SRI THIYAGARAJA SWAMY TEMPLE, THIRUVARUR

The Sri Thiyagaraja Swamy temple at Thiruvarur is one of the ancient temples of India. The Nayanmars who lived during the 7th Century have composed 330 songs in praise of Lord Thiyagarajar. These songs are collectively called "Thevaram and Thiruvasagam".

Sprawling over an extent of 20 acres of land, this temple of Lord Thiyagaraja has nine gigantic towers (Gopurams) with unique architecture with magnificant vimanams and 13 large mandapams including a thousand-pillar mandapam.

Foreword

The District Census Handbook (DCHB) published by Census Organisation since 1951 census, is one of the important publications in the context of planning and development at grossroots level. The publication, which is brought out for each district, contains several demographic and socio-economic characteristics village-wise and town-wise of the district alongwith the status of availability of civic amenities, infrastructural facilities, etc.

The scope of the DCHB was initially confined to a few Census Tables and Primary Census Abstract (PCA) of each village and town within the district. Thereafter, at successive censuses, its scope and coverage has been enlarged. The DCHB published at the 1961 census provided a descriptive account of the district, administrative statistics, census tables and a village and town directory including PCA. The 1971 census-DCHB series was in three parts: Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. The 1981 census DCHB was in two parts: Part-A contained village and town directory and Part-B the PCA of village and town including the SCs and STs PCA up to tahsil/ town levels. New features alongwith restructuring of the formats of village and town directory were added into it. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent village, the distance in broad ranges from the nearest place having such an amenity, was given. Information on new items such as adult literacy centres, primary health sub-centres and community health workers in the village were provided so as to meet the requirements of some of the Revised Minimum Needs Programme. Information on approach to the village was provided for the first time in the Village Directory so as to give the details on number of inaccessible villages in each district. In the Town Directory, a statement (VII) on slums was introduced to provide the details on civic and other amenities in the notified slums of Class I and Class II towns.

The 1991 census DCHB, by and large, followed the pattern of presentation of 1981 census, except the format of PCA was restructured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 census. In addition, sex-wise population in 0-6 age group was included in the PCA for the first time with a view to enable the data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 census. One of the important innovations in the 1991 census was the Community Development Block (CD block) level presentation of village directory and PCA data instead of the traditional tahsil/taluk/PS level presentation. It was expected that the presentation of village directory and PCA data at CD block level will help the planners in formulation of micro level development plans, CD block being lowest administrative unit.

The present series of 2001 census DCHBs have been made more informative and exhaustive in terms of coverage and content. The Village Directory has been enlarged in scope by including a number of other facilities like banking, recreational and cultural facilities, newspapers and magazines and 'most important commodity' manufactured in village. Income and expenditure of gram panchayat, wherever possible, has been provided. Apart from these, more details on distance(s) at which basic amenities are available (if not available in the village), are given. This includes educational facilities (namely primary and middle schools and college), medical facilities (viz. Allopathic Hospital, Maternity & Child Welfare Centre and Primary Health Centre),

drinking water, post & telegraph (post office and phone), communication, bank, credit societies and recreational facilities. In Town Directory, the statement on Slums has been modified and its coverage enlarged by including details on all slums instead of 'notified slums'. The information is given in case of all statutory towns irrespective of their class, against only Class I and Class II towns in the 1981 and 1991 censuses. The basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. Two other significant additions in the publication are inclusion of 'motif' highlighting significant characteristic of the district and analytical notes as annexures. The analytical notes on (i) fertility and mortality and (ii) various measures of fertility and mean age at marriage are prepared based on 1991 Census. Whereas, in the notes relating to (i) percentage distribution of migrants by place of birth/place of last residence, (ii) main religions, (iii) marital status of population, (iv) age, sex and education and (v) distribution of spectrum of mother tongue, nature and extent of changes occurred in the district in its basic socio-demographic features during the decade 1991-2001 are analysed. The eight digits permanent location code number (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

The village and town level amenity data have been collected, compiled and computerised in prescribed record structure under the supervision of Dr. C. Chandramouli, Director of Census Operations, Tamil Nadu. Thereafter, efforts have been made to ensure comparability of the information with that of 1991 census data and the information brought out by the respective State Governments in their annual reports and statistical handbooks for various years after 1991. The task of planning, designing and coordination of this publication was carried out by Shri R.G. Mitra, Deputy Registrar General (C&T) and Dr. I.C. Agrawal, Assistant Registrar General of Social Studies Division. Dr. R.P.Singh, Deputy Registrar General (Map) provided the technical guidance in the preparation of maps. Whereas, Shri Anil Kumar Arora, Deputy Director of Data Processing Division who worked under the overall supervision of Shri Himakar, Addl. Director (EDP) helped in preparation of record structure for computerisation of village and town directory data and the programme for the generation of Village Directory and Town Directory statements including analytical inset tables. The draft DCHB manuscripts received from the Census Directorates have been scrutinised in the Social Studies Division under the guidance of Shri S.L. Jain, Deputy Director and Shri R.K. Mehta, Assistant Director. I am thankful to all of them and others who have contributed to make this publication possible.

Preface

Publication of the District Census Handbooks (DCHBs) was initiated after the 1951 census and is continuing since then with innovations/modifications after each decennial census. This is the most valuable district level publication brought out by the census organization on behalf of each State Government/Union Territory administration. It *inter-alia* provides data/information on some of the basic demographic and socio-economic characteristics and on the availability of certain important civic amenities/facilities in each village and town of the respective districts.

The District Census Handbook has two segments: Part A and Part B. Part A primarily deals with village and Town Directory and Part B contains Primary Census Abstract of each village and town of the District. The 1991 Census data presentation both in Part A and Part B of this book was the transition from traditional presentation at Taluk level to CD Block level and this pattern continued in 2001 census as well.

For the first time in 2001 census, the District Census Handbooks are being made available in electronic format.

The District Census Handbook is the joint collaboration of the Census Directorate and the Government of Tamil Nadu. On behalf of the Government of Tamil Nadu, this Directorate has prepared the manuscript of this book.

The District Census Handbooks of 2001 have some additional information which is based on the 2001 census as compared to the previous censuses like capturing of information on participation of women in economic activities, netting all the children in age-group 0-14 as also elderly people of age 60 years and above. The data about the number of handicapped persons including partial disability has also been collected in 2001 census for the whole of India. The most important methodological innovation introduced in 2001 census relate to carving out separate slum enumeration blocks.

The data being presented in this publication have been collected and compiled by Shri M.R.V. Krishna Rao, Deputy Director of Census Operations, Tamil Nadu with the assistance of S/Shri S.K. Srivastav, N. Sukumar Nandagopal and A. Achchhu Ali, Assistant Directors. For the preparation of manuscript of this book, I received wholehearted co-operation from all the Heads of Departments, Heads of offices of the District / Taluk / Corporation / Municipal / Town and Rural Administration and a number of dedicated and experienced Census staff of this office. I am grateful to all of them for their valuable contribution in the accomplishment of this task of national importance. I must place on record the co-operation extended to me by the press media and electronic media to make the census taking a great success in the state.

I am deeply grateful to Shri J.K. Banthia, IAS the Registrar General and Census Commissioner, India, New Delhi for the valuable guidance and advice at every step till the finalisation of this handbook. I also express my thanks to Dr. I.C. Agrawal, Assistant Registrar General (Social Studies Division) and Shri S.L. Jain, Deputy Director, ORGI, New Delhi for preparing the set of instructions for the compilation of the Village and Town Directory and other inset tables etc. being inserted in this District Census Handbook.

In particular, it has to be mentioned that the write up portion was taken up by Shri M.R.V.Krishna Rao, Deputy Director and finalised by Dr. D. Venkatesan, Deputy Director with the assistance of other members of the staff whose names have been mentioned in the "Acknowledgements".

ANALYTICAL NOTE

Analytical Note

(i) History and Scope of the District Census Handbook

The compilation of District Census Handbook is an innovation of the 1951 Census. District is considered as the most important unit for presentation of Census data. Census Statistics are also compiled for individual villages and towns, as they constitute the basic units of human habitation. Besides this, some other useful information pertaining to the land and the people has also been included in it to make it a self-contained book of reference for the District. It was, however, not altogether a new idea, since census data for smaller units were published in earlier censuses also in one form or the other. For the first time in 1891 District wise list of villages were published giving the population of each village. At the 1911 Census, data of villages were published in the form of village directory. Such village directories were again compiled in the shape of District Census Statistics at the 1921 Census. Finally, District Census Handbooks emerged as regular decennial publication since 1951 Census. The demand for the basic data for the smallest administrative unit was greatly felt in the post-independence era. The ushering in an era of planning and development in the wake of launching of Five-year plans after attaining independence, urgent need for detailed data at village level was felt. Thus, when the proposal to bring out District Census Handbook was put before the State Government, they readily agreed for the compilation and printing of District Census Handbooks through their respective Directors of Census Operations, under the authority of local government concerned. The general appreciation and utility of this handbook encouraged the Census Organisation to increase the scope of publication.

The tradition thus built up has been continued in the present series of District Census Handbooks. In the 1971 Census, it had been decided to bring out these hand books in three parts viz; Parts A, B and C. In respect of Tamil Nadu, Parts A and B of this publication had been printed in one volume and part C as a separate volume. During 1981 Census, it had been decided to print it in two parts viz. Parts A and B separately. Part A of this handbook consists of village and Town Directory and part B gives data on Primary Census Abstract (PCA). In 1991 Census also, the same pattern was adopted publishing Parts A and B in a single /double volumes as per the requirement and determining the size of the publication. However, in this census some of the non-census data included information on girl schools, social forestry areas etc. whereas items like staple food and information on newspapers etc. have been omitted.

In the present Census, the District Census Handbook is being brought out in a single volume which contain the village and town directory as also the Primary Census Abstract and it should certainly quench the thirst of the planners involved in micro level planning. Similarly, additional data revealing civic and other amenities in Class I town has been presented especially in respect of slum dewellers. Scholars and planners alike should benefit from the data on amenities.

(ii) Brief History of the District

According to the known history dating back to Sangam age, this district was under the rule of Cholas, Pandiyas and Cheras. Until 13th century the Chola dynasty ruled this land having their headquarters at Thanjavur. The famous kings among them were Karikalan, Kochengan, Rajendra I and Rajendra II. Karikalan has been immortalised as the king who has constructed the bund for the river cauvery, all the way from Poompuhar (Cauvery Poompattinam) to Srirangam upstream. It was built as far back as 1600 years ago or even more. Cholas had a reputable record during their epoch making rule in the field of art, architecture, literature, drama, music and dancing. They are highly memorable for their rich cultural and religious fervour.

Pandiyas were in power only for a short period. They were succeeded by Muslim rulers and subsequently by Nayak rulers during the 14th and 15th centuries. During the later half of the 17th century the Marathas came to power. The supremacy of the

English was later established. The administration of Thanjavur was given over to English fully under the treaty of 1799. Until the trifurcation of this district, it was under the Thanjavur district administration.

Most of the ancient Tamil rulers had their headquarters at Thanjavur, Woraiyur and Madurai. It is apt to mention here about the mythological stories of the following rulers who were remarkable for their justice. King Manuneethi Cholan had sentenced his only son to death for killing a calf by driving his chariot over the calf. Eventhough it was an accident and a case of an animal, the ruler had maintained his justice, by killing the prince by the same chariot. Another legend was about the Emperor Cibi Chakravarthy who had given his flesh to save a dove from a vulture. The significance of this is that both the rulers had their headquarters at Thiruvarur. Another significance is that Thiruvarur is the birth place of the carnatic music trinities Sri Thiyagarajar, Sri Syama Sastri and Sri Muthusamy Dikshithar.

The people of Thiruvarur district are noted for their religious and social harmony. The Hindus, Christians and Muslims do live together with a sense of mutual respect and without any discrimination.

(iii) Administrative Set up

The district consists of 2 Revenue divisions, 7 taluks, 10 CD blocks and 549 revenue villages. The tables below gives the details of divisions, taluks and number of villages in the district.

Name of the Revenue Division	Name of the Taluk	Number of villages

The present Thiruvarur district was created as separate district on 1.1.97 as per G.O.M.S. No. 681/ Revenue Department, dated 25.7.1996 from the composite Thanjavur district.

The district constitute with seven Assembly constituencies, viz., Nannilam, Thiruthuraipoondi, Thiruvarur, Mannargudi, Vedaranyam, Orathanadu and Valangaiman. Thiruvarur district has no separate Parliamentary Constituency. However, the district falls in three Parliamentary Constituencies of other districts namely Nagapattinam, Thanjavur and Mayiladuthurai.

(iv) Physical Features

Location and size

The district lies between $10^0.20'$ and $11^0.07'$ north latitute and $79^0.15'$ and $79^0.45'$ east longitude. The district is surrounded by Thanjavur district on the west, Nagapattinam and Thanjavur districts on the north and Nagapattinam district on the east.

Physiography

This district stands unique from time immemorial for its agricultural activities and is rightly called as "the Granary of South India". The name originally attributed to the composite Thanjavur district. Lying in the delta region of the famous river Cauvery, this peninsular delta district is rich in green paddy fields, tall coconut grooves, and other verdant vegetation.

The river cauvery popularly called as "Mother Cauvery" makes this land fertile with her tributaries. There is no hill or hillock in this district.

Drainage

The district has one of the best irrigation systems in the state and ranks foremost in the area irrigated. The river Cauvery and its tributaries are the primary and very dependable source of irrigation. The paddy cultivation of this district is fully depending upon the release of water from the Mettur Reservoir. Full supply of water in the river and in the channels from the middle of June and upto end of September are fairly required for the cultivation of paddy. The delta water supply will be reduced by the beginning of October and further reduced from the middle of October provided Northeast Monsoon sets in time.

The names of some main tributaries of Cauvery running in this district are:

1. Coleroon
2. Mulliyaru
3. Addaparu
4. Harichandra
5. Odampokkai
6. Valapparu
7. Mudikondan
8. Thirumalairajan
9. Vanjar
10. Veeracholanaru
11. Vikkaramanaru

Climate

The climate experienced in the district may be described as tropical monsoon type. There are four seasons; i) South West monsoon (June to September), ii) North East monsoon (October to December), iii) Winter (January to February) and iv) Summer (March to May). According to the temperature recorded at the observatory, the actual mean maximum temperature during the year 1998-99 was 21.9°C and the mean minimum was 15.9°C. December, January and February are the months in the year with a pleasant climate full of warm days and cool nights. From March onwards the climate rather becomes hot and humid and the mercury records an upward trend reaching its peak by the close of May or June. Summer rains hardly affect the temperature. The Northeast monsoon in October does bring some relief. The rainfall is erratic and ill distributed. It varies from year to year. In this district the rainy season is during October-November. The rainfall during the South West monsoon is much lower than the rainfall during the north east monsoon. A comprehensive statement showing the month wise rainfall in mm in Thiruvarur district during the monsoon periods of 1998-99 is given below.

South West Monsoon june- Sep 1999		North East Monsoon Oct-Dec 1999		Winter Season Jan-Feb 2000		Hot Weather Mar-May 2000

Flora and Fauna

As grown in other coastal belts of the state, the trees and plants like Mango, Coconut and Tamarind are found abundantly everywhere in Thiruvarur district. Jack fruit trees are found in Mannargudi taluk. Neem, Portha Figs and Banyan continue to be the popular avenue trees. Bamboos are common in the delta area. There is however no forest areas of any commercial value.

Wild animals of any kind are completely absent in this district due to the lack of hills. However, jackals, foxes and ordinary gray monkeys can be commonly found in the entire district. Snakes like Cobra, Krait, Russels Viper and Carpet Snake etc. exist in large numbers. Birds like Crow, Kite, Vulture, Owl, Sparrow, Cuckoo, Duck, Quail, Partridge etc., are also exist in the district.

Udayamarthandapuram bird's sanctuary is situated in Thiruthuraipoondi taluk spreading over an area of 111 acres. Nearly 50 varieties of birds used to visit this sanctuary from various places of the Country in large numbers during September-February. Similarly Muthupettai lagoon situated in Thiruthuraipoondi taluk is being visited by some 25 varieties of birds from different Countries every year during October-March.

Forest

The forest division comprises of natural forests in altered patches, some of which are of ecological value as there are compact plantations raised on the banks of rivers and canals over the entire district. Forest department has retained the plantation raised in reserved forests as avenue teak plantation has been handed over to Public works department for

maintenance and the compact teak plantation. The area under reserved forests is 2452 hectares, which is 1.2% of the geographical area. The forest area is mostly mangrove type and can be further classified into Littoral Forest, Tidal Swamp Forest, Southern Tropical Thorn Forest, Southern Carnatic Umbrella Throne Forest and Tropical dry evergreen forest.

Littoral and Tidal swamp forests comprise 70% of the total forest area in this district. The most commonly found trees in these forests are teak-sisoo, Siscobebal teak acacia, bamboo, coconut etc. The ecological role of these forests is very essential to prevent soil erosion and to strengthen the banks of rivers and canals.

Minerals and Mining

The major portion of Thiruvarur district is covered by Cauvery alluvium and reported to have potential for mineral wealth. Oil and Natural Gas Commission has carried out intensive exploration and deep drilling and has struck traces of oil. Further detailed exploration using the most modern methods of geophysical surveys aided by the latest computer technology and data analysis has been taken up with a view to assess the potential of petroleum in the Cauvery basin.

Soil

The soil of the district can be classified into three categories, such as alluvial, regal and arenaccous. The soil of the delta region is entirely alluvial but varies greatly in quality. The best of the alluvial is found along the four sides of the district. A portion of worst land in the delta is found in Thiruthuraipoondi and Muthupettai blocks.

Thiruvarur district is irrigated by the river Cauvery with its wide network of branches under Vennar division. This entire area of vast flat alluvial plain of with paddy fields interspersed with rich groves of Mango, Coconut and other trees. The soil of the district can be classified as alluvial of good quality. A small portion of land in the delta is found in Thiruthuraipoondi taluk where the soil is saline and not fit for cultivation.

Land and Land Use Pattern

The total geographical area of the district during the year 1998-99 was 228,463 hectares. The following statement shows the break-up of total geographical area by land use in the district.

	Area in Hectare	Percentage
RURAL		
Forest	13,137	5.8
Irrigated	139,623	61.1
Unirrigated	12,481	5.5
Culturable waste	9,114	4.0
Area Not available for Cultivation	44,068	19.3
Rural Area Total	218,423	95.6
Urban Area	10,040	4.4
Total	228,463	100.0

As per the above table, out of 228,463 hectares of land only 139,623 hectares was irrigated which counts to 61.11%. Land used as forest was 5.75% whereas area not available for cultivation, unirrigated, culturable waste counts to 19.29%, 5.46% and 3.99% respectively.

Land Holdings

Most of the lands were under the control of big landlords in the pre-independence days. After independence and introduction of land ceiling act and other acts protecting the interest of tenants, the size of the holdings have been minimized. More than 80% of lands were with small farmers and the average size of the land holding is 0-90 hectare. According to the agricultural census of Thiruvarur district, the size and the land holdings of the district has been detailed below.

Serial number	Size of Holding (Hec.)	No. of Holdings	Extent in Hec.
1	Below 0.5	82,809	22,011.5

The district is known for paddy cultivation with its natural resources like rainfall, climate, texture and fertility of the soil. The majority of the farmers happen to be small and marginal. The district is known for labour population, which entirely depends upon agriculture.

Agriculture

Thiruvarur district has occupied a predominant place in agricultural sector due to its alluvial soil blessed by "Mother Cauvery" and her numerous branches, which serve as main source of irrigation.

Source: Assistant Director of Statistics, Thiruvarur.

The above table shows the area under main crops during the year 1998-99. Agriculture forms the mainstay of 70% workers who are inhibiting in the district. The net area sown was 150,653 hectares. The area sown more than once was 45,559 hectares and the gross cropped area was 196,212. The total area both under food and non-food crops covered 188,018 hectares and 8,194 hectares respectively.

Crop Pattern and Production

The main crop of the district is paddy. Besides, Sugarcane, Groundnut, Black gram, Green gram; Coconut and Cotton are also gram.

The following statement shows the area, yield rate and production of principal crops in Thiruvarur district during 1998-99.

Serial number	Crop	Area (in Hec.)	Yield rate (in Kg./Hec.)	Production (in tonnes)

Normally, paddy is raised in the entire district in three crops. The first crop is known as kuruvai, it is a short-term crop with a duration of 100 to 105 days and it is raised between June/July to October/ November. The crop cultivated after harvesting kuruvai is called "Thaladi", which has duration of 120 to 125 days, and it is raised between October to February/March. Samba the long-term crop is raised as single crop with duration of 135 to 145 days from August to January.

The salient features of some popular varieties cultivated in this district are tabulated as under.

Variety	Duration (days)	Season	Yield M.T / Hec.
IR50	105	Kuruvai	5.0
IR64	115	Kuruvai	6.0
CO43	150-155	Samba	5.0

Horticulture

While comparing the past years, no considerable increase in the area of horticulture and vegetables in this district. The farmers are reluctant to raise these crops, as the climatic conditions are not congenial to these crops.

Irrigation

The chief sources of irrigation are rivers, tube wells, wells and a few rain fed tanks. These tanks and wells are situated in the upland regions. Cauvery and Coleroon are the most important rivers in the district. Strictly speaking agriculture in the district is dependent on the river Cauvery as most of the irrigated area in the district derive water from Cauvery and its numerous branches. Canals cover about 99% of the net area irrigated and these canals are by the river Cauvery.

During the last decade, the district suffered a heavy damage to crops for want of timely and sufficient supply of water from Cauvery. Actual area irrigated by different sources of irrigation in Thiruvarur district during 1998-99 is as follows.

Serial number	Source	Area (in Hecs)
1	Government Canals	160,685
2	Tanks	-
3	Flow irrigation	-
4	Lift irrigation	-
5	Wells	-
6	Tube wells	5,199
7	Other sources	11,422
8	Total Net area irrigated	145,176
9	Area irrigated more than once	21,448
10	Total cropped area irrigated	166,624

The gross area irrigated to total cropped area is 61% and the net area irrigated to net area sown is 85% during the year 1998-99.

Cauvery and its tributaries irrigate rather more than half of the district. The tube well irrigation is mostly supplementary to the major irrigation. Area irrigated exclusively under major irrigation source is very meager more or less nil.

The following statement shows the breakup of the total irrigated area (by all sources) by crops during the year 1998-99 in Thiruvarur district.

Animal Husbandary

Next to agriculture rearing of cattle is the subsidiary occupation for the rural farmers in this district. The position of livestock in Thiruvarur has improved but not appreciable. Animal Husbandry however could not keep pace with the development works undertaken in the field of latest agricultural techniques and so the district cannot boast of any special breed of cattle. Indigenous cattle still continue to be of poor quality. The unfortunate position is generally attributed to the absence of pasturelands and to scarcity of fodder crops in the district.

Cattle development has taken place through setting up of an intensive cattle development project with clinician center, veterinary dispensaries, mobile veterinary units, sub centers in the district. Frozen semen bank is being established in each veterinary hospital with which cross breed and Murrah are produced. Poultry extension work is not so encouraging in the district. A minimum number of poultries are maintained in some part of the district. Special camps have been conducted in imparting training in dairy and sheep husbandry now and then in the district by the Animal Husbandry department.

The 16th Livestock Census undertaken in the year and the following statements showing the number of Livestock and poultry as per the statistics collected during the census.

Serial number	Livestock and Poultry	Population
1	Cows	257,820
2	Buffaloes	71,191
3	Sheep	14,202
4	Goats	281,890
5	Poultry	534,637
6	Pigs	3,420

Fisheries

In Thiruvarur district rivers, irrigation tanks and ponds are the important sources of inland fishing. The inland fish catch during the year 1998-99 was about 5,120 tons and marine fish catching was 12,430 tons. Out of total fishermen population in this district 9,810 persons were directly engaged in fish catching and 4,250 were engaged in fish trading.

Industry

Agriculture is the main occupation in the district. The district lags behind in industrial development. But, there are certain industrial establishments, which slowly pave way for urbanization and industrialization in the district. Small-scale industries and traditional crafts are very limited in the district. In the year 1998-99, there were 77 factories functioning in this district. The estimated employment in these factories was 2,066 persons.

There is very limited number of khadi and village industries in the district. Cottage industries and Handicrafts like Handloom silk and cotton saris, which are renowned and cherished in some part of the district.

Though Handloom industry occupies an important place in the economy in Thiruvarur district, it is not flourished. Nearly 1,110 looms were in the district, of which more than half numbers were not functioning. All the looms were producing only silk sarees. The well-known pure silk sarees of Ammaiyappan are manufactured with decorative lace borders and squares in the body. Certain names of the important industries in the district are listed below.

1. T.N.C.S.C. Modern Rice Mill, Thiruvarur
2. Arooran Sugar Mills Ltd., Kollumangudi
3. Pamani Fertilizers Ltd., Pamani, Mannargudi
4. T.N.C.S.C. Modern Rice Mill, Sundarakottai Mannargudi

Trade and Commerce

There were 8 regulated markets in Thiruvarur district. Paddy is the major trading item in the district.

Fair Price Shops

There were 565 full-time and 51 part-time co–operative shops. Of this, 4 shops were run by fisheries women. There is no fair price shop run by TNSSC.

Commercial Banks

There were 51 commercial banks in rural areas and 30 banks at semi urban areas. The estimated deposit in these banks was Rs.529.60 lakhs.

Transport and Communication

State Highways department continued to maintain the major district roads and other district roads of 285 kms and 1456 kms long respectively. National highways to the length of 43 kms. is passing through the district. Almost all villages are connected with surfaced roads. The total number of railway stations in the districts are 22.

There were 26 police stations and 4 out-posts and also one women police station in the district. Besides, 10 fire service stations were also available in Thiruvarur district.

(v) Census Concepts

Building

A 'Building' is generally a single structure on the ground. Sometimes it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, workshops, worksheds, Schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that building which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence etc.

Usually a structure will have four walls and a roof. But in some areas the very nature of construction of houses is such that there may not be any wall. Such is the case of conical structures where entrance is also provided but they may not have any walls. Therefore, such of the conical structures are also treated as separate buildings.

Permanent houses

Houses, the walls and roof of which are made of permanent materials. The material of walls can be any one from the following, namely, galvanized iron sheets or other metal sheets, asbestos sheets, burnt bricks, stones or concrete. Roof may be made of from any one of the following materials, namely, tiles, slate, galvanized iron sheets, metal sheets, asbestos sheets, bricks, stones or concrete.

*S*emi-permanent houses

Houses in which either the wall or the roof is made of permanent material and the other is made of temporary material.

Temporary houses

Houses in which both walls and roof are made of materials, which have to be replaced frequently. Walls may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, plastic, polythene, mud, unburnt bricks or wood. Roof may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, wood, mud, plastic or polythene.

Dwelling Room

A room is treated as a dwelling room if it has walls with a doorway and a roof and should be wide and long enough for a person to sleep in, i.e. it should have a length of not less than 2 meters and a breadth of at least 1.5 meters and a height of 2 meters. A dwelling room would include living room, bedroom, dining room, drawing room, study room, servant's room and other habitable rooms. Kitchen, bathroom, latrine, store room, passageway and verandah which are not normally usable for living are not considered as dwelling rooms. A room, used for multipurpose such as sleeping, sitting, dining, storing, cooking, etc., is regarded as a dwelling room. In a situation where a census house is used as a shop or office., etc., and the household also stays in it then the room is not considered as a dwelling room. But if a garage or servant quarter is used by a servant and if she/ he also lives in it as a separate household then this has been considered as a dwelling room available to the servant's household. Tent or conical shaped hut if used for living by any household is also considered as dwelling room.

A dwelling room, which is shared by more than one household, has not been counted for any of them. If two households have a dwelling room each but in addition also share a common dwelling room, then the common room has not been counted for either of the households.

Census House

A 'census house' is a building or part of a building used or recognised as a separate unit because of having a separate main entrance from the road or common courtyard or staircase, etc. It may be occupied or vacant. It may be used for residential or non- residential purpose or both.

In certain peculiar situations, the manner in which buildings and census houses were identified for numbering in the field by the enumerators is described hereunder:

Sometimes a series of different buildings are found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably, the entire hostel / hotel building was treated as one census house. but if such

built at different times and owned by different persons. In such cases, though the whole structure with all the adjoining units apparently appears to be one building, each portion was treated as a separate building and its constituent units as separate census houses.

On the other hand, one may come across cases, particularly in large cities of multi-storeyed ownership flats. In these cases while the structure looks like one building, different persons own the flats. In case of such multi-storeyed structures, having a number of flats owned by different persons, the entire structure was treated as one building and each flat as a separate census house.

If within a large enclosed area, there are separate buildings owned by different persons then each such building is treated as a separate building. There can be a situation where within an enclosed compound there are separate buildings owned by an undertaking or company or even government that are actually in occupation of different persons. For example, Indian Oil Corporation colony where the buildings are owned by the Corporation but these are in occupation of their employees. Each such building was treated as a separate building. But if in any one of these buildings there were flats in occupation of different households, each such flat was reckoned as a separate census house.

Sometimes it becomes difficult to apply the definition of census house strictly in certain cases. For example, in an urban area, if a flat has five rooms, each room having direct entrance from the common staircase or courtyard. By definition, this has to be treated as five census houses. If all these five rooms are occupied by a single household it was not realistic to treat them as five census houses. In such a case, 'singleness' of use of these rooms along with the main house should be considered and the entire flat was treated as one census house. On the other hand, if two independent households occupy these five rooms, the first household living in 3 rooms and the second household occupying 2 rooms, then considering the use, the first three rooms together were treated as one census house and the remaining rooms as another census house. But if each room was occupied by an independent household, then each such room was treated as a separate census house.

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably; the entire hostel/hotel building was treated as one census house., but if such hostels/ hotels have out-houses or other structures used for different purposes or the same purpose, then each such structure attached to the main hostel/hotel was treated as a separate census house.

In some parts of the country, in rural areas, the pattern of habitation is such that a group of huts, located in a compound, whether enclosed or unenclosed, is occupied by one household. While the main residence may be located in one hut, other huts may be used for sleeping, as a kitchen, bath room, baithak, etc. Though each of the huts was a separates structure, they form a single housing unit and therefore, have to be treated collectively as one building and one census house. If some of the huts are used by one household and the others by a second household as residence, then the two groups of huts were treated as separate census houses. However, if there were also other huts in the compound used for other purposes and not as part of the household's residence such as, cattle shed, workshed, etc., these were treated as separate census houses.

On the other hand, in urban areas, where more than one structure within an enclosed or open compound (premises) belonging to the same person, e.g., the main house, the servant's quarter, the garage, etc., only one building number was given for this group and each of the constituent a separate census house number.

Only cases where a structure with roof and pillars has come up was treated as a building.

Village

The basic unit for rural areas is the revenue village, which has definite surveyed boundaries. The revenue village may comprise of one or more hamlets but the entire village is treated as one unit for presentation of data. In unsurveyed areas, like villages within forest areas, each habitation area with locally recognized boundaries is treated as one village.

Rural-Urban area

The data in tables on Houses, Household Amenities and Assets are presented separately for rural and urban areas. The unit of classification in this regard is 'town' for urban areas and 'village' for rural areas. In the Census of India 2001, the definition of urban area

adopted is as follows:

a) All places with a municipality, corporation, cantonment board or notified town area committee, etc.

b) A place satisfying the following three criteria simultaneously:

   i) A minimum population of 5,000;

   ii) at least 75 per cent of male working population engaged in non-agricultural pursuits; and

   iii) a density of population of at least 400 per sq. km.(1,000 per sq. mile)

For identification of places which would qualify to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population engaged in non-agricultural activity were considered. To work out the proportion of male working population referred to above against b) (ii), the data relating to main workers were taken into account.

Apart from these, the outgrowths (OGs) of cities and towns have also been treated as urban under 'Urban Agglomerations'. Examples of out-growths are railway colonies, university campuses, port areas, military camps, etc., that may have come up near a statutory town or city but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the demographic criteria laid down at (b) above to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the towns as a continuous urban spread. Thus, the town level data, wherever presented, also includes the data for outgrowths of such towns.

City

Towns with population of 100,000 and above are called cities.

Urban Agglomeration

An Urban Agglomeration is a continuous urban spread constituting a town and its adjoining urban outgrowths (OGs) or two or more physically contiguous towns together and any adjoining urban outgrowths of such towns. In some cases, railway colonies, university campuses, port areas, etc., may come up near a city or statutory town outside its statutory limits but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the town as a continuous urban spread.

For the purpose of delineation of Urban Agglomerations during Census of India 2001, following criteria are taken as pre-requisites:

(a) The core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town; and

(b) The total population of all the constituents (i.e., towns and outgrowths) of an Urban Agglomeration should not be less than 20,000 (as per the 1991 Census).

With these two basic criteria having been met, the following are the possible different situations in which Urban Agglomerations would be constituted:

i) a city or town with one or more contiguous outgrowths;

ii) two or more adjoining towns with their outgrowths; and

iii) a city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

Household

A 'household' is usually a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household.Each such person was to be treated as a separate household. The important link in finding out whether it was a household or not was a common kitchen. There may be one member households, two member households or multi-member households.

Institutional Household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. To make the definition more clearly perceptible to the enumerators at the Census 2001, it was specifically mentioned that this category or households would cover only those households where a group of unrelated persons live in an institution and share a common kitchen.

Houseless household

Households who do not live in buildings or census houses but live in the open on roadside, pavements, in hume pipes, under flyovers and staircases, or in the open in places of worship, mandaps, railway platforms, etc., are treated as Houseless Households.

Scheduled Castes and Scheduled Tribes

Article 341 of the Constitution provides that the President may, with respect to any State or Union territory, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of the Constitution be deemed to be Scheduled Castes in relation to that State or Union territory. Article 342 similarly provides for specification of tribes or tribal communities or parts of or groups within tribes or tribal communities which are to be deemed for the purposes of the Constitution to be Scheduled Tribes in relation to the various States and Union territories. In pursuance of these provisions, the list of Scheduled Castes and/or Scheduled Tribes are notified for each State and Union territory and are valid only within the jurisdiction of that State or Union territory and not outside. In September 1956, by an amendment, the Presidential Order of 1950 and in all subsequent Presidential Orders relating to Scheduled Castes, the Hindu and the Sikh religions were placed on the same footing with regard to the specification of Scheduled Castes. Later on, as per the amendment made in the Constitution (Scheduled Castes) Order 1990, the Hindu, the Sikh and the Buddhist were placed on the same footing with regard to the recognition of the Scheduled Castes.

Language and Mother tongue

As per the census concept, each language is a group of mother tongues. The census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf mutes, the language usually spoken by the mother is considered as mother tongue. It is not necessary that the language spoken as mother tongue should have a script. The mother tongues returned by the respondents in census are classified and grouped under appropriate languages according to their linguistic characteristics.

Literate

A person aged 7 years and above who can both read and write with understanding in any language is taken as literate. A person who can only read but cannot write is not literate. It is not necessary that to be considered as literate, a person should have received any formal education or passed any minimum educational standard. Literacy could also have been achieved through adult literacy classes or through any non-formal educational system. People who are blind and can read in Braille are treated as literates.

Literacy rate

Literacy rate of the population is defined as the percentage of literates in the age-group seven years and above. For different age-groups the percentage of literates in that age-group gives the literacy rate.

Educational level

The highest level of education a person has completed.

Work

Work is defined as participation in any economically productive activity with or without compensation, wages or profit. Such participation may be physical and/or mental in nature. Work involves not only actual work but also includes effective supervision and direction of work. It even includes part time help or unpaid work on farm, family enterprise or in any other economic activity. All persons engaged in 'work' as defined above are workers. Persons who are engaged in cultivation or milk production even solely for domestic consumption are also treated as workers.

Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

Main worker

A person who has worked for major part of the reference period (i.e. six months or more during the last one year preceding the date of enumeration) in any economically productive activity is termed as 'Main worker'.

Marginal worker

A person who worked for less than six months of the reference period (i.e. in the last one year preceding the date of enumeration) in any economic activity is termed as 'Marginal worker'.

Non-worker

A person who has not worked at all in any economically productive activity during the reference period (i.e. last one year preceding the date of enumeration) is termed as 'Non worker'.

Cultivator

For purposes of the Census, a person is classified as cultivator if he or she is engaged in cultivation on land owned or held from government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation.

A person, who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation in exchange of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or a combination of both (agricultural labourers) is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or a

combination of both (agricultural labourers) is not treated as cultivator.

Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, ground-nuts, tapioca, etc., and pulses, raw jute and kindred fiber crop, cotton, cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops – tea, coffee, rubber, coconut and betel nuts (areca).

Agricultural labourer

A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She/he has no risk in the cultivation, but merely works on another person's land for wages. An agricultural labourer has no right of lease or contract on land on which she/he works.

Household industry worker

Household industry is defined as an industry conducted by the head of the household herself/himself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act and should be engaged in manufacturing, processing, servicing and repairs of goods.

It does not include professions such as a pleader, Doctor, Musician, Dancer, Waterman, Astrologer, Dhobi, Barber, etc. or merely trade or business, even if such professions, trade or services are run at home by members of the household.

Other worker

A person, who has been engaged in some economic activity during the reference period but not as a cultivator or agricultural labourer or in Household Industry, is termed as a 'Other Worker (OW)'. The type of workers that come under this category of 'OW' include all government servants, municipal employees, teachers, factory workers, plantation workers, those engaged in trade, commerce, business, transport, banking, mining, construction, political or social work, priests, entertainment artists, etc. In effect, all those workers other than cultivators or agricultural labourers or household industry workers, are 'Other Workers'.

Work participation rate

Percentage of workers (main + marginal) to total population.

Population density

Population density is the number of persons inhabited per square kilometer of the area.

Age

Age is measured in terms of the completed number of years.

Sex Ratio

Number of females per 1000 males in a population.

(vi) Non-Census Concepts

Improved drinking water

If the household had access to drinking water supplied from a tap, hand pump, tube well or well (protected or covered) situated within or outside the premises, it is considered as having access to improved drinking water.

It may be mentioned that such uniform definition may not be valid across all States.

System of sewerage

Generally, a sewerage system would mean a network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those

carrying both sewage and storm water are called combined sewers. However, in some towns, which are not provided with such underground sewerage system, it is served by open surface drain, box drain, silk pattern drain, etc., in these towns.

Type of latrine and Method of disposal of night soil

There are three prevalent systems of disposal of human wastes, viz. :

(i) underground sewerage,

(ii) sanitary water flush latrines with individual disposal systems, like septic tank, leaching cess pool and collecting well, and

(iii) dry type of latrines with manual scavenging.

the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cistern (or hand flushing). Through this sewer the fecal matter is transported without the need for scavenging. This system generally exists in cities and big towns.

Where the street sewer does not exist, these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Here the liquid wastes from the water closet is disposed of locally in leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil, which renders the harmful liquid bacterially innocuous by the slow process of filtration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleaned at periodic intervals by a suitable device. The dry type of latrines are of service type latrines from where human excreta is removed by scavengers from house to house, in most cases carrying it on their heads or shoulders or in baskets with handle or wheel barrows. These are then collected in bullock carts or trucks or tractors and trolleys for being carried to the dumping grounds.

Fertility

In demography, the word fertility is used in relation to the actual production of children or occurrence of births specially live births. Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating the number of births to a full or part of the population, such as number of married women or number of women of child-bearing age. The definitions of the terminology used in computing different fertility rates are mentioned below:

Crude birth rate (CBR)

Ratio of the number of live births in a year to the mid year population, normally expressed per 1,000 population.

$$\text{CBR} = \frac{\text{Number of live births during the year}}{\text{Mid–year Population}} \times 1{,}000$$

Crude death rate (CDR)

Ratio of the number of deaths in a year to the mid year population, normally expressed per 1,000 population.

$$\text{CDR} = \frac{\text{Number of deaths during the year}}{\text{Mid-year Population}} \times 1{,}000$$

Natural growth rate

Growth rate is obtained as the difference between crude birth rate and crude death rate in the absence of migration.

Age specific fertility rate (ASFR)

Number of live births in a year to female population in any specified age-group normally expressed per 1,000 women.

$$\text{ASFR} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1{,}000$$

Age specific marital fertility rate (ASMFR)

Number of live births in a year to married female population in any specified age-group normally expressed per 1,000 married women.

$$\text{ASMFR} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1{,}000$$

General fertility rate (GFR)

Number of live births per 1,000 women in the reproductive age-group (15-49) years in a given year.

$$\text{GFR} = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age-group (15-49) years}} \times 1{,}000$$

General marital fertility rate (GMFR)

Number of live births per 1,000 married women in reproductive age-group (15-49) years in a given year.

$$\text{GMFR} = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) years}} \times 1{,}000$$

Total fertility rate (TFR)

It is obtained as the total of the age specific fertility rates (number of children born per woman of the particular age) for the entire reproductive age span. It provides the average number of children that will be born to a woman under the fertility levels indicated by the age specific fertility rates assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TFR} = \frac{5 \times \text{å}^{45\text{-}49}\text{ASFR}_{15\text{-}19}}{1{,}000}$$

Total marital fertility rate (TMFR)

Average number of children that would be born to a married woman if she experiences the current fertility pattern throughout her reproductive span (15-49) years assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TMFR} = \frac{5 \times \text{å}^{45\text{-}49}\text{ASMFR}_{15\text{-}19}}{1{,}000}$$

Age-specific mortality rate (ASMR)

Number of deaths in a particular age and sex group per 1000 population of the same age-group.

$$\text{ASMR} = \frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of the same age-group}} \times 1{,}000$$

q1

Probability of dying between birth and age 1. This can be used as approximate value of Infant Mortality Rate (IMR) which gives the ratio of number of deaths in a year of children aged less than one year to the number of births in that year.

q2

Probability of dying between birth and age 2.

q5 :

Probability of dying between birth and age 5. This indicator is also known as Under Five Mortality Rate (U5MR).

Infant mortality rate (IMR)

Ratio of the number of infant deaths (deaths of children below one year) in a year to the number of live births in that year.

$$\text{IMR} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Infant mortality rate comprises of two parts, viz., Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz., Early neo-natal mortality rate and late neo-natal mortality rate. These are defined as:

Neo-natal mortality rate (NMR)

Number of infants dying within the first month of life (28 days or under) in a year per 1,000 live births of the same year.

$$NMR = \frac{\text{Number of infant deaths aged 28 days or under during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

i) Early neo- natal mortality rate

$$= \frac{\text{Number of infant deaths of less than 7 days during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

ii) Late neo-natal mortality rate

$$= \frac{\text{Number of infant deaths of 7 days to less than 29 days during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Post neo-natal mortality rate (PNMR)

$$= \frac{\text{Number of deaths of 29 days to less than One year during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Peri-natal mortality rate (PMR)

Number of still births plus deaths within 1st week of delivery per 1000 births in a year.

$$PMR = \frac{\text{Number of still births and infant deaths of less than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1{,}000$$

Still birth rate (SBR)

$$= \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1{,}000$$

Maternal mortality rate (MMR)

Number of deaths of women in the age-group 15-49 while pregnant or within 42 days of termination of pregnancy from any cause related to pregnancy and child birth per 1,00,000 live births in a given year.

$$MMR = \frac{\text{Number of maternal deaths to women in the age group 15-49}}{\text{Number of live birth}} \times 1{,}00{,}000$$

Eligible couple (Couples per 1,000 population)

Number of currently married females in the age-group 15-44 years per 1000 persons of all ages.

Child woman ratio (0-4)

1. Number of children in the age-group 0-4 years per 1000 women in the age-group 15-49 years.

Child woman ratio (5-9)

2. Number of children in the age-group 5-9 years per 1000 women in the age-group 15-49 years.

Migration, Internal and International migration, Impact of migration.

Migration

Migration is the third component of population change, the other two being mortality and fertility. A person is considered as a migrant by place of birth if the place in which he is enumerated during the Census is other than the place of his birth. Similarly

a person is considered as a migrant by place of last residence if the place in which he is enumerated during the Census is other than his place of immediate last residence. By capturing the last of the migrations in cases where persons have migrated more than once, this concept would give a better picture of current migration scenarios.

Internal And International Migration

The migrational movements are of three types (i) Migration within the state itself with its components (a) Migration within the district of enumeration (intra district migration) (b) Migration from one district of state to another district of state (interdistrict migration) (ii) Migration from one state to another state of the country interstate migration (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration.

Impact of Migration

As in 1991 and 2001 Census, like previous Censuses, had collected migration details for each individual by place of birth and last residence. Data on last residence along with details like duration of stay in the current residence and reason for migration provides useful insights for studying migration dynamics of population.

Civic status of urban units

Civic Status of a town/city is determined on the basis of Civic Administrative authority of the town e.g., Municipal Corporation/Corporation, Municipal Committee/Municipal council, Municipality etc.

Size class of UA / town

Size-class of UA / Town is based on the population. UAs / Towns with 100,000 and above population are classified as Class I UAs/Towns. These Class I UAs./ Towns are now further sub classified into seven sub classes namely M1 to M7 depending on the population size of UA/City/Town. These are :

M7 (5,000,000 and above);

M6 (2,000,000 to 4,999,999);

M5 (1,000,000-1,999,999);

M4 (500,000-999,999);

M3 (300,000-499,999);

M2 (200,000-299,999); and

M1 (100,000-199,999).

Towns with 50,000 to 99,999 population are classified as Class II towns, 20,000 to 49,999 population are Class III towns, population with 10,000-19,999 are Class IV towns, population with 5,000 and 9,999 are Class V towns and towns with less than 5,000 population are Class VI towns.

Slum area

The Slum Areas (Improvement and Clearance) Act, 1956, which was enacted by the Central Government defined slums as:

a) Areas where buildings are in any respect unfit for human habitation; or

b) are by reasons of dilapidation, overcrowding, fault arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light or sanitation facilities, or any combination of these factors, are detrimental to safety, health or morals.

Mega city

The concept of 'Mega city' is a recent phenomenon in the Urban Sociology and is defined in term of metropolitan city in the form of large size, problem of management of civic amenities and capacity to absorb the relatively high growth of population. Indian Census in 1991 treated the population size of 5 million and above as the cut off point to identify a place as the mega city. Whereas, for the purpose of inclusion in Centrally Sponsored Scheme for Infrastructure Development in Mega cities the Ministry of Urban Affairs and employment, Department of Urban Development adopted the criteria of 4 million and above population as per 1991 Census for Mega Cities. In 2001 Census, cities with 10 millions and above population have been treated as Mega cities.

(vii) CENSUS 2001 FINDINGS

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 2001 Census is the midnight of 28th February, 2001 i.e. the census provides a snapshot of the population of the country, as it existed at the midnight of 28th February, 2001. Actual enumeration was spread over a period of 20 days from 9th to 28th February, 2001 followed by revisional round up to 5th March, 2001 for up dating of the population figures with reference to the midnight of 28th February, 2001. Household schedule was canvassed by the enumerator and with a view to ensuring uniformity in approach in understanding the various concepts and in proper eliciting and recording of the information, the enumerators and supervisors were imparted both theoretical as well as practical training intensively in 3 rounds.

As a prelude to the actual census the urban and rural areas were identified and listed out in respect of each administrative unit. The Directorate of Census Operations had prepared the list of urban areas and simultaneously, a list of villages. These lists formed the basic frame for the organization of the census operations. Thereafter, geographical areas that could be conveniently covered by each enumerator were carefully carved out to constitute the enumerator's block(EB).

The second major step was the house listing operation, which was carried out in this District during April, 2000. Thereafter, in order to adhere to the prescribed workload norms the actual census enumerator's blocks were carefully demarcated on the basis of the house list population and the layout sketches and notional maps prepared for the houselisting operation. Houselisting operation was also utilized to collect wealth of information on items such as predominant material used for construction of houses, amenities available to the census households, number of living rooms etc.

Population in rural and urban areas

In 2001, the total population of Thiruvarur District was 1,169,474; rural with 932,231 and urban with 237,234. In 1991, these were 1,304,621, 1,102,784 and 201,837 respectively.

The following table shows the taluk level distribution of population in total, rural and urban areas of the Thiruvarur District. Mannargudi taluk has come out with highest population of 287,019 and lowest population recorded in Valangaiman taluk 94,474. Among the taluks, in rural population Mannargudi taluk stands first(225,541) followed by Kodavasal(170,224), Thiruthuraipoondi (158,868), Nannilam(108,001), Needamangalam (105,543), Valangaiman (83,193) and Thiruvarur (80,861) respectively.

Comparing the population of urban areas, Mannargudi taluk stands in the first position with (61,478) followed by Thiruvarur (56,341), Thiruthuraipoondi (40,288), Needamangalam (31,725), Kodavasal (19,232) and Nannilam (16,898). In urban population, Valangaiman has recorded the lowest with (11,281).

Size, Class and Status of Towns

There are 11 Statutory Towns (4 Municipalities and 7 Town Panchayats). There is no non-statutory town in this district. Among the statutory towns two Municipalities fall under Class II, 2 Municipalities fall under Class III, 4 Town Panchayats fall under Class IV and 3 Town Panchayats fall under Class V. There is no Census town.

Decadal growth of population

The percentage of decadal variation of the total population during 1991-2001 in the district has been negative (-10.4%). In urban areas the growth was recored 17.5%. In rural areas, the district reported a negative growth of -15.5% which may be due to the increase in urban areas.

7	Thiruthuraipoondi	1,036	1,026	1,074
	District Total:	**1,014**	**1,011**	**1,023**

This table indicates that the district sex ratio is 1,014 while the district rural sex ratio is 1,011 and the urban is 1,023. Among taluks Thiruthuraipoondi has the highest sex ratio followed by Needamangalam, Mannargudi and Valangaiman taluks. Thiruvarur has the lowest sex ratio. Thiruthuraipoondi ranks top in rural sex ratio followed by Mannargudi and Thiruvarur taluks. Rural sex ratio is least in Nannilam taluk. In urban sex ratio Needamangalam taluk ranks top followed by Thiruthuraipoondi, Valangaiman and Kodavasal taluks. Urban sex ratio is least in Thiruvarur taluk. Both the rural and urban sex ratio of the district are much above that of the state average of 992 and 987 respectively.

TABLE 7 : SEX RATIO BY CD BLOCKS, 2001

District Total:	**541**	**100.0**	**932,231**	**100.0**

Sex ratio (Rural) for the district: 1,011

Distribution of villages by various sex ratio ranges shows that 55.8% of the villages covering 60.7% of the population fall beyond the sex ratio range of 1,000 while 31.1% of the villages fall in the sex ratio of 950 - 999, 10.2% of villages in the range 900 - 949. Only 2.9% of the villages have sex ratio below 900.

TABLE 9 : SEX RATIO OF URBAN AGGLOMERATIONS / TOWNS, 2001

Serial number	Name of UA / Town	Urban status of town	Sex ratio

10	Thiruvarur (M)	M	970
11	Valangaiman (TP)	TP	1,031

Sex ratio (Urban) for the district: 1,023

Comparing the sex ratio in the various towns of the district, we find Kodavasal TP has the highest sex ratio of 1,035 closely followed by Muthupet TP, Thiruthuraipoondi M and Valangaiman TP all above the district urban sex ratio of 1,023. Koradacheri TP has the lowest sex ratio of 991 followed by Thiruvarur M and Nannilam TP.

Note: Percent of workers to total workers are given in brackets.

This table reflects the distribution of total work participation in the various taluks by four major categories as cultivators, agricultural labourers, household industry workers and other workers. Mannargudi taluk has the highest proportion of cultivators followed by Valangaiman, Thiruthuraipoondi and Nannilam taluks while it is lower in Thiruvarur followed by Kodavasal and Needamangalam taluks. Agricultural labourers are the highest in Valangaiman followed by Nannilam, Needamangalam and Kodavasal while it is the least in Thiruvarur followed by Mannargudi and Thiruthuraipoondi. The household industry work is high in Kodavasal followed by Valangaiman, Mannargudi and Thiruvarur while it is least in Nannilam followed by Thiruthuraipoondi and Needamangalam taluks. In other workers category, Thiruvarur tops the list followed by Thiruthuraipoondi, Mannargudi and Needamangalam while it is least in Valangaiman followed by Nannilam and Kodavasal taluks.

(x) Brief description places of religious, historical or archelogical importance in villages and places of tourist interest in the towns of Thiruvarur District.

The district is having many places of tourist interest and pilgrim centers, which attract the tourists and pilgrims from all parts of the country and abroad for its historical, architectural and ecological importance. Following are the important centers in this district.

Thiruvarur

Thiruvarur is situated at a distance of 24 kms from Nagapattinam and 55 kms from Thanjavur. It is well connected by road to the important tourist centers in Tamil Nadu and connected by train to Chennai, the state Headquarters. The nearest airport is Thiruchirapalli, which is 115 kms from here.

The Arulmigu Thiyagaraja Swamy temple at Thiruvarur is considered as one of the ancient temple in India. The Nayanmars (Saint servants of Saiva sector of Hindu religion) who lived during the 7th century A.D. sang about 330 songs of Thevaram and Thiruvasagam praising the Lord Thiyagarajar. Thiruvarur is considered as Mukthi Shethram.

Apart from the twelve Jothirlinga shethrams in India, five shrines are considered as very important and are called as the Pancha Bootha Shethrams or the place of five elements of nature namely water, air, fire, earth and sky.

They are

1. Water	-	Thiruvanaikaval
2. Air	-	Kalahasthi in Andhrapradesh
3. Fire	-	Thiruvannamalai
4. Earth	-	Kancheepuram
5. Sky	-	Chidambaram

Thiruvarur is the shethram for Mooladharam (Basis) for the five elements. Thiruvarur is one of the Sapthavidanga Shethrams and it is one of the sixty four Sakthi Sthalams.

Manuneethi Chola who ruled Chola Nadu having Thiruvarur as his capital was famous for his justice. He rendered justice to a cow by killing his only son under the wheels of his chariot who caused death to the calf of that cow by accident while travelling in the chariot. Emperor Sibi who gave his flesh for the sake of a dove, which sought refuge to him when an eagle chased the dove, also ruled from this capital.

Spanning and sprawling over an extent of 20 acres of land this temple of Lord Thiyagaraja has nine gigantic towers of architectural magnificence, 80 Vimanams, 13 large Mandapams including thousand pillar Mandapam which has beautiful paintings, 16 wells and more than hundred sannadhis.

This temple annexes a huge tank of 20 acres by name Kamalalayam.

The temple car is the largest of the temple cars in the state and is world famous. Every year car festival is celebrated in the Tamil month of Panguni (March/April) which attracts large number of pilgrims and tourists. This sacred temple car was highly sung in praise by many saints.

Thiruvarur is the birth place of carnatic music trinities, Shri Thiyagarayar, Sri Syama Sastri and Shri Muthuswamy Dikshidhar. They all sung in praise of the presiding daity of this temple.

The Tamil Nadu Tourism Development Corporation is running pleasure boating service in the Kamalalayam tank.

Udayamarthandapuram Birds Sactuary

Udayamarthandapuram is situated in Thiruthuraipoondi taluk of Thiruvarur district. It is 15 km from Thiruthuraipoondi and 46 kms from Thiruvarur. This bird's sanctuary is spread over an area of 111 acres. 50 varieties of birds are coming here from the various parts in large number during September to February.

Muthupettai – Lagoon

Muthupettai is situated in Thiruthuraipoondi taluk of Thiruvarur district. On Thiruthuraipoondi - Pattukottai road Muthupettai is 27 km from Thiruthuraipoondi. The beautiful lagoons are situated in 6,803.01 hectares. The lagoons are under the control of forest department. 25 varieties of birds from foreign countries are coming to Muthupettai lagoon every year during October to March.

Mannargudi

Mannargudi is situated in Thiruvarur district. It is 27 kms from Thiruvarur and 37 kms from Thanjavur. Arulmigu Rajagopalaswamy temple in Mannargudi was constructed before 1072 A.D. From the inscriptions it is learnt that the sanctum sanctorum was constructed by Kulothunga Chola I (1072 A.D. to 1122 A.D.). Later his followers extended the temple and Nayakka kings. During the Nayakkar's period the temple was well developed. Every Tamil month temple festivals are being celebrated in a grand manner. Large number of tourists and pilgrims are visiting Mannargudi. Mannargudi was called as Senbagaranyam, Vanavarapathy, Kulothunga chola Vinnagaram and Rajathi Raja Sathurvethimangalam in olden days. It was also called as Duvaraka of south.

Vaduvoor Birds' Sanctuary

Vaduvoor is situated in Needamangalam panchayat union. It is about 45 Kms from Thiruvarur and 18 Kms from Thanjavur. The Birds Sanctuary is easily accessible and it is a bird watchers Paradise. The sanctuary is situated in an extent of 128 hectares. Around 55 species of birds are visiting the sanctuary. The Kothandaraman temple situated in Vaduvoor is also attracting the large number of local tourists.

Koothanur

Koothanur is situated in Nannilam taluk of Thiruvarur district on Thiruvarur Mayiladuthurai Road. Koothanur is near by Poonthottam bus stop. It is 22 Kms from Mayiladuthurai and 20 Kms from Thiruvarur. Koothanur is the birth place of Tamil poet "Ottakoothar". The temple situated at Koothanur is dedicated to Goddess Saraswathi. Further this is the only temple dedicated to Goddess Saraswathi in Tamil Nadu.

Alangudi

Alangudi is the place of Guru, one of the Navagrahas. The temple was dedicated to Lord Guru Dakshinamoorthy. Alangudi is situated in Valangaiman taluk of Thiruvarur district. It is 29 Kms from Thiruvarur and 19 Kms from Kumbakonam. Large number of pilgrims are visiting this place. Convenient bus connections are available from Kumbakonam.

Senthamangalam

Another important temple Dakshina Kali is situated at Senthamangalam of Thiruvarur taluk.

(xi) Major characteristics of the district, contribution of the district in the form of any historical figure associated with the district.

The Tyagaraja Temple at Tiruvarur is one of the ancient heritage sites of India and is a representation of the religious, socio-cultural and historical contribution of the Tamil region for a period spanning over a millennium and a half. The ancient Sri Tyagaraja Temple at Tiruvarur is dedicated to the Somaskanda aspect of Shiva. The temple complex

has shrines dedicated to Vanmikanathar, Tyagarajar and the Kamalamba, and covers an area of over 20 acres. The Kamalalayam temple tank covers around 25 acres, is one of the largest in the country. The temple chariot is the largest of its kind in Tamil Nadu. Every year after the car festival, the Theppam festival is celebrated. The temple Kumbabishekam is performed every twelve years, most recently in 2001.

(xii) Scope of Village and Town Directory

The "Village Directory" is one of the traditional compilations of the Census. It gives the list of Revenue villages, their location numbers, their area, population, number of households, amenities such as educational, medical, drinking water, post and telegraph, commercial and co-operative banks, agricultural, non-agricultural and other credit societies, recreational and cultural facilities, communication, approach to village, nearest town with distance, power supply, availability of newspaper and magazines, most important commodity manufactured and land use of each village. PRIMARY CENSUS ABSTRACT

Brief note on Primary Census Abstract

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another.

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5,463 sub-districts, 5161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars; Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation**.** The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration. The Schedules for both the phases were scanned through high speed scanners in fifteen data centres across the country and hand-written data from the schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing. The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million schedules consisting of about 1028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain. This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rural areas and the ward level in the urban areas. Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use. The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and their senior officers were required to make detailed

presentations of data for their own state both in respect to the quality and the coverage and only after the full possible satisfaction of the TFQA, the population data was cleared.

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population. In the earlier censuses, the total Scheduled Castes and Scheduled Tribes population were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual. Two Special Task Forces, one on Religion and the other on Scheduled Castes/Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses.

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge. The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encountered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature. Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels.

The entire work relating to the data validation and scrutiny was completed by all the States/Union territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division.

Primary Census Abstract

The Primary Census Abstract which is yet another important publication of 2001 census gives basic information on Area, Total Households, Total Population, Scheduled Castes, Scheduled Tribes Population, Population in the age group 0-6, Literates, Main workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural laborers, (iii) Household Industry Workers, and (iv) Other Workers and also Non-workers. The characteristics of the Total Population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless population and are presented by sex and rural-urban residence. This data is presented at different levels, namely, India, States/ Union territories, Districts and Cities, Urban Agglomerations (Population 1,00,000 and above) in three different tables. In addition, the Appendix of said publication provides Houseless and Institutional Households and their population by residence and sex for 2001 for India, State and Union territory.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census Abstract. This practice was continued in 1991 also. In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and in its place, four-fold industrial classification of both 'main workers' and 'marginal workers' are included. In 1981 census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis of literacy data.

The data in the Primary Census Abstracts are presented at different levels, The District Primary Census Abstract is presented at District/ C D block/ UA/City/Town, Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented at District/C D block/ Town, Village Primary Census Abstract is presented villagewise for each C D block and Urban Primary Census Abstract at Town/Ward* level. The Primary Census Abstract data for each of these characteristics is presented by sex and rural-urban residence.

The District Primary Census Abstract has been presented in 59 columns, Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes has been presented in 52 columns, Village Primary Census Abstract and Urban Primary Census Abstract has been presented in 58 columns. The information on each village under a C D block are presented in the Village Primary Census Abstract and each of the wards under a town has been provided in the Urban Primary Census Abstract exist in the district. The Data was presented for villages C D block-wise for the first time in 1991 Census. This practice is continued in 2001 Census also.

The concepts and definitions used in the column heading are already explained under the sub heading 'Census concepts' in the Analytical note. The Total population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts is as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tahasils, P.Ss and by the local bodies in respect of towns are given in sq.kms. The area figures of the villages supplied by the Tahasildars in acres have been converted and shown in hectares. The area figures of the C D block is the total of the village areas coming under each C D block. The area figures for the district supplied by the Surveyor General of India have been adopted to maintain uniformity at the national level. The total area figures of all the Tahsils/C D blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of P.S./Tahsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tahsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different levels.

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on total population, Scheduled Castes population and Scheduled Tribes population for each town.

ANNEXURE II

FERTILITY AND MORTALITY MEASURES

FERTILITY LEVELS

In demography, the word fertility is used in relation to the actual production of children or "occurrence of births specially live birth". Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating number of births to size of some section of the population, such as number of married couples or number of women of child bearing age.

In other words, it is a major component of population growth. In 1991 Census, questions of fertility related to age at marriage, number of surviving children at present, number of children ever born alive and children born alive during the last one year were asked. The first three questions were asked to all ever-married women and the last question related to currently married women. These data were also gathered in 2001 census but they are not readily available.

SELECTED INDICATORS ON FEMALE NUPTIALITY, 1991

State / District	Total / Rural / Urban	Mean age at marriage of currently married women			Percentage of currently marriage women with age at marriage below 18		
		Total	Who married during		Total	Who married during	
			1981-86	1986-91		1981-86	1986-91
Tamil Nadu	T	19.1	19.3	19.7	31.6	28.2	24.5
	R	19.0	19.1	19.3	32.2	30.2	27.8
	U	19.3	19.7	20.3	30.4	24.4	18.6
Thiruvarur *	T	19.1	19.4	19.6	31.2	26.4	24.4
	R	19.1	19.3	19.4	31.1	26.9	25.6
	U	19.2	19.7	20.1	31.7	24.6	21.0

* No separate data for Thiruvarur was available. The data represents undivided Thanjavur district.

The above table presenting the female age at marriage relates to all women who are living with their husbands. Some of them might be recently married and some of them decades ago. In view of this the figures mentioned in the table should be regarded as indicating the situation for the population as a whole.

The above table reveals the female nuptiality level at 1991 census. Mean age at marriage of currently married women has been stated as 19.3 years during 1981 - 86 and increased to 19.7 years at 1986 - 1996 in Tamil Nadu as a whole. Similarly both at rural and urban areas also, age at marriage has been increased during 1986 - 1991. Likewise, Thanjavur district also has the same trend. Marriage below the age 18 is lesser during 1986 - 1991 than that of 1981 - 86. Same decline occured at district level also.

Different fertility measures indicate that mostly all the fertility levels in the district are lower compared to the state average during 1991. This is duly supported by the higher age at marriage of females in the district, compared to the state as is evident from the above table.

CHILD MORTALITY LEVELS

The estimates presented here have been obtained using the data on the number of children ever born and number of children surviving to ever-married women. Information on questions on children ever born and children surviving canvassed for all ever-married women have been tabulated by age of the mother. From this, estimates of child mortality (qi) have been worked out using Brass technique, where q (i) is the probability of a newborn child dying before age (i) = 1, 2, 3 and 5.

ESTIMATES OF CHILD MORTALITY INDICATORS BY SEX

State / District		Tamil Nadu		Thiruvarur	
Year		1991	1981	1991	1981
Persons	q(1)	54	104	40	102
	q(2)	58	103	50	95
	q(3)	61	114	52	100
	q(5)	67	132	54	122
Males	q(1)	55	114	38	114
	q(2)	57	110	52	104
	q(3)	61	116	53	105
	q(5)	64	134	57	128
Females	q(1)	51	93	41	89
	q(2)	60	96	46	86
	q(3)	62	111	47	95
	q(5)	70	131	52	115

It is observed from the above table that the child mortality estimates in the district and the state has decreased in 1991 when compared to those in 1981. Child-women ratio, a relative measures is calculted to know the fertility performance of women.

ANNEXURE III

VARIOUS MEASURES OF FERTILITY AND MEAN AGE AT MARRIAGE

The measures of fertility worked out are based on the F-series of 1991 census pertaining to Tamil Nadu and the undivided Thanjavur district are defined as below.

ESTIMATES OF FERTILITY INDICATORS (1981 AND 1991)

State / District	Year	CBR	TFR	TMFR	GFR	GMFR
Tamil Nadu	1981	32.0	3.9	5.5	123	169
	1991	26.4	3.1	4.8	99	136
Thiruvarur	1981	30.3	3.7	5.2	115	158
	1991	25.9	3.0	4.8	95	133

The values of different fertility rates mentioned under each column proves that, it has declined in 1991 census than that of 1981 census both at district and state level.

The values of CBR, TFR, TMFR, GFR and GMFR are presented separately for Tamil Nadu and Thiruvarur District in the above table. These values can be compared for 1981 and 1991 Censuses. The table shows that in Thiruvarur District, all the above-mentioned rates from 1981 to 1991 have declined. Similar trend is observed at State level also. On comparing the district level data with the State level data in the above table, it is observed that all the above mentioned rates at the district level are lower than those at the State level except TMFR in 1991.

IMPORTANT INDICES OF FERTILITY - 1991

Fertility Indices	Thiruvarur			Tamil Nadu		
	Total	Rural	Urban	Total	Rural	Urban
Number of children ever born per ever married women in age group 45 - 49	3.4	3.4	3.6	3.4	3.4	3.6
Child - women ratio (0-4 years)	347	360	305	348	369	311
Child - women ratio (5-9 years)	428	437	398	447	462	418

One of the most useful indices that can be derived from the question on number of children born alive in the average number of children ever born alive per ever married women by age-group. Since most of the women complete their reproduction by the age-group 45-49, the average number of children ever born per ever- married women in the age-group 45-49 is termed as an index of completed level of fertility. Ever married women include widows, divorced and separated.

This table states the indices of fertility i.e., number of children ever born per ever married women in the age group 45 - 49 which is almost of the same level for Thiruvarur as well as Tamil Nadu. Similarly, child-women ratio between 0-4 age and 5-9 age also remains at the same level for Thiruvarur and Tamil Nadu.

Note: The informations furnished from Annexures II to VIII related to the undivided Thanjavur district as it existed during 1991 census which includes the present Thanjavur, Nagapattinam and Thiruvarur districts (as per 2001 census). So the data presentedin these Annexures does not relate to the existing Thiruvarur district alone.

ANNEXURE IV

MIGRATION

Migration is the third component of population change, the other two being mortality and fertility. A person is considered as a migrant by place of birth if the place in which he is enumerated during the Census is other than the place of his birth. Similarly, a person is considered as a migrant by place of last residence if the place in which he is enumerated during the Census is other than his place of immediate last residence.

INTERNAL AND INTERNATIONAL MIGRATION

The migrational movements are of three types; (i) Migration within the state itself with its components: (a) Migration within the district of enumeration (intra district migration), (b) Migration from one district of state to another district of state (interdistrict migration), (ii) Migration from one state to another state of the country (interstate migration) and (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration.

REASONS FOR MIGRATION

As in 1991 Census, the reasons for migration were also elicited in 2001 Census. The reasons for migration were broadly categorized as (i) employment / work, (ii) Business , (iii) Education , (iv) Marriage, (v) Moved after birth, (vi) Moved with household and (vii) Any other reason. Reasons for migration has been elicited only with reference to movement from place of last residence.

IMPACT OF MIGRATION

Growth of population of a particular place depends upon natural increase due to excess of births over deaths and migration. Knowledge of trends in migration helps in future planning of a region.

ANNEXURE VI

MARITAL STATUS OF POPULATION

Marital status is defined as under:

Never married: A person who has never been married at any time before

Married / Currently married: A person whose marriage is subsisting with spouse living. It may be the first or subsequent marriage of either of the persons. Persons who are recognized by custom or society as married and persons in stable de facto union are also considered as married.

Widowed: A person whose spouse is dead and who has not been married again.

Divorced or Separated: A person who has been separated from the spouse and is living apart with no apparent intention of living together again or who has been divorced either by decree of a law court or by accepted social religious custom but who has not been re - married.

SEX-WISE PERCENTAGE DISTRIBUTION OF MARITAL STATUS

Census Year	Sex	Never married	Married	Widowed	Divorced / Seperated	Unspecified
2001	M	51.8	45.9	2.1	0.2	0.0
	F	41.3	48.1	10.0	0.6	0.0
1991	M	54.4	43.1	2.3	0.1	0.0
	F	43.2	46.9	9.5	0.4	0.0

* Data pertains to undivided Thanjavur district.

Sex-wise percentage of marital status contains four broad categories as given in the table. Though never married is just 6% higher than the married class, it is more than half of the total population among males. Regarding females it is 41.3% and 48.1% respectively. Widower is more than the widows i.e. 10.0% and 2.1%.

ANNEXURE VII

AGE, SEX AND EDUCATION IN THE DISTRICT

LITERATE

A person aged 7 years and above who can both read and write with understanding in any language is to be taken as literate. A person, who can only read but cannot write, is not literate. The tables given below explain the literacy and education level for both 1991 and 2001 census in Tamil Nadu and Thiruvarur District (undivided Thanjavur district).

LITERACY RATES FOR AGE GROUP BY SEX IN THE DISTRICT

District	Census Year	Sex	Literacy rates for the age-group					
			7 years and above	10 years and above	15 years and above	10-14	15-59	60+
Thiruvarur	2001	M	85.5	85.6	84.1	96.7	86.5	66.1
		F	67.9	66.9	63.2	95.3	68.0	25.4

The above table gives further distribution of literates in different educational level in the district. The highest literates reported among primary but below middle level in 2001 census.

ANNEXURE VIII

DISTRIBUTION OF DIFFERENT MOTHER TONGUES RETURNED

MOTHER TONGUE

The definition of mother tongue used in 2001 census is same as in 1991 Census. "Mother Tongue is the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf means the language usually spoken by the mother should be recorded. As per the Census concept, each language is a group of mother tongues. The Census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. There are 18 languages included in the Eighth Schedule to the Constitution of India (Scheduled Languages).
