the district cannot boost of any special breed of cattle and the indigenous cattle and still continue to be poor quality. This unfortunate position is generally attributed to the absence of pasture land and to scarcity of fodder crops in the district. Cattle development has taken place through the setting up of an intensive cattle development project with one clinician center, 4 Veterinary hospitals, 20 Veterinary dispensaries, 2 mobile veterinary units, 52 sub centres in the district. Frozen Semen-bank is being established in each veterinary hospitals with cross breed varieties like Sindhi cross breed Jercy crossbreeds and Murrah are produced. Poultry extension center is not so welcome in this district. A minimum number of poultries are maintained in some part of this district by the Animal Husbandry Department.

The following table gives the livestock and poultry population of Nagapattinam District during 1998-99.

Sl.No	Livestock/Poultry	Total
1	Cows	249628
2	Buffaloes	76662
3	Sheep	12909
4	Goats	328796
5	Poultry	466805

The total milk production in this District during 1999-2000 was 1,05,303 tones out of which 55,832 tones was cow's milk and 49,341 tones was buffaloes milk.

Fisheries

Nagapattinam is one among the thirteen districts of Tamil Nadu engaged in marine fishing and its fish production is about 20% of total catch of the State. The district is predominantly a coastal district having a large coast line of 147 Kms. linking nearly about fishing centres with 50 marine fishing villages. The fisherman population in Nagapattinam district is approximately 56,760. Nagapattinam district stands next to Ramanathapuram in fish production.In Nagapattinam district river regulaters, irrigation tanks, ponds are the important sources of inland fishing that is fully utilized for development of inland fishing. The inland fish catch during the year 1998-99 was 9,505 tones.

Industry

This district is lagging behind in industries. People of the district depend more on agriculture than any industry as this is a backward district, but there are certain industrial establishments, which slowly pave

way for urbanization and industrialization. Small scale industry and traditional crafts are very limited in the district. In the year 1998-99, there were 98 factories in this district. The estimated employment in these factories was 3,777 persons. The details of number of small scale industries registered and working during 1998-99 in the district are given below.

Cottage industries and handicrafts like Handloom, Silk and Cotton Sarees which are renowned and still cherished in some part of the district . Next to handloom industry comes mat industry. Mats made of korai, palm and coconut leaves are made in some villages. Of which, the superior varieties of mats are made in Kollidam block villages. Ornamental fans, caps and toys are made out of palmyra leaves. They are artificially painted and decorated with gold foils and silk threads, which finds good market in the pilgrim centres like Nagore and Velankanni. The district is equally well known for articles consisting of beautiful model of Hindu idols, temples, mosques, flower, garlands, bouqucts, parrots and peacocks. Pith is growing on the river beds in the Sirkazhi, Kollidam, Mayiladaduthurai.

Though Handlooms industry occupies an important place in the economy in Nagapattinam district it is not flourished. A minimum number of 173 families at Sikkal, Sangamangalam, Sooramangalam, Koranadu villages of this district were engaged in handloom industry. Nearly about 400 looms were in the district, of which more than half were not functioning. All the looms were producing only Silk sarees. The well known pure silk sarees of Koranadu is known as 'Kottadi' sarees with decorative lace borders and squares in the body. Cheap varieties of such sarees are also manufactured out of mixture of cotton and silk fabrics. Silk sarees with a value of Rs.47 lakhs was produced during 1998-99 in the district. Name of the important Industries in the district are listed as under.

Trade and Commerce

There are 8 regulated markets in Nagapattinam District.

Transports and Communications

Nagapattinam is known for its historic Port. Presently it is classified as a minor port. Till 1993, cargoes were handled through this port to Sri Lanka, Malaysia and Singagpore. However, since 1993 the Port became disfunct.The effort are on to revive the port. As a result of efforts taken by Tamil Nadu Maritime Board the first ship landed at Nagapattinam on 25.5.1999 after a gap of more than six years. Presently, Palm oil is being imported from this port. There is a captive minor port near Thirukadaiyur to

cater the need of PPN Power Generating Companies and 330 MW Power Projects at Pillai Perumanallur. Both these ports are under the control of Tamil Nadu Maritime Board.

There were 7,432 commercial vehicles and 44,832 non-commercial vehicles registered in Nagapattinam District in 1999-2000. The following table gives the details:

Bus Stop and Railway Stations

All the towns and 360 villages (out of 367) in this District have been connected with bus facilities. There were also 2 Railway Stations in the District (one in rural and another in urban).

Electricity

All the villages in the district were electrified. Though agriculture in the district depends on Cauvery water, sinking of bores, energising of tube wells are taking place gradually due to failure of monsoon and other reasons. About 11686 tube wells have been energised during 1999. Free electricity is also provided to farmers for agriculture practices and also light is provided at free of cost to slum dwellers by Government. The statement given below shows the annual consumption of electricity during 1999 under different categories in Nagapattinam district.

Sl.No.	Category	Consumption (in Units)
1	Agriculture	2.3
2	Industry	0.2

After the finding of natural gas in this district, one Gas Turbine Power Project at Narimanam in Nagapattinam taluk have been commissioned. There were two turbines of 5 MW each (Total 10 MW). Presently, a 330 MW Private Sector Power Project based on Naptha fuel is under construction at Thirukadaiyur in Tharangambadi taluk. Another Power Project of 60 MW based on natural gas has been sanctioned by the State Government at Kuthalam (Manthur) in Mayiladuthurai taluk.

Once these power projects are completed the power situation in the district may improve.

The rich exploration of oil in the region have opened the gate for petro-chemical industries. The district has been figured in the oil map of India. There is good potential for green revolution, agro-processing industries and the salt based industries.

Education

For the welfare of poor students 31 Scheduled Caste Hostels, 11 Most Backward Class Hostels and 15 Backward Class Hostels are being run by the Government of Tamil Nadu in the districts.

About 50 Government and Private libraries and 35 reading rooms are located at different parts of the district. Nearly about 6 lakhs book are available in all these libraries.

(v) Census Concepts

Building

A 'Building' is generally a single structure on the ground. Sometimes it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, workshops, worksheds, Schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that building which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence etc.

Usually a structure will have four walls and a roof. But in some areas the very nature of construction of houses is such that there may not be any wall. Such is the case of conical structures where entrance is also provided but they may not have any walls. Therefore, such of the conical structures are also treated as separate buildings.

Permanent houses

Houses, the walls and roof of which are made of permanent materials. The material of walls can be any one from the following, namely, galvanized iron sheets or other metal sheets, asbestos sheets, burnt bricks, stones or concrete. Roof may be made of from any one of the following materials, namely, tiles, slate, galvanized iron sheets, metal sheets, asbestos sheets, bricks, stones or concrete.

Semi-permanent houses

Houses in which either the wall or the roof is made of permanent material and the other is made of temporary material.

Temporary houses

Houses in which both walls and roof are made of materials, which have to be replaced frequently. Walls may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, plastic, polythene, mud, unburnt bricks or wood. Roof may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, wood, mud, plastic or polythene.

Dwelling Room

A room is treated as a dwelling room if it has walls with a doorway and a roof and should be wide and long enough for a person to sleep in, i.e. it should have a length of not less than 2 meters and a breadth of at least 1.5 meters and a height of 2 meters. A dwelling room would include living room, bedroom, dining room, drawing room, study room, servant's room and other habitable rooms. Kitchen, bathroom, latrine, store room, passageway and verandah which are not normally usable for living are not considered as dwelling rooms. A room, used for multipurpose such as sleeping, sitting, dining, storing, cooking, etc., is regarded as a dwelling room. In a situation where a census house is used as a shop or office., etc., and the household also stays in it then the room is not considered as a dwelling room. But if a garage or servant quarter is used by a servant and if she/ he also lives in it as a separate household then this has been considered as a dwelling room available to the servant's household. Tent or conical shaped hut if used for living by any household is also considered as dwelling room.

A dwelling room, which is shared by more than one household, has not been counted for any of them. If two households have a dwelling room each but in addition also share a common dwelling room, then the common room has not been counted for either of the households.

Census House

A 'census house' is a building or part of a building used or recognised as a separate unit because of having a separate main entrance from the road or common courtyard or staircase, etc. It may be occupied or vacant. It may be used for residential or non- residential purpose or both.

In certain peculiar situations, the manner in which buildings and census houses were identified for numbering in the field by the enumerators is described hereunder:

Sometimes a series of different buildings are found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably, the entire hostel / hotel building was treated as one census house. but if such

built at different times and owned by different persons. In such cases, though the whole structure with all the adjoining units apparently appears to be one building, each portion was treated as a separate building and its constituent units as separate census houses.

On the other hand, one may come across cases, particularly in large cities of multi-storeyed ownership flats. In these cases while the structure looks like one building, different persons own the flats. In case of such multi-storeyed structures, having a number of flats owned by different persons, the entire structure was treated as one building and each flat as a separate census house.

If within a large enclosed area, there are separate buildings owned by different persons then each such building is treated as a separate building. There can be a situation where within an enclosed compound there are separate buildings owned by an undertaking or company or even government that are actually in occupation of different persons. For example, Indian Oil Corporation colony where the buildings are owned by the Corporation but these are in occupation of their employees. Each such building was treated as a separate building. But if in any one of these buildings there were flats in occupation of different households, each such flat was reckoned as a separate census house.

Sometimes it becomes difficult to apply the definition of census house strictly in certain cases. For example, in an urban area, if a flat has five rooms, each room having direct entrance from the common staircase or courtyard. By definition, this has to be treated as five census houses. If all these five rooms are occupied by a single household it was not realistic to treat them as five census houses. In such a case, 'singleness' of use of these rooms along with the main house should be considered and the entire flat was treated as one census house. On the other hand, if two independent households occupy these five rooms, the first household living in 3 rooms and the second household occupying 2 rooms, then considering the use, the first three rooms together were treated as one census house and the remaining rooms as another census house. But if each room was occupied by an independent household, then each such room was treated as a separate census house.

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably; the entire hostel/hotel building was treated as one census house., but if such hostels/ hotels have out-houses or other structures used for different purposes or the same purpose, then each such structure attached to the main hostel/hotel was treated as a separate census house.

In some parts of the country, in rural areas, the pattern of habitation is such that a group of huts, located in a compound, whether enclosed or unenclosed, is occupied by one household. While the main residence may be located in one hut, other huts may be used for sleeping, as a kitchen, bath room, baithak, etc. Though each of the huts was a separates structure, they form a single housing unit and therefore, have to be treated collectively as one building and one census house. If some of the huts are used by one household and the others by a second household as residence, then the two groups of huts were treated as separate census houses. However, if there were also other huts in the compound used for other purposes and not as part of the household's residence such as, cattle shed, workshed, etc., these were treated as separate census houses.

On the other hand, in urban areas, where more than one structure within an enclosed or open compound (premises) belonging to the same person, e.g., the main house, the servant's quarter, the garage, etc., only one building number was given for this group and each of the constituent a separate census house number.

Only cases where a structure with roof and pillars has come up was treated as a building.

Village

The basic unit for rural areas is the revenue village, which has definite surveyed boundaries. The revenue village may comprise of one or more hamlets but the entire village is treated as one unit for presentation of data. In unsurveyed areas, like villages within forest areas, each habitation area with locally recognized boundaries is treated as one village.

Rural-Urban area

The data in tables on Houses, Household Amenities and Assets are presented separately for rural and urban areas. The unit of classification in this regard is 'town' for urban areas and 'village' for rural areas. In the Census of India 2001, the definition of urban

area adopted is as follows:

a) All places with a municipality, corporation, cantonment board or notified town area committee, etc.

b) A place satisfying the following three criteria simultaneously:

   i) A minimum population of 5,000;

   ii) at least 75 per cent of male working population engaged in non-agricultural pursuits; and

   iii) a density of population of at least 400 per sq. km.(1,000 per sq. mile)

For identification of places which would qualify to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population engaged in non-agricultural activity were considered. To work out the proportion of male working population referred to above against b) (ii), the data relating to main workers were taken into account.

Apart from these, the outgrowths (OGs) of cities and towns have also been treated as urban under 'Urban Agglomerations'. Examples of out-growths are railway colonies, university campuses, port areas, military camps, etc., that may have come up near a statutory town or city but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the demographic criteria laid down at (b) above to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the towns as a continuous urban spread. Thus, the town level data, wherever presented, also includes the data for outgrowths of such towns.

City

Towns with population of 100,000 and above are called cities.

Urban Agglomeration

An Urban Agglomeration is a continuous urban spread constituting a town and its adjoining urban outgrowths (OGs) or two or more physically contiguous towns together and any adjoining urban outgrowths of such towns. In some cases, railway colonies, university campuses, port areas, etc., may come up near a city or statutory town outside its statutory limits but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the town as a continuous urban spread.

For the purpose of delineation of Urban Agglomerations during Census of India 2001, following criteria are taken as pre-requisites:

(a) The core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town; and

(b) The total population of all the constituents (i.e., towns and outgrowths) of an Urban Agglomeration should not be less than 20,000 (as per the 1991 Census).

With these two basic criteria having been met, the following are the possible different situations in which Urban Agglomerations would be constituted:

i) a city or town with one or more contiguous outgrowths;

ii) two or more adjoining towns with their outgrowths; and

iii) a city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

Household

A 'household' is usually a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household.Each such person was to be treated as a separate household. The important link in finding out whether it was a household or not was a common kitchen. There may be one member households, two member households or multi-member households.

Institutional Household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. To make the definition more clearly perceptible to the enumerators at the Census 2001, it was specifically mentioned that this category or households would cover only those households where a group of unrelated persons live in an institution and share a common kitchen.

Houseless household

Households who do not live in buildings or census houses but live in the open on roadside, pavements, in hume pipes, under flyovers and staircases, or in the open in places of worship, mandaps, railway platforms, etc., are treated as Houseless Households.

Scheduled Castes and Scheduled Tribes

Article 341 of the Constitution provides that the President may, with respect to any State or Union territory, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of the Constitution be deemed to be Scheduled Castes in relation to that State or Union territory. Article 342 similarly provides for specification of tribes or tribal communities or parts of or groups within tribes or tribal communities which are to be deemed for the purposes of the Constitution to be Scheduled Tribes in relation to the various States and Union territories. In pursuance of these provisions, the list of Scheduled Castes and/or Scheduled Tribes are notified for each State and Union territory and are valid only within the jurisdiction of that State or Union territory and not outside. In September 1956, by an amendment, the Presidential Order of 1950 and in all subsequent Presidential Orders relating to Scheduled Castes, the Hindu and the Sikh religions were placed on the same footing with regard to the specification of Scheduled Castes. Later on, as per the amendment made in the Constitution (Scheduled Castes) Order 1990, the Hindu, the Sikh and the Buddhist were placed on the same footing with regard to the recognition of the Scheduled Castes.

Language and Mother tongue

As per the census concept, each language is a group of mother tongues. The census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf mutes, the language usually spoken by the mother is considered as mother tongue. It is not necessary that the language spoken as mother tongue should have a script. The mother tongues returned by the respondents in census are classified and grouped under appropriate languages according to their linguistic characteristics.

Literate

A person aged 7 years and above who can both read and write with understanding in any language is taken as literate. A person who can only read but cannot write is not literate. It is not necessary that to be considered as literate, a person should have received any formal education or passed any minimum educational standard. Literacy could also have been achieved through adult literacy classes or through any non-formal educational system. People who are blind and can read in Braille are treated as literates.

Literacy rate

Literacy rate of the population is defined as the percentage of literates in the age-group seven years and above. For different age-groups the percentage of literates in that age-group gives the literacy rate.

Educational level

The highest level of education a person has completed.

Work

Work is defined as participation in any economically productive activity with or without compensation, wages or profit. Such participation may be physical and/or mental in nature. Work involves not only actual work but also includes effective supervision and direction of work. It even includes part time help or unpaid work on farm, family enterprise or in any other economic activity. All persons engaged in 'work' as defined above are workers. Persons who are engaged in cultivation or milk production even solely for domestic consumption are also treated as workers.

Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

Main worker

A person who has worked for major part of the reference period (i.e. six months or more during the last one year preceding the date of enumeration) in any economically productive activity is termed as 'Main worker'.

Marginal worker

A person who worked for less than six months of the reference period (i.e. in the last one year preceding the date of enumeration) in any economic activity is termed as 'Marginal worker'.

Non-worker

A person who has not worked at all in any economically productive activity during the reference period (i.e. last one year preceding the date of enumeration) is termed as 'Non worker'.

Cultivator

For purposes of the Census, a person is classified as cultivator if he or she is engaged in cultivation on land owned or held from government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation.

A person, who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation in exchange of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or

a combination of both (agricultural labourers) is not treated as cultivator.

Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, ground-nuts, tapioca, etc., and pulses, raw jute and kindred fiber crop, cotton, cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops – tea, coffee, rubber, coconut and betel nuts (areca).

Agricultural labourer

A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She/he has no risk in the cultivation, but merely works on another person's land for wages. An agricultural labourer has no right of lease or contract on land on which she/he works.

Household industry worker

Household industry is defined as an industry conducted by the head of the household herself/himself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act and should be engaged in manufacturing, processing, servicing and repairs of goods.

It does not include professions such as a pleader, Doctor, Musician, Dancer, Waterman, Astrologer, Dhobi, Barber, etc. or merely trade or business, even if such professions, trade or services are run at home by members of the household.

Other worker

A person, who has been engaged in some economic activity during the reference period but not as a cultivator or agricultural labourer or in Household Industry, is termed as a 'Other Worker (OW)'. The type of workers that come under this category of 'OW' include all government servants, municipal employees, teachers, factory workers, plantation workers, those engaged in trade, commerce, business, transport, banking, mining, construction, political or social work, priests, entertainment artists, etc. In effect, all those workers other than cultivators or agricultural labourers or household industry workers, are 'Other Workers'.

Work participation rate

Percentage of workers (main + marginal) to total population.

Population density

Population density is the number of persons inhabited per square kilometer of the area.

Age

Age is measured in terms of the completed number of years.

Sex ratio

Number of females per 1000 males in a population.

(vi) Non-Census Concepts

Improved drinking water

If the household had access to drinking water supplied from a tap, hand pump, tube well or well (protected or covered) situated within or outside the premises, it is considered as having access to improved drinking water.

It may be mentioned that such uniform definition may not be valid across all States.

System of sewerage

Generally, a sewerage system would mean a network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those

carrying both sewage and storm water are called combined sewers. However, in some towns, which are not provided with such underground sewerage system, it is served by open surface drain, box drain, silk pattern drain, etc., in these towns.

Type of latrine and method of disposal of night soil

There are three prevalent systems of disposal of human wastes, viz. :

(i) underground sewerage,

(ii) sanitary water flush latrines with individual disposal systems, like septic tank, leaching cess pool and collecting well, and

(iii) dry type of latrines with manual scavenging.

the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cistern (or hand flushing). Through this sewer the fecal matter is transported without the need for scavenging. This system generally exists in cities and big towns.

Where the street sewer does not exist, these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Here the liquid wastes from the water closet is disposed of locally in leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil, which renders the harmful liquid bacterially innocuous by the slow process of filtration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleaned at periodic intervals by a suitable device. The dry type of latrines are of service type latrines from where human excreta is removed by scavengers from house to house, in most cases carrying it on their heads or shoulders or in baskets with handle or wheel barrows. These are then collected in bullock carts or trucks or tractors and trolleys for being carried to the dumping grounds.

Fertility

In demography, the word fertility is used in relation to the actual production of children or occurrence of births specially live births. Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating the number of births to a full or part of the population, such as number of married women or number of women of child-bearing age. The definitions of the terminology used in computing different fertility rates are mentioned below:

Crude birth rate (CBR)

Ratio of the number of live births in a year to the mid year population, normally expressed per 1,000 population.

$$\text{CBR} = \frac{\text{Number of live births during the year}}{\text{Mid–year Population}} \times 1{,}000$$

Crude death rate (CDR)

Ratio of the number of deaths in a year to the mid year population, normally expressed per 1,000 population.

$$\text{CDR} = \frac{\text{Number of deaths during the year}}{\text{Mid-year Population}} \times 1{,}000$$

Natural growth rate

Growth rate is obtained as the difference between crude birth rate and crude death rate in the absence of migration.

Age specific fertility rate (ASFR)

Number of live births in a year to female population in any specified age-group normally expressed per 1,000 women.

$$\text{ASFR} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1{,}000$$

Age specific marital fertility rate (ASMFR)

Number of live births in a year to married female population in any specified age-group normally expressed per 1,000 married women.

$$\text{ASMFR} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1{,}000$$

General fertility rate (GFR)

Number of live births per 1,000 women in the reproductive age-group (15-49) years in a given year.

$$\text{GFR} = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age-group (15-49) years}} \times 1{,}000$$

General marital fertility rate (GMFR)

Number of live births per 1,000 married women in reproductive age-group (15-49) years in a given year.

$$\text{GMFR} = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) years}} \times 1{,}000$$

Total fertility rate (TFR)

It is obtained as the total of the age specific fertility rates (number of children born per woman of the particular age) for the entire reproductive age span. It provides the average number of children that will be born to a woman under the fertility levels indicated by the age specific fertility rates assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TFR} = \frac{5 \times \sum^{45\text{-}49}\text{ASFR}_{15\text{-}19}}{1{,}000}$$

Total marital fertility rate (TMFR)

Average number of children that would be born to a married woman if she experiences the current fertility pattern throughout her reproductive span (15-49) years assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TMFR} = \frac{5 \times å^{45\text{-}49}\text{ASMFR}_{15\text{-}19}}{1{,}000}$$

Age-specific mortality rate (ASMR)

Number of deaths in a particular age and sex group per 1000 population of the same age-group.

$$\text{ASMR} = \frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of the same age-group}} \times 1{,}000$$

q1

Probability of dying between birth and age 1. This can be used as approximate value of Infant Mortality Rate (IMR) which gives the ratio of number of deaths in a year of children aged less than one year to the number of births in that year.

q2

Probability of dying between birth and age 2.

q5 :

Probability of dying between birth and age 5. This indicator is also known as Under Five Mortality Rate (U5MR).

Infant mortality rate (IMR)

Ratio of the number of infant deaths (deaths of children below one year) in a year to the number of live births in that year.

$$\text{IMR} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Infant mortality rate comprises of two parts, viz., Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz., Early neo-natal mortality rate and late neo-natal mortality rate. These are defined as:

Neo-natal mortality rate (NMR)

Number of infants dying within the first month of life (28 days or under) in a year per 1,000 live births of the same year.

$$\text{NMR} = \frac{\text{Number of infant deaths aged 28 days or under during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

i) Early neo- natal mortality rate

$$= \frac{\text{Number of infant deaths of less than 7 days during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

ii) Late neo-natal mortality rate

$$= \frac{\text{Number of infant deaths of 7 days to less than 29 days during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Post neo-natal mortality rate (PNMR) *s*

$$= \frac{\text{Number of deaths of 29 days to less than One year during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Peri-natal mortality rate (PMR)

Number of still births plus deaths within 1st week of delivery per 1000 births in a year.

$$\text{PMR} = \frac{\text{Number of still births and infant deaths of less than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1{,}000$$

Still birth rate (SBR)

$$= \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1{,}000$$

Maternal mortality rate (MMR)

Number of deaths of women in the age-group 15-49 while pregnant or within 42 days of termination of pregnancy from any cause related to pregnancy and child birth per 1,00,000 live births in a given year.

$$\text{MMR} = \frac{\text{Number of maternal deaths to women in the age group 15-49}}{\text{Number of live birth}} \times 1{,}00{,}000$$

Eligible couple (Couples per 1,000 population)

Number of currently married females in the age-group 15-44 years per 1000 persons of all ages.

Child woman ratio (0-4)

1. Number of children in the age-group 0-4 years per 1000 women in the age-group 15-49 years.

Child woman ratio (5-9)

2. Number of children in the age-group 5-9 years per 1000 women in the age-group 15-49 years.

Migration, Internal and International migration, Impact of migration.

Migration

Migration is the third component of population change, the other two being mortality and fertility. A person is considered as a migrant by place of birth if the place in which he is enumerated during the Census is other than the place of his birth. Similarly

a person is considered as a migrant by place of last residence if the place in which he is enumerated during the Census is other than his place of immediate last residence. By capturing the last of the migrations in cases where persons have migrated more than once, this concept would give a better picture of current migration scenarios.

Internal and International Migration

The migrational movements are of three types (i) Migration within the state itself with its components (a) Migration within the district of enumeration (intra district migration) (b) Migration from one district of state to another district of state (interdistrict migration) (ii) Migration from one state to another state of the country interstate migration (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration.

Impact of Migration

As in 1991 and 2001 Census, like previous Censuses, had collected migration details for each individual by place of birth and last residence. Data on last residence along with details like duration of stay in the current residence and reason for migration provides useful insights for studying migration dynamics of population.

Civic status of urban units

Civic Status of a town/city is determined on the basis of Civic Administrative authority of the town e.g., Municipal Corporation/Corporation, Municipal Committee/Municipal council, Municipality etc.

Size class of UA / town

sSize-class of UA / Town is based on the population. UAs / Towns with 100,000 and above population are classified as Class I UAs/Towns. These Class I UAs./Towns are now further sub classified into seven sub classes namely M1 to M7 depending on the population size of UA/City/Town. These are :

M7 (5,000,000 and above);

M6 (2,000,000 to 4,999,999);

M5 (1,000,000-1,999,999);

M4 (500,000-999,999);

M3 (300,000-499,999);

M2 (200,000-299,999); and

M1 (100,000-199,999).

Towns with 50,000 to 99,999 population are classified as Class II towns, 20,000 to 49,999 population are Class III towns, population with 10,000-19,999 are Class IV towns, population with 5,000 and 9,999 are Class V towns and towns with less than 5,000 population are Class VI towns.

Slum area

The Slum Areas (Improvement and Clearance) Act, 1956, which was enacted by the Central Government defined slums as:

a) Areas where buildings are in any respect unfit for human habitation; or

b) are by reasons of dilapidation, overcrowding, fault arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light or sanitation facilities, or any combination of these factors, are detrimental to safety, health or morals.

Mega city

The concept of 'Mega city' is a recent phenomenon in the Urban Sociology and is defined in term of metropolitan city in the form of large size, problem of management of civic amenities and capacity to absorb the relatively high growth of population. Indian Census in 1991 treated the population size of 5 million and above as the cut off point to identify a place as the mega city. Whereas, for the purpose of inclusion in Centrally Sponsored Scheme for Infrastructure Development in Mega cities the Ministry of Urban Affairs and employment, Department of Urban Development adopted the criteria of 4 million and above population as per 1991 Census for Mega Cities. In 2001 Census, cities with 10 millions and above population have been treated as Mega cities.

(vii) CENSUS 2001 FINDINGS

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 2001 Census is the midnight of 28th February, 2001 i.e. the Census provides a snapshot of the population of the country, as it existed at the midnight of 28th February, 2001. Actual enumeration was spread over a period of 20 days from 9th to 28th February, 2001 followed by revisional round up to 5th March, 2001 for up dating of the population figures with reference to the mid night of 28th February, 2001. Household Schedule was canvassed by the enumerator and with a view to ensuring uniformity in approach in understanding the various concepts and in proper eliciting and recording of the information, the enumerators and supervisors were imparted both theoretical as well as practical training intensively in 3 rounds.

As a prelude to the actual census the urban and rural areas were identified and listed out in respect of each administrative unit. The Directorate of Census Operations had prepared the list of urban areas and simultaneously, a list of villages. These lists formed the basic frame for the organization of the Census Operations. There after, geographical areas that could be conveniently covered by each enumerator were carefully carved out to constitute the enumerator's block (EB).

The second major step was the house listing operation, which was carried out in this District during April, 2000. Thereafter, in order to adhere to the prescribed workload norms the actual Census enumerator's blocks were carefully, demarcated on the basis of the house list population and the layout sketches and notional maps prepared for the house listing operation. House listing operation was also utilized to collect wealth of information on items such as predominant material used for construction of houses, amenities available to the census households, number of living rooms etc.

The above table describes the pattern of the taluk level distribution of population in total, rural and urban areas of Nagapattinam District. In addition it gives the total number of villages of each taluk and the number of inhabited villages along with the number of towns in each taluk of the Nagapattinam District. Of the 7 taluks, it is noticed that Myladuthurai taluk tops in the population with 3,67,074, followed by Sirkali and Nagapattinam follow the highest with 19.62% and 17.49% respectively. The lowest population recorded in the taluk of Thirukkuvalai with 55907 (3.79%). In rural population, Myladuthurai ranks first with 259,850 of the 7 taluks followed by Sirkali taluk and the lowest being the Thirukkuvalai taluk. Comparing the population of urban areas of Nagapattinam district, Myladuthurai taluk occupies the top rank with 107,224 followed by Nagapattinam taluk with 101638. Kilvelur taluk is the lowest with 17576. It may note that in Thirukkuvalai taluk, there is no urban area. The increase in the growth rate of the population is 8.07% in total, 6.01% in

rural and 15.98% in urban. The total number of villages of Nagapattinam district is 492 while the inhabited village is 487. Myladuthurai ranks first as far as number of villages are concerned followed by Sirkali, Nagapattinam, Tharangambadi and Vedaranyam taluks. There is no urban area in Thirukkuvalai taluk.

SCHEDULED CASTES AND SCHEDULED TRIBES

For discharging the constitutional obligation by the Government towards the Scheduled Castes and Scheduled Tribes, one of the basic requirements is the availability of population details for each notified Castes and Tribes. To meet this requirement, the office of the Registrar General, and Census Commissioner, India has been providing such details since the 1951 Census. The necessary data about the Scheduled Castes and Scheduled Tribes are provided for evolving suitable plans for their socio-economic upliftment and both the planners and administrators heavily depend on this data. The data are collected on the aspects of age, sex, and marital status, economy, education, fertility etc., for Scheduled Castes and Scheduled Tribes in addition to the aspects on language and religion.

TABLE I: SCHEDULED CASTES AND SCHEDULED TRIBE POPULATION

District	Total/ Rural/ Urban	Total Population	Population percentage	
			Scheduled Castes	Scheduled Tribes

* Based on the improved drinking water source, drinking water supply has been classified as 'Improved ' or otherwise. If the household has access to drinking water supplied from a tap or a hand pump / tube well situated within or outside the premises it is considered as having access to 'Improved drinking water source'. However, the concept of improved drinking water is state specific and this is to be considered accordingly.

Note: Percentage is to be given in brackets after the number of households .

Bathroom means bathroom within the house

Toilet means toilet within the house

Drainage means closed and open drainage

The table provides the percentage of house holds having improved drinking water sources, electricity, bath room, toilet and drainage facilities in the rural and urban areas of Nagapattinam District. It is seen that 64.91% of households having the facility and improved drinking water followed with facility of electricity by 26.13%.

(X) Brief description of places of religious, historical or archaeological importance in villages and places of tourist interest in the towns of the district.

The District is known for its temples and historical places like Poompuhar and Tharangambadi. The famous Durgah at Nagore and Roman Catholic Church at Velankanni are also in this district. There are many other places of tourist interest which attracts tourists from different parts of the country and abroad. Following are some of the important places of tourist interest.

Poompuhar

This was ancient trading town of the Chola dynasty. Poompuhar also called as Kauveripoompattinam in Sirkali taluk is one of the important tourist attraction spot in the district. It is believed that the original city was submerged in the sea and at present it is a small village about 24 Kms east of Mayiladuthurai. It is considered to be a sacred bathing place as Mother Cauvery confluence with sea here. Large crowds assemble here on ADIPERUKKU festival (18th day of Tamil month ADI) and also on the new moon day of Tamil month Thai. Indra Vizha festival is celebrated during Chithirai Pournami (Full Moon day).

It is the birth place of Saint Pattinathar and Kovalan and Kannagi of Silapathikaram. The Tamil Nadu Government have constructed a beautiful art gallery depicting the scenes from the epic Silapathikaram about Kovalan, Kannagi and Madhavi.

Tharangampadi Fort

In Tharangampadi, formeerly known as Tranquebar, there is a famous Danish Fort. It has got its international tourist attraction for its archaeological importance. This fort was raised in the 16th century. The Dutch missionaries also built churches here like Jerusalem church and the church of Our Lady of Rosary.

Kambar Kottam

A monument called **Kambarkottam** was built by Government of Tamil Nadu in **Tharazuundur** village about 19 kms south of Mayiladuthurai in memory of Kambar who wrote the famous ethic Ramayana.

Kodiyakarai (Point Calimere)

This is the only wild life Sanctuary where one can see both wild life and birds in a single place Calimere is the unique geographical feature where Bay of Bengal and Palk Strait meets. In the map of Tamil Nadu and India it is easily identified due to a sharp 90% turn of land mass.

Point Calimere, an important tourist place and a heaven for bird watchers is situated near Vedranyam 62 kms from Nagapattinam and is in the northern point of Palk Strait. The sanctuary is noted for its inaudiable congregation of black Duck spotted deer, wild pigs, wild ponies and heavy concentration of migratory water fowls, twenty to thirty thousands of flamingoes can be seen here at one time during the winter months. During spring when the trees and shurbs are laden with wild fruits, thousands of birds, like green pigeons, mynahs barbets etc. can be seen. A bath in the sea at Kodiyakarai, a sacred place, is considered holy especially on the new moon day of Tamil months *Thai, Adi* and *Purattasi.*

Nagapattinam

There is a beautiful natural sea beach developed during the year 1998-99 under State Government's "Namakku Nammee Scheme". The beach is about 2 Km. long. It is said that after Marina beach in Chennai, it is the most beautiful beach in Tamil Nadu coast.

There is a District Museum housing important artifacts reflecting the culture and history of the district.

PILGRIM CENTRES

The Nagapattinam District is the symbol of the confluence of Hindusisam, Christianity and Islam. The district is known for its secular nature where people from different religions live in perfect harmony. Millions of devotees visit various pilgrim centres in the district throughout the year. Amongst the well known temples are those of Sikkal Singaravalavar Temple, Ettukudy Murugan,Abirami Amman at Thirukkadaiyur, Devi Neelayathatcula Amman at Nagapattinam. Besides, many more temples which exhibit the noted architecture of Chola and Nayakka Dynasties. For all the Navagrahas there are temples in Cauvery delta region, the only place in the world where Navagraha temples exists. Three of these, nine temples namely Vaitheeswaran Koil (Chevvai Mars), Thiruvenkadu (Budhan Mercury) and Kil Perumpallam (Kethu) in this district. The other temples are in Thiruvarur and Thanjavur district of Tamil Nadu and Karaikal (Union Territory of Pondicherry).

Vaitheeswaran Koil

The Vaitheeswaran koil, 6 kms south of Sirkazhi, is dedicated to Sri Vaidyanatha Swamy and Thaiyalnayaki. This is Puulirukkuvelur (Pul-bird Rukkuveda, vel-Murugan, Oor-Siva). In the southern praharam of this temple, the Jedayukundam is located where it is believed that Jedayu had his last breath and Lord Rama performed the last rites for him. A famous rare bronze image of 'Angarakan' is worshipped here and it is believed that those who worship the deity is releived of Angaraka Dosham. Taking bath in the holy temple tank and worshipping Lord Vaityanathaswamy is believed to cure all diseases. Lord Selvamuthukumaraswamy (Subramaniya) a beautiful bronze idol with his two consorts Valli and Deivanai attracts all people.

Sirkazhi is also the birth place of Saint Thirugnanasambandam of 6th century. It is believed that Godess Parvathi offered 'Gnanapal' (holy milk) from her breast to the Saint at the age of three in the temple dedicated to Brabamapureeswarar and from moment the Saint began to sing poems about the God.

Thirunangoor

A village situated about 8 kms east of Sirkazhi has 9 Vaislmevita shrines. Garuda Sevai is celebrated on the next day of New moon day of the Tamil month Thai (Jan-Feb) every year.

Thirukadaiyur

Sri Amirthakadeswaraswamy temple is situated in Thirukadaiyur village about 20 Kms from Mayiladuthurai. The place is also called Thirukadavur where God kicked Yama to death and blessed Markendaya being ever remain a youth of sixteen. Panchaloloha icon 'Kaalasambhara kadaduval' facing south depicts how Lord came out of Lingam when Yama put his Kelepasse string around Markandya and tried to drag him away from the Lord. In doing so the passa string was thrown round Sivalinga itself. Every day many people celebrate the completion of their 60th and 80th birth anniversaries here by performing 'Mrithiyunchaya Homa' for a long and happy life. During the period of King Saraboji, a reputed scholar, Abiramapattar, a devotee of Goddess Abirami has immoralised himself by showing moon light on a new moon day by the grace of Goddess Abiramim by singing 'Abirami Andathi' in honour of goddess.

Anathamangalam Anchaneyar

PRIMARY CENSUS ABSTRACT

Brief note on Primary Census Abstract

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another.

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5470 sub-districts, 5161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars; Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation (**Annexure-II).** The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration. The Schedules for both the phases were scanned through high speed scanners in fifteen data centres across the country and hand-written data from the schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing. The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million schedules consisting of about 1028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain. This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rural areas and the ward level in the urban areas. Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use. The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and

their senior officers were required to make detailed presentations of data for their own state both in respect to the quality and the coverage and only after the full possible satisfaction of the TFQA, the population data was cleared.

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population. In the earlier censuses, the total Scheduled Castes and Scheduled Tribes population were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual. Two Special Task Forces, one on Religion and the other on Scheduled Castes/Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses.

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge. The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encountered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature. Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels.

The entire work relating to the data validation and scrutiny was completed by all the States/Union territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division.

Primary Census Abstract is the basic table compiled on full count basis from the information collected in the Household Schedule. It is adjunct of the A-Series census tables which gives basic demographic information on area of the unit, number of households, total population, population of age group 0-6, population of Scheduled Castes and Scheduled Tribes, literates, main and marginal workers classified into four industrial categories and non-workers. The publication contains District Primary Census Abstract, Appendix to District Primary Census Abstract, Primary Census Abstract for Scheduled Castes, Primary Census Abstract for Scheduled Tribes, Village Primary Census Abstract and Urban Primary Census Abstract.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census Abstract. This practice was continued in 1991 also. In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and in its place, four-fold industrial

classification of both 'main workers' and 'marginal workers' are included. In 1981 census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis of literacy data.

The data in the Primary Census Abstracts are presented at different levels, The District Primary Census Abstract is presented at District/ C D block/ UA/City/Town, Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented at District/C D block/ Town, Village Primary Census Abstract is presented villagewise for each C D block and Urban Primary Census Abstract at Town/Ward***** level. The Primary Census Abstract data for each of these characteristics is presented by sex and rural-urban residence.

The District Primary Census Abstract has been presented in 59 columns, Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes has been presented in 52 columns, Village Primary Census Abstract and Urban Primary Census Abstract has been presented in 58 columns. The information on each village under a C D block are presented in the Village Primary Census Abstract and each of the wards under a town has been provided in the Urban Primary Census Abstract exist in the district. The Data was presented for villages C D block-wise for the first time in 1991 Census. This practice is continued in 2001 Census also.

The concepts and definitions used in the column heading are already explained under the sub heading 'Census concepts' in the Analytical note. The Total population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts is as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tahasils, P.Ss and by the local bodies in respect of towns are given in sq.kms. The area figures of the villages supplied by the Tahasildars in acres have been converted and shown in hectares. The area figures of the C D block is the total of the village areas coming under each C D block. The area figures for the district supplied by the Surveyor General of India have been adopted to maintain uniformity at the national level. The total area figures of all the Tahsils/C D blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of P.S./Tahsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tahsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different levels.

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on total population, Scheduled Castes population and Scheduled Tribes population for each town.

FERTILITY AND MORTALITY MEASURES

FERTILITY LEVELS

In demography, the word fertility is used in relation to the actual production of children or "occurrence of births specially live birth". Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating number of births to size of some section of the population, such as number of married couples or number of women of child bearing age.

In other words, it is a major component of population growth. In the 1991 Census, questions of fertility related to age at marriage, number of surviving children at present, number of children ever born alive and children born alive during the last one year were asked. The first three questions were asked to all ever-married women and the last question related to currently married women.The same data was gathered in 2001 census also but the same is not readily available for presentation.

SELECTED INDICATORS ON FEMALE NUPTIALITY, 1991

State / District	Total/ Rural/ Urban	Mean age at marriage of currently married women			Percentage of currently married women with age at marriage below 18		
		Total	Who married during		Total	Who married during	
			1981-86	1986-91		1981-86	1986-91
Tamil Nadu	T	19.1	19.3	19.7	31.6	28.2	24.5
	R	19.0	19.1	19.3	32.2	30.2	27.8
	U	19.3	19.7	20.3	30.4	24.4	18.6
Nagapa-ttinam	T	19.1	19.4	19.6	31.2	26.4	24.4
	R	19.1	19.3	19.4	31.1	26.9	25.6
	U	19.2	19.7	20.1	31.7	24.6	21.0

Note: The latest available is presented in this table

The above table presenting the female age at marriage relates to all women who are living with their husbands. Some of them might be recently married and some of them decades ago. In view of this, the figures mentioned in the table should be regarded as indicating the situation for the population as a whole.

It is observed from the above table that the mean age at marriage of currently married females in Nagapattinam District was 19.09 years in 1991, slightly lower than the corresponding state level of 19.12 years. In the rural and urban areas also, sametrend is observed in the district level when compared with those of the corresponding state level in the above table. The mean age at marriage of the currently married females has increased by about 0.24 years from 19.37 years who married during 1981 - 86 to 19.61 years who married during 1986 - 91 in the district as is evident from the above table.

Presently, the statutory minimum age at marriage for females was 18 years. It is worth examining the proportion of the currently married females whose age at marriage was below this limit during the periods 1981 - 86 and 1986 - 91. It is observed from the table that this proportion has decreased from 26.37 percent during 1981 - 86 to 24.39 percent in 1986 - 91 in the district, lower than the corresponding state level. Same trend is observed in case of rural and urban areas also.

CHILD MORTALITY LEVELS

The estimates presented here have been obtained using the data on the number of children ever born and number of children surviving to ever-married women. Information on questions on children ever born and children surviving canvassed for all ever-married women have been tabulated by age of the mother. From this, estimates of child mortality (qi) have been worked out using Brass technique, where q (i) is the probability of a newborn child dying before age (i) = 1,2,3 and 5.

It is observed from the table given below that the child mortality estimates in the district and the state has decreased in 1991 when compared to those in 1981. The child mortality estimates at the district level is observed generally lower than the estimates at the state level.

ANNEXURE III

VARIOUS MEASURES OF FERTILITY AND MEAN AT MARRIAGE

The measure of fertility worked out were based on the F-series tables of 1991 Census pertaining to Tamil Nadu and the district is given below.

ESTIMATES OF FERTILITY INDICATORS, 1981 AND 1991

State / District	Year	CBR	TFR	TMFR	GFR	GMFR
Tamil Nadu	1981	32.0	3.9	5.5	123	169
	1991	26.4	3.1	4.8	99	136
Nagapattinam	1981	30.3	3.7	5.2	115	158
	1991	25.9	3.0	4.8	95	133

Source: Occational paper No.1. Of 1997 RGI

*Data pertains to undivided Thanjavur district

The values of CBR, TFR, TMFR, GFR and GMFR are presented separately for Tamil Nadu and Nagapattinam District (Thanjavur) in the above table. These values can be compared for 1981 and 1991 Censuses. The table shows that in Nagapattinam District (Thanjavur), all the above-mentioned rates have declined. Similar trend is observed in Tamil Nadu State also. On comparing the district level data with the State level data in the above table, it is observed that all the above-mentioned rates at the district level are lower than those at the State level except TMFR in 1991.

Different fertility measures indicate that mostly all the fertility levels in the district are lower compared to the state average during 1991. This is duly supported by the higher age at marriage of females in the district. compared to the state as is evident from the above table.

One the most useful indices that can be derived from the question on number of children born alive in the average number of children ever born per ever married women by age - group.

IMPORTANT INDICES OF FERTILITY - 1991

Fertility Indices	Nagapattinam *			Tamil Nadu		
	Total	Rural	Urban	Total	Rural	Urban
Number of children ever born per ever married women in age group 45 – 49	3.4	3.4	3.6	3.4	3.4	3.6
Child - women ratio (0-4 years)	347	360	305	348	369	311
Child - women ratio (5-9 years)	428	437	398	447	462	418

Since the most of the women in the age group 45-49 years complete their reproduction, the average number of children ever born per ever-married women in the age - group 45 - 49 years is termed as an index of completed level of fertility. Ever married include widows, divorced and separated women.

In the above table, average number of children born per ever-married women in the age group 45 - 49 in 1991 has been presented for total, rural and urban areas for the Nagapattinam District and Tamil Nadu state. It is observed from the above table that the number of children ever born per ever married woman in rural and urban areas of the Nagapattinam District (Thanjavur) is almost same.

Child - women ratio, a relative measure, is calculated to know the fertility performance of women. It is seen from the above table that child - women ratio (0-4 years) in rural areas are higher than urban areas and child - women ratio (5-9 years) higher in urban areas of Nagapattinam district and lower in urban areas as a whole in Tamil Nadu.

ANNEXURE IV

MIGRATION

Migration is a third component of population change, the other two being fertility and mortality. A person is considered as a migrant by place of birth if the place in which he is enumerated during the Census is other than the place of his birth. Similarly a person is considered as a migrant by place of last residence if the place in which he is enumerated during the Census is other than his place of immediate last residence.

INTERNAL AND INTERNATIONAL MIGRATION

The migrational movements are of three types; (i) Migration within the state itself with its components: (a) Migration within the district of enumeration (intra district migration) and (b) Migration from one district of State to another district of State (inter-district migration), (ii) Migration from one State to another State of the country (interstate migration) and (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration.

REASONS OF MIGRATION

As in 1991 Census, the reasons for migration were elicited in 2001 Census also. The reasons for migration were broadly categorized as (i) Employment / work, (ii) Business,(iii) Education, (iv) Marriage ,(v) Moved after birth, (vi) Moved with household and (vii) Any other reason. Reasons for migration have been elicited only with reference to movement from place of last residence.

IMPACT OF MIGRATION

Growth of population of a particular place depends upon natural increase due to excess of births over deaths and migration. Knowledge of trends in migration helps in future planning of a region.
