TIRUVANNAMALAI TEMPLE

The temple has the history of several hundreds years and built by several Kings during their period. The temple has been built by several Tamil kings such as Cholas and Pandiyas. This temple is one of the "**Panch Boodha Sthalams**" and it is "**Agni**" Sthalam. It has also the importance as "**Padal PetraSthalam**". That is the four famous 'Saiva Saints and Poets' such as Appar, Sundarar, Manichkavasakar and Thirugnana Sambandar made several poems on Lord Arunachaleswara.

This is one of the most holy places of Tamil Nadu for the Hindus where the presiding diety is Lord Shiva known as Arunachaleswara. Lord Shiva is in the form of Agni Linga which is one among the Panchalingas. ***Karthigai Depam*** in Tamil month of ***Karthigai*** is celebrated in this holy place where three to five lakhs devotees assemble to offer their worship to Lord Shiva.

Foreword

The District Census Handbook (DCHB) published by Census Organisation since 1951 census, is one of the important publications in the context of planning and development at grossroots level. The publication, which is brought out for each district, contains several demographic and socio-economic characteristics village-wise and town-wise of the district alongwith the status of availability of civic amenities, infrastructural facilities, etc.

The scope of the DCHB was initially confined to a few Census Tables and Primary Census Abstract (PCA) of each village and town within the district. Thereafter, at successive censuses, its scope and coverage has been enlarged. The DCHB published at the 1961 census provided a descriptive account of the district, administrative statistics, census tables and a village and town directory including PCA. The 1971 census-DCHB series was in three parts: Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. The 1981 census DCHB was in two parts: Part-A contained village and town directory and Part-B the PCA of village and town including the SCs and STs PCA up to tahsil/town levels. New features alongwith restructuring of the formats of village and town directory were added into it. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent village, the distance in broad ranges from the nearest place having such an amenity, was given. Information on new items such as adult literacy centres, primary health sub-centres and community health workers in the village were provided so as to meet the requirements of some of the Revised Minimum Needs Programme. Information on approach to the village was provided for the first time in the Village Directory so as to give the details on number of inaccessible villages in each district. In the Town Directory, a statement (VII) on slums was introduced to provide the details on civic and other amenities in the notified slums of Class I and Class II towns.

The 1991 census DCHB, by and large, followed the pattern of presentation of 1981 census, except the format of PCA was restructured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 census. In addition, sex-wise population in 0-6 age group was included in the PCA for the first time with a view to enable the data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 census. One of the important innovations in the 1991 census was the Community Development Block (CD block) level presentation of village directory and PCA data instead of the traditional tahsil/taluk/PS level presentation. It was expected that the presentation of village directory and PCA data at CD block level will help the planners in formulation of micro level development plans, CD block being lowest administrative unit.

The present series of 2001 census DCHBs have been made more informative and exhaustive in terms of coverage and content. The Village Directory has been enlarged in scope by including a number of other facilities like banking, recreational and cultural facilities, newspapers and magazines and 'most important commodity' manufactured in village. Income and expenditure of gram panchayat, wherever possible, has been provided. Apart from these, more details on distance(s) at which basic amenities are available (if not available in the village), are given. This includes educational facilities (namely primary and middle schools and college), medical facilities (viz. Allopathic Hospital, Maternity & Child Welfare Centre and Primary Health Centre), drinking water, post & telegraph (post office and phone), communication, bank, credit societies and recreational facilities. In Town Directory, the statement on Slums has been modified and its coverage enlarged by including details on all slums instead of 'notified slums'. The information is given in case of all statutory towns irrespective

of their class, against only Class I and Class II towns in the 1981 and 1991 censuses. The basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. Two other significant additions in the publication are inclusion of 'motif' highlighting significant characteristic of the district and analytical notes as annexures. The analytical notes on (i) fertility and mortality and (ii) various measures of fertility and mean age at marriage are prepared based on 1991 Census. Whereas, in the notes relating to (i) percentage distribution of migrants by place of birth/place of last residence, (ii) main religions, (iii) marital status of population, (iv) age, sex and education and (v) distribution of spectrum of mother tongue, nature and extent of changes occurred in the district in its basic socio-demographic features during the decade 1991-2001 are analysed. The eight digits permanent location code number (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

The village and town level amenity data have been collected, compiled and computerised in prescribed record structure under the supervision of Dr. C. Chandramouli, Director of Census Operations, Tamil Nadu. Thereafter, efforts have been made to ensure comparability of the information with that of 1991 census data and the information brought out by the respective State Governments in their annual reports and statistical handbooks for various years after 1991. The task of planning, designing and coordination of this publication was carried out by Shri R.G. Mitra, Deputy Registrar General (C&T) and Dr. I.C. Agrawal, Assistant Registrar General of Social Studies Division. Dr. R.P.Singh, Deputy Registrar General (Map) provided the technical guidance in the preparation of maps. Whereas, Shri Anil Kumar Arora, Deputy Director of Data Processing Division who worked under the overall supervision of Shri Himakar, Addl. Director (EDP) helped in preparation of record structure for computerisation of village and town directory data and the programme for the generation of Village Directory and Town Directory statements including analytical inset tables. The draft DCHB manuscripts received from the Census Directorates have been scrutinised in the Social Studies Division under the guidance of Shri S.L. Jain, Deputy Director and Shri R.K. Mehta, Assistant Director. I am thankful to all of them and others who have contributed to make this publication possible.

Preface

Publication of the District Census Handbooks (DCHBs) was initiated after the 1951 census and is continuing since then with innovations/modifications after each decennial census. This is the most valuable district level publication brought out by the census organization on behalf of each State Government/Union Territory administration. It *inter-alia* provides data/information on some of the basic demographic and socio-economic characteristics and on the availability of certain important civic amenities/facilities in each village and town of the respective districts.

The District Census Handbook has two segments: Part A and Part B. Part A primarily deals with village and Town Directory and Part B contains Primary Census Abstract of each village and town of the District. The 1991 Census data presentation both in Part A and Part B of this book was the transition from traditional presentation at Taluk level to CD Block level and this pattern continued in 2001 census as well.

For the first time in 2001 census, the District Census Handbooks are being made available in electronic format.

The District Census Handbook is the joint collaboration of the Census Directorate and the Government of Tamil Nadu. On behalf of the Government of Tamil Nadu, this Directorate has prepared the manuscript of this book.

The District Census Handbooks of 2001 have some additional information which is based on the 2001 census as compared to the previous censuses like capturing of information on participation of women in economic activities, netting all the children in age-group 0-14 as also elderly people of age 60 years and above. The data about the number of handicapped persons including partial disability has also been collected in 2001 census for the whole of India. The most important methodological innovation introduced in 2001 census relate to carving out separate slum enumeration blocks.

The data being presented in this publication have been collected and compiled by of Shri M.R.V. Krishna Rao, Deputy Director of Census Operations, Tamil Nadu with the assistance of S/Shri S.K. Srivastav and N. Sukumar Nandagopal and A. Achchhu Ali, Assistant Directors. For the preparation of manuscript of this book, I received wholehearted co-operation from all the Heads of Departments, Heads of offices of the District / Taluk / Corporation / Municipal / Town and Rural Administration and a number of dedicated and experienced Census staff of this office. I am grateful to all of them for their valuable contribution in the accomplishment of this task of national importance. I must place on record the co-operation extended to me by the press media and electronic media to make the census taking a great success in the state.

I am deeply grateful to Shri J.K. Banthia, IAS the Registrar General and Census Commissioner, India, New Delhi for the valuable guidance and advice at every step till the finalisation of this handbook. I also express my thanks to Dr. I.C. Agrawal, Assistant Registrar General (Social Studies Division) and Shri S.L. Jain, Deputy Director, ORGI, New Delhi for preparing the set of instructions for the compilation of the village and Town Directory and other inset tables etc. being inserted in this District Census Handbook.

In particular, it has to be mentioned that the write up portion was taken up by Shri M.R.V.Krishna Rao, Deputy Director and finalised by Dr.D. Venkatesan, Deputy Director with the assistance of other members of the staff whose names have been mentioned in the “Acknowledgements”.

ANALYTICAL NOTE

Analytical Note

(i) History and Scope of the District Census Handbook

The compilation of District Census Handbook is an innovation of the 1951 Census. District is considered as the most important unit for presentation of Census data. Census Statistics are also compiled for individual villages and towns, as they constitute the basic units of human habitation. Besides this, some other useful information pertaining to the land and the people has also been included in it to make it a self-contained book of reference for the District. It was, however, not altogether a new idea, since census data for smaller units were published in earlier censuses also in one form or the other. For the first time in 1891 District wise list of villages were published giving the population of each village. At the 1911 Census, data of villages were published in the form of village directory. Such village directories were again compiled in the shape of District Census Statistics at the 1921 Census. Finally, District Census Handbooks emerged as regular decennial publication since 1951 Census. The demand for the basic data for the smallest administrative unit was greatly felt in the post-independence era. The ushering in an era of planning and development in the wake of launching of Five-year plans after attaining independence, urgent need for detailed data at village level was felt. Thus, when the proposal to bring out District Census Handbook was put before the State Government, they readily agreed for the compilation and printing of District Census Handbooks through their respective Directors of Census Operations, under the authority of local government concerned. The general appreciation and utility of this handbook encouraged the Census Organisation to increase the scope of publication.

The tradition thus built up has been continued in the present series of District Census Handbooks. In the 1971 Census, it had been decided to bring out these hand books in three parts viz; Parts A, B and C. In respect of Tamil Nadu, Parts A and B of this publication had been printed in one volume and part C as a separate volume. During 1981 Census, it had been decided to print it in two parts viz. Parts A and B separately. Part A of this handbook consists of village and Town Directory and part B gives data on Primary Census Abstract (PCA). In 1991 Census also, the same pattern was adopted publishing Parts A and B in a single /double volumes as per the requirement and determining the size of the publication. However, in this census some of the non-census data included information on girl schools, social forestry areas etc. whereas items like staple food and information on newspapers etc. have been omitted.

In the present Census, this District Census Handbook is being brought out in two volumes which contain the village and town directory as also the Primary Census Abstract and it should certainly quench the thirst of the planners involved in micro level planning. Similarly, additional data revealing civic and other amenities in class I town has been presented especially in respect of slum dewellers. Scholars and planners alike should benefit from the data on amenities.

(ii) Brief History of the District

Tiruvannamalai – Sambuvarayar District as the present district was known then, was formed on 30.9.1989 by bifurcating erstwhile North Arcot District. Originally North Arcot was carved out of the Northern part of Subah of Arcot lying North of Palar river and hence the name. From 1.7.1997, the District has been named as Tiruvannamalai District. The region had experienced many thrilling fights between the local rulers on one side and the French and the English invaders on the other. Some of the places of historical importance include Wandiwash (Vandavasi) and Arni, where servile battles (big and small) were fought. Most of them were decisive of the “Panchalinga Sivasthalams” Tiruvannamalai, the capital of the district, represents “Agnilingam”, the other four namely ‘Bhoomilingam’ represented at Kancheepuram “Varunalingam” at Thiruvanaikkaval, “Vayulingam” at Tirukkalasthi (Sri Kalahasthi in Andhra Pradesh) and “Ahayalingam” at Chidambaram. “Arunachalam” in Sanskrit means unapproachable (Red) fire.

According to a myth the Lord of creation, Brahma, had the ego that he was the supreme God. This led to a dispute between Him and Lord Vishnu to ascertain their supremacy. At that time Lord Shiva appeared before them as a "Jothi" (Light) and put them to a lost saying that one among them who could reach his foot or crest first would be the real supreme God, Accordingly, Lord Brahma took the form of a swan to reach the crest whereas Lord Vishnu took the form of Varaha (boar) to reach his foot. Finally, both of them failed in their attempt. Because of this, the place is considered religious that the very thinking about this place Tiruvannamalai would help attaining Liberation (Mukthi). The event is remembered as "Karthigai Deepam" festival and every year lakhs of devotees visit this place at the time of the festival.

Arunachala, the God, in Tiruvannamalai holds more in its bosom. Skandapurana declares that there is no beverage superior to drinking than water, no gift better than "Anna Daana" no "Kshetra" better than Arunachala and no God better than Arunachaleshwara. By remembering this great name, all sins of a person will disappear and he will attain Salvation (Mukthi).

It is learnt from the past history of "Tamilagam" (Tamil Country) that brave Vanniya Kula Kshatriyas were very helpful to King Chola in order to prevent territorial encroachment. Apart from the above, they went to the extent of ruling the kingdon with justice and without any blemish to the rule. They were forerunner of women's emancipation. They planned for flawless quick, efficient and able administration. In tribute to their bravery and extraordinary contribution of their pioneer, Sambuvarayar, that part of the newly formed district has been named after him as Tiruvannamalai Sambuvarayar district, vide G.O.M.S.No.1112, dated 27.09.1989 by the notification of the Government of Tamil Nadu.

The region has a very interesting background. In the Sangam age, this region was part of Aruva Nadu. Later it became part of the Thondai Mandalam. In Thondai Mandalam, the Pallava rule began as early as 300 AD. Kancheepuram was the capital city of Pallavas. When the Pallvas were defeated at the Thiruoarambiam battle, the Chola hegemony began. In the intervening period, the Rashtrakuta King Krishna III defeated Paranthaka Chola in the Thakolam battle. Thus, in 968 AD, the Rashtrakutas started ruling the region followed by Cholas continued up to 1300 AD.

In the 15th century, the region came under the Vijayanagar Empire. It was during the Vijayanagar Empire that a Palace and a Fort were built at Vellore. After the down fall of Vijayanagar Empire, the Maratta rulers ruled this region. Later, this region came under the Nawabs of Arcot. During the rule of Nawab Arcot became the capital of their Kingdom. Later in the capital of their Kingdom. Later in the 18th century, several battles were fought in this region between the Arcot Nawab, Hyder Ali, the British and the French. However, finally the British won.

In 1749, Nawab Anwaruddin was defeated and killed at Ambur by his rival Chanda Sahib who was assisated by the French. Soon after the war on the Coromandal Coast, the English with Robert Clive as Chief, captured Arcot, the capital of new Nawab. The brilliant victory of Robert Clive is considered a memorable event in Anglo-Indian history and the war was later renewed and in 1757 Arcot fell to the French. The English General Sir Eyre Coott defeated the French General, fought at Wandiwash or Vandavasi in 1760 and subsequently lost to the French.

Hyder Ali, the Mysore ruler, invaded the Carnatic in 1767 and laid seize to Ambur, but later returned to Kaverippakkam. Again in 1780, Hyder Ali invaded the region pounding Vellore and neighbouring places and beseiged Arcot. He later abandoned the attempt given to know about the advancement of British Army under Sir Hectart Munro. However, he inflicted heavy lesses to a detachment under Colonel Baillie near Polur. Later he took Arcot and Ambur and beseiged Vellore and Vandavasi in another invasion. In a subsequent fight with English in Sholighur, Hyder Ali sustained heavy losses and the war finally ended in 1783.

In 1781, the Nawab had assigned the revenues of the carnatic to the East India Company and North Arcot came under their management. In 1801, the region witnessed full sovereignty. Though the local chieftains resisted the English rulers, later they were

subdued by 1805. Expecting for some disturbances in 1806 peace prevailed thereafter. The British rule lasted further for a century-and-a half till 1947 when India attained independence. The British introduced many socio-economic reforms in the 19th century and during the first half of the 20th century.

(iii) Administrative Setup

Tiruvannamalai District consists 2 Revenue Division, Cheyyar and Tiruvannamalai, and 6 Taluks. The District comprises 4 Municipalities, 10 Town Panchayats and 2 Census Towns. The total Number of Revenue Villages in the District is (1,046 inhabited Villages).

(iv) Physical Features

Location and Size

Vellore district forms the Northern boundary of the district. A part of Kancheepuram district and part of Villupuram district occupies the Southern boundary. A part of Dharmapuri district and a part of Vellore District occupy the Western boundaries.

The Tiruvannamalai district extend geographical area of 6,191 sq. km. The district lies between 11° 55' and 13° 15' of Northern latitude and 78° 20' and 79° 50' of Eastern latitude.

Physiography

The North-Western part of the region covers portions of Eastern Ghats and their spurs. The Jawadhu Hills are the highest mountains of the region. They cover the eastern part of Tiruppattur Taluk, the north western portion of Chengam taluk and the western part of Polur taluk with spurs running in to Vellore taluk up to 9 km. The general elevation of the Jawadu Hills is 2500 ft. with peaks rising up to 4200 ft, Karnatigan measured (3,123 ft) in Polur taluk. The hills in the Southern part of Chengam taluk constitute parts of Kalrayan Hill range in Villupuram District. There are also a large number of small hills in Polur and Chengam taluks. The general slope of the region is from West to East. The Hills in Tiruvannamalai and Pavala Malai at Polur taluk are famous for their spiritual sanctity.

Flora and Fauna

No distinct variety of flora is observed in this district. The hilly areas is of "dry" deciduous type. In the low land, the ordinary vegetation like Tamarind trees, Teak wood, Sandal wood, Ven teak, Casurina, Bamboo etc., are the important trees in the District. As regards fauna, although no special distinguishing variety is found in the District. Some wild animals are found in the mountainous tracts. Bisons are seen in small numbers in Jawadhu Hill ranges and tigers are occasionally seen. Leopards, Black bears, Hyena, Samburs, Spotted deer, Jungle Sheep, Barking deer, Antelopes, and Varieties of snakes including Cobras are spread over at different regions. Elephants were found near Chengam forests. However, Elephants

are not seen here in the recent times. Pea fowls and Jungle fowls live in small numbers.

Drainage

Palar, Cheyyar and Pennaiyar are the rivers running through this District. Palar raising near Nandidurg in Mysore enters Vellore district passing through Gudiyattam, Walajapet and Arakkonam taluks before entering into Cheyyar taluk of Tiruvannamalai District and there after enters into Kancheepuram district. The other important river is the Cheyyar river which originates from Jawadhu Hills. Flowing in a Southernly direction at first, it turns South-East near Chengam and after flowing over a distance of 13 km. It passes through Polur, Vandavasi and Cheyyar taluks, Pennaiyar and South Pennaiyar originate from Nandidurg of Karnataka. It passes through Dharmapuri district and enters the Southern part of Chengam taluk. After flowing through these parts it enters Villupuram district. It is a perennial river. At Sathanur, about 30 km.West of Tiruvannamalai, a dam has been constructed across this river which is a picnic spot in this district.

The Sathanur Reservoir also provides drinking water to Tiruvannamalai town, besides providing water for irrigation.

Climate

The climatic conditions of the region varied because of its physiography. The highest temperature recorded in the recent past was 112 degrees and the lowest was 54 degrees. The radiation of the heat from the rocky hill slopes and the blinding glare of the dry sandy bed of the Palar and discomfort caused by the rays was about 37.8 inches and the average number of rainy days was about 52. The rainy months are ordinarily from May to December. The rainfall of the region depends on the South West and the North-East monsoon. The North-East monsoon is some what stronger except in the Southern taluks of Cheyyar and Vandavasi.

Temperature and rainfall in the district are generally moderate. In Tiruvannamalai and Chengam, the climate is cool in winter and hot during summer. The District gets most of its rainfall during North-East monsoon. Usually cyclonic storms not uncommon which cause good rainfall, of course, not causing much damage.

In 1999-2000, Tiruvannamalai District received 1001mm of rainfall as compared to a normal of 1200 mm. The table below gives the actual and normal rainfall in the District during the South West and North East monsoons, winter and hot weather seasons in 1999-2000.

South West		North East		Winter Season		Hot Weather	
Jun-Sep		Oct-Dec 1999		Jan-Feb 2000		Mar-May 2000	
Actual	Normal	Actual	Actual	Normal	Normal	Actual	Normal
202	447.8	382.6	443.4	52.9	41.4	74.4	110.8

Forest

The area covered by forest in the district is about 137,671 hectares which is about a quarter of the area of the entire district. Thick forest areas of this District are found in Chengam and Polur taluks. The reserved forests in the taluks consists of hill forest, plain forests, scrub growth and river plantations. The hill forests contain sandalwood and bamboos. The forests of the region are of great value and good source of revenue to the Government. Apart from the above herbal plants, tamarind trees, teakwood, Ven teak and casurina are widely prevalent in these forests.

Minerals

No mineral is mined in this district. Quartz however, is available in little quantity in the regions bordering Villupuram district. Pirhotite is said to be available in Polur. Black and multi-colored marble stones are available in plenty in the regions of Chengam and Vandavasi. These were made use of by the Sambuvarayas in the past exhibitiing their architectural skills.

Soils

The soil is mostly red ferruginous variety both sandy and loamy with black clay. Black soil is mostly found in the neighbourhood of the rivers of Palar, Pennaiyar and Cheyyar. Red series of sand is found in all the taluks of the district but more predominantly in Tiruvannamalai and Vandavasi taluks.

Land and Land Use Pattern

The land in the district is utilised for cultitvating different types of agricultural crops. The following table explains the land use pattaern in the district during 1999 - 2000.

Classification of land use	Area in (H.a)	Percentage
Forest	137,671.3	23.0

Agriculture

Although Tiruvannamalai District cannot be equated with some of the agriculturally prominent district like Thanjavur, Tiruchirappalli and Villupuram, yet it is important in the field of agriculture. Cultivation is the mainstay of the people of the district. The district is dependent on seasonal rains for successful agricultural operations. Some of the taluks, in particular, which enjoy irrigation facilities like Tiruvannamalai, Cheyyar, Polur and Vandavasi are known for their substantial contribution to the agricultural production of the district. The following table explains the same:

Crop	Area (L.H.A)	Production (L.M.T)	Productivity (Kgs/HA)

Tanks and wells are the chief sources of irrrigation and there are enough water in them, when monsoons occur normally. Electicity is provided to all the villages in the district. In the last four decades, there has been a spurt in the installation of electrical pump-sets for irrigation and this has given a boost to agricultural techniques in the use of fertilizers, pesticides, improved seed varieties and modern agricultural implements etc., which resulted in increased agricultural production.

Horticultural Crops

Horticultural practice among the cultivators in the district is reported. There are fruit trees and vegetables grown largely in Tiruvannamalai District. The table below explain the area and production of different horticultural crops in 1999 - 2000.

	Area in Ha.	Production in MT
Banana	2,496	63,280
Mango	438	233
Chelli	1,008	794

Sericulture

The total area under mulberry cultivation as on 1-4-2000 was 137.30 hectares. The area under irrigation was 137.30 heactres. The total production of reeling cocoons was 0.535 mts.

Irrigation

Three major rivers contribute largely to irrigation in this district are Palar, Pennaiyar and Cheyyar across which dams have been constructed. Sathanur dam has been built across Pennaiyar during the first Five Year Plan. It is 770 metres long and 36.27 meters high with a storing capacity of 4600 M.ft. It irrigates about 162,266 hectares of land. It reserves water and supplies throughout the year for irrigation to Chengam and Thiruvannamali taluks and also for the Villupuram district. Palar Dam benefits Cheyyar taluk, whereas Cheyyar Dam irrigates Cheyyar and Vandavasi taluks.

Irrigation Source	Number / Length
Canals	144 / 119 kms.
Irrigation Wells	92,510
Tube Wells	342

Tanks	1,965

Apart from this, several hill streams feed numerous tanks and these sources are supplemented by a large number of wells. There are 2607 canals, 50217 tanks and 109093 wells used for irrigation in this district.

Animal Husbandry

Previously intensive cattle development projects in key villages were engaged in cattle development in limited areas of selected districts of the State. Now, the Department of Animal Husbandary is undertaking implementation of the World Bank assisted project through Live Stock Development Programmes from 1991-1992 under the intensive cattle development projects and key centres have been reorganized into 20 cattle breeding and fodder development units in the state, so that they can exclusively attend to cattle and fodder development work in all districts.

Thus, the Department has provided facilities exclusively for cattle/buffalo development and fodder development in all districts in the state.

As per the Livestock and Poultry Census as on 27.3.2000, details of live stock with regard to Tiruvannamalai District is provided below:

Sl. No	Live Stock	Population
1	Cows	-
2	Buffaloes	65,605
3	Sheep	383,464
4	Goats	280,945
5	Poultry	494,074
6	Pigs	29,824

The Animals Husbandry Centre for Tiruvannamalai District provides the following data on Veterinary facilities to the livestock population.

Sl.No.	Institutions	Number
1	Veterinary Hospitals	5
2	Veterinary Dispensaries	33
3	Clinic Centres	1
4	A.D.I.U.	Nil

Fisheries

The importance of fisheries in the district is restricted to inland waters. With the construction of reservoir at Sathanur in 1958, a new fish seed collection centre has been established. A good stock of fish seeds are stocked here. Fishery statistics reveals that inland fish catch is about 110.0 tonnes and the number of fishermen engaged was 62 persons in Sathanur Dam. Fishing by mechanized boats was 29 and trawellers was 9 and mechanised boats with plain boats was 2.

Industries

There are number of small scale industries in the district. The number of small scale industries in the district with persons employed in 1999 - 2000 are as given below:

Name of Industry	Number	Capital (Lakhs of Rupees)	Employment
Food products	985	492.5	3,940
Cotton Textiles	292	175.2	584
Wood products	307	153.5	1,228

Miscellaneous & Synthetic Textiles	372	186.0	1,116

There were 50,000 looms in and around Arni Town even in small villages situated within a radius of 25 Km. from this place. This industry has provided direct employment to about 30,000 weavers and indirect employment to about 50,000 persons, both men and women. Mulberry cultivation is having done in limited scale in Arni Taluk.

Arni silk sarees are famous to some extent. Costly sarees are produced only on a limited scale with specific reference to the requirement .

The Central State Farm at Melchengam is one of the units under State Farm Corporation of India. A Government of India undertaking established in October, 1971 with assistance of Tamil Nadu Government. This is located 45 km, west of

Tiruvannamalai. The main activity in the farm is production of quality seeds in addition to the breeder seed quality. Certified seeds are also produced in the category of oil seeds, pulses, Vegetable and cereals.

Stone carving is done in some parts of Polur taluk by the traditional workers. Horn and bone works are being done in some places of Cheyyar taluk. Mat-weaving is an important pursuit as cottage industry in many villages.Soap making, bee-keeping, hand made paper, Palm - gurmaking, handloom cotton and silk industry etc., have been developed to supplement the integrated Rural Development Project (IRDP) in the district.

Trade and Commerce

There are 16 regulated markets in this district. As agriculture is a manistay in the district, agricultural crops like paddy and other commercial crops are traded within the district as well as with other districts and States. Textile products are also traded in the district.

Transport

Tiruvannamalai District is not much connected with rail routes except for a metre ghauge route from Madurai to Katpadi passing through Tiruvannamalai. The railway stations covered on the route are 1. Tiruvannamalai, 2. Polur, 3. Kannamangalam and Arni Road covering a distance of 93 km.

The State Road Highways cover a distance of 203.90 km. of surfaced roads apart from major district roads covering 377.50 km. that is 2,607.96 km. have been covered by bituminous surface.

There are 61,756 two wheelers, 7,275 motor cars, 478 jeeps, 78 cabs, 26 vans and 6146 commercial vehicles used for other purposes plying in this district. There were 1979 driving licenses issued and 1514 renewals made up to February 2000.

There were 6,146 commercial vehicles and 7,1821 non-commercial vehicles registered in Tiruvannamalai District in 1999-2000. The following table gives the details.

Cattle Shandy of Tiruvannamalai

The well-known fact about the temple town of Tiruvannamalai district is that it hosts the annual "Karthigai Deepam" festival attracting three to five lakhs of devotees every year. But a little known fact is that spectacular week long annual cattle and horse shandy is also held in this town to coincide with the festival.

Beginning five days prior to Deepam festival and ending a day after that, the cattle and horse shandy attracts buyers and sellers from various parts of Tamil Nadu besides neighbouring states like Andhra Pradesh, Karnataka and the Union Territory of Pondicherry. According to long time residents of this place the large turn-over of people for this festival had been in the early part of this century influencing traders to buy

and sell cows, bulls and horses. The venue of this shandy is spread over a vast extent of land at the foot of Annamalai Hills presenting a lovely sight with the cows, bulls and horses grazing happily while their owners are busy haggling over the prices.

In during 1999-2000, nearly 25,000 pairs of cattle were brought to the shandy which attracted a lakh of traders. There were many leading businessmen having dairy farms who visited Tiruvannamalai exclusively to trade in this shandy. The speciality is that it attracts cows and bulls world over whose value even goes upto 50,000 if they are priced reasonably. The number of horses traded in the shandy has come down over the year owing to the decline in use of horse as a "means of transport" compared to the 25,000 pairs of cattle traded. in the shandy, only about 1000 horses were traded. Many horse-owners from Madanapalli in Andhra Pradesh to the shandy to sell their horses.

Apart from the above, there are about 26 different trading centres in the district where weekly shandies transact business regularly. Besides cattle, other products like food grains, cloth, cereals, pulses, etc., are also traded.

(v) Census Concepts

Building

A 'Building' is generally a single structure on the ground. Sometimes it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, workshops, worksheds, Schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that building which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence etc.

Usually a structure will have four walls and a roof. But in some areas the very nature of construction of houses is such that there may not be any wall. Such is the case of conical structures where entrance is also provided but they may not have any walls. Therefore, such of the conical structures are also treated as separate buildings.

Permanent houses

Houses, the walls and roof of which are made of permanent materials. The material of walls can be any one from the following, namely, galvanized iron sheets or other metal sheets, asbestos sheets, burnt bricks, stones or concrete. Roof may be made of from any one of the following materials, namely, tiles, slate, galvanized iron sheets, metal sheets, asbestos sheets, bricks, stones or concrete.

Semi-permanent houses

Houses in which either the wall or the roof is made of permanent material and the other is made of temporary material.

Temporary houses

Houses in which both walls and roof are made of materials, which have to be replaced frequently. Walls may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, plastic, polythene, mud, unburnt bricks or wood. Roof may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, wood, mud, plastic or polythene.

Dwelling Room

A room is treated as a dwelling room if it has walls with a doorway and a roof and should be wide and long enough for a person to sleep in, i.e. it should have a length of not less than 2 meters and a breadth of at least 1.5 meters and a height of 2 meters. A dwelling room would include living room, bedroom, dining room, drawing room, study room, servant's room and other habitable rooms. Kitchen, bathroom, latrine, store room, passageway and verandah which are not normally usable for living are not considered as dwelling rooms. A room, used for multipurpose such as sleeping, sitting, dining, storing, cooking, etc., is regarded as a dwelling room. In a situation where a census house is used as a shop or office., etc., and the household also stays in it then the room is not considered as a dwelling room. But if a garage or servant quarter is used by a servant and if she/ he also lives in it as a separate household then this has been considered as a dwelling room available to the servant's household. Tent or conical shaped hut if used for living by any household is also considered as dwelling room.

A dwelling room, which is shared by more than one household, has not been counted for any of them. If two households have a dwelling room each but in addition also share a common dwelling room, then the common room has not been counted for either of the households.

Census House

A 'census house' is a building or part of a building used or recognised as a separate unit because of having a separate main entrance from the road or common courtyard or staircase, etc. It may be occupied or vacant. It may be used for residential or non- residential purpose or both.

In certain peculiar situations, the manner in which buildings and census houses were identified for numbering in the field by the enumerators is described hereunder:

Sometimes a series of different buildings are found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably, the entire hostel / hotel building was treated as one census house. but if such

built at different times and owned by different persons. In such cases, though the whole structure with all the adjoining units apparently appears to be one building, each portion was treated as a separate building and its constituent units as separate census houses.

On the other hand, one may come across cases, particularly in large cities of multi-storeyed ownership flats. In these cases while the structure looks like one building, different persons own the flats. In case of such multi-storeyed structures, having a number of flats owned by different persons, the entire structure was treated as one building and each flat as a separate census house.

If within a large enclosed area, there are separate buildings owned by different persons then each such building is treated as a separate building. There can be a situation where within an enclosed compound there are separate buildings owned by an undertaking or company or even government that are actually in occupation of different persons. For example, Indian Oil Corporation colony where the buildings are owned by the Corporation but these are in occupation of their employees. Each such building was treated as a separate building. But if in any one of these buildings there were flats in occupation of different households, each such flat was reckoned as a separate census house.

Sometimes it becomes difficult to apply the definition of census house strictly in certain cases. For example, in an urban area, if a flat has five rooms, each room having direct entrance from the common staircase or courtyard. By definition, this has to be treated as five census houses. If all these five rooms are occupied by a single household it was not realistic to treat them as five census houses. In such a case, 'singleness' of use of these rooms along with the main house should be considered and the entire flat was treated as one census house. On the other hand, if two independent households occupy these five rooms, the first household living in 3 rooms and the second household occupying 2 rooms, then considering the use, the first three rooms together were treated as one census house and the remaining rooms as another census house. But if each room was occupied by an independent household, then each such room was treated as a separate census house.

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably; the entire hostel/hotel building was treated as one census house., but if such hostels/ hotels have out-houses or other structures used for different purposes or the same purpose, then each such structure attached to the main hostel/hotel was treated as a separate census house.

In some parts of the country, in rural areas, the pattern of habitation is such that a group of huts, located in a compound, whether enclosed or unenclosed, is occupied by one household. While the main residence may be located in one hut, other huts may be used for sleeping, as a kitchen, bath room, baithak, etc. Though each of the huts was a separates structure, they form a single housing unit and therefore, have to be treated collectively as one building and one census house. If some of the huts are used by one household and the others by a second household as residence, then the two groups of huts were treated as separate census houses. However, if there were also other huts in the compound used for other purposes and not as part of the household's residence such as, cattle shed, workshed, etc., these were treated as separate census houses.

On the other hand, in urban areas, where more than one structure within an enclosed or open compound (premises) belonging to the same person, e.g., the main house, the servant's quarter, the garage, etc., only one building number was given for this group and each of the constituent a separate census house number.

Only cases where a structure with roof and pillars has come up was treated as a building.

Village

The basic unit for rural areas is the revenue village, which has definite surveyed boundaries. The revenue village may comprise of one or more hamlets but the entire village is treated as one unit for presentation of data. In unsurveyed areas, like villages within forest areas, each habitation area with locally recognized boundaries is treated as one village.

Rural-Urban area

The data in tables on Houses, Household Amenities and Assets are presented separately for rural and urban

areas. The unit of classification in this regard is 'town' for urban areas and 'village' for rural areas. In the Census of India 2001, the definition of urban area adopted is as follows:

a) All places with a municipality, corporation, cantonment board or notified town area committee, etc.

b) A place satisfying the following three criteria simultaneously:

   i) A minimum population of 5,000;

   ii) at least 75 per cent of male working population engaged in non-agricultural pursuits; and

   iii) a density of population of at least 400 per sq. km.(1,000 per sq. mile)

For identification of places which would qualify to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population engaged in non-agricultural activity were considered. To work out the proportion of male working population referred to above against b) (ii), the data relating to main workers were taken into account.

Apart from these, the outgrowths (OGs) of cities and towns have also been treated as urban under 'Urban Agglomerations'. Examples of out-growths are railway colonies, university campuses, port areas, military camps, etc., that may have come up near a statutory town or city but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the demographic criteria laid down at (b) above to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the towns as a continuous urban spread. Thus, the town level data, wherever presented, also includes the data for outgrowths of such towns.

City

Towns with population of 100,000 and above are called cities.

Urban Agglomeration

An Urban Agglomeration is a continuous urban spread constituting a town and its adjoining urban outgrowths (OGs) or two or more physically contiguous towns together and any adjoining urban outgrowths of such towns. In some cases, railway colonies, university campuses, port areas, etc., may come up near a city or statutory town outside its statutory limits but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the town as a continuous urban spread.

For the purpose of delineation of Urban Agglomerations during Census of India 2001, following criteria are taken as pre-requisites:

(a) The core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town; and

(b) The total population of all the constituents (i.e., towns and outgrowths) of an Urban Agglomeration should not be less than 20,000 (as per the 1991 Census).

With these two basic criteria having been met, the following are the possible different situations in which Urban Agglomerations would be constituted:

i) a city or town with one or more contiguous outgrowths;

ii) two or more adjoining towns with their outgrowths; and

iii) a city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

Household

A 'household' is usually a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household. Each such person was to be treated as a separate household. The important link in finding out whether it was a household or not was a common kitchen.

There may be one member households, two member households or multi-member households.

Institutional Household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. To make the definition more clearly perceptible to the enumerators at the Census 2001, it was specifically mentioned that this category or households would cover only those households where a group of unrelated persons live in an institution and share a common kitchen.

Houseless household

Households who do not live in buildings or census houses but live in the open on roadside, pavements, in hume pipes, under flyovers and staircases, or in the open in places of worship, mandaps, railway platforms, etc., are treated as Houseless Households.

Scheduled Castes and Scheduled Tribes

Article 341 of the Constitution provides that the President may, with respect to any State or Union territory, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of the Constitution be deemed to be Scheduled Castes in relation to that State or Union territory. Article 342 similarly provides for specification of tribes or tribal communities or parts of or groups within tribes or tribal communities which are to be deemed for the purposes of the Constitution to be Scheduled Tribes in relation to the various States and Union territories. In pursuance of these provisions, the list of Scheduled Castes and/or Scheduled Tribes are notified for each State and Union territory and are valid only within the jurisdiction of that State or Union territory and not outside. In September 1956, by an amendment, the Presidential Order of 1950 and in all subsequent Presidential Orders relating to Scheduled Castes, the Hindu and the Sikh religions were placed on the same footing with regard to the specification of Scheduled Castes. Later on, as per the amendment made in the Constitution (Scheduled Castes) Order 1990, the Hindu, the Sikh and the Buddhist were placed on the same footing with regard to the recognition of the Scheduled Castes.

Language and Mother tongue

As per the census concept, each language is a group of mother tongues. The census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf mutes, the language usually spoken by the mother is considered as mother tongue. It is not necessary that the language spoken as mother tongue should have a script. The mother tongues returned by the respondents in census are classified and grouped under appropriate languages according to their linguistic characteristics.

Literate

A person aged 7 years and above who can both read and write with understanding in any language is taken as literate. A person who can only read but cannot write is not literate. It is not necessary that to be considered as literate, a person should have received any formal education or passed any minimum educational standard. Literacy could also have been achieved through adult literacy classes or through any non-formal educational system. People who are blind and can read in Braille are treated as literates.

Literacy rate

Literacy rate of the population is defined as the percentage of literates in the age-group seven years and above. For different age-groups the percentage of literates in that age-group gives the literacy rate.

Educational level

The highest level of education a person has completed.

Work

Work is defined as participation in any economically productive activity with or without compensation, wages or profit. Such participation may be physical and/or mental in nature. Work involves not only actual work but also includes effective supervision and direction of work. It even includes part time help or unpaid work on farm, family enterprise or in any other economic activity. All persons engaged in 'work' as defined above are workers. Persons who are engaged in cultivation or milk production even solely for domestic consumption are also treated as workers.

Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

Main worker

A person who has worked for major part of the reference period (i.e. six months or more during the last one year preceding the date of enumeration) in any economically productive activity is termed as 'Main worker'.

Marginal worker

A person who worked for less than six months of the reference period (i.e. in the last one year preceding the date of enumeration) in any economic activity is termed as 'Marginal worker'.

Non-worker

A person who has not worked at all in any economically productive activity during the reference period (i.e. last one year preceding the date of enumeration) is termed as 'Non worker'.

Cultivator :

For purposes of the Census, a person is classified as cultivator if he or she is engaged in cultivation on land owned or held from government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation.

A person, who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation in exchange of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or

a combination of both (agricultural labourers) is not treated as cultivator.

Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, ground-nuts, tapioca, etc., and pulses, raw jute and kindred fiber crop, cotton, cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops – tea, coffee, rubber, coconut and betel nuts (areca).

Agricultural labourer

A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She/he has no risk in the cultivation, but merely works on another person's land for wages. An agricultural labourer has no right of lease or contract on land on which she/he works.

Household industry worker

Household industry is defined as an industry conducted by the head of the household herself/himself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act and should be engaged in manufacturing, processing, servicing and repairs of goods.

It does not include professions such as a pleader, Doctor, Musician, Dancer, Waterman, Astrologer, Dhobi, Barber, etc. or merely trade or business, even if such professions, trade or services are run at home by members of the household.

Other worker

A person, who has been engaged in some economic activity during the reference period but not as a cultivator or agricultural labourer or in Household Industry, is termed as a 'Other Worker (OW)'. The type of workers that come under this category of 'OW' include all government servants, municipal employees, teachers, factory workers, plantation workers, those engaged in trade, commerce, business, transport, banking, mining, construction, political or social work, priests, entertainment artists, etc. In effect, all those workers other than cultivators or agricultural labourers or household industry workers, are 'Other Workers'.

Work participation rate

Percentage of workers (main + marginal) to total population.

Population density

Population density is the number of persons inhabited per square kilometer of the area.

Age

Age is measured in terms of the completed number of years.

Sex Ratio

Number of females per 1000 males in a population.

(vi) Non-Census Concepts

Improved drinking water

If the household had access to drinking water supplied from a tap, hand pump, tube well or well (protected or covered) situated within or outside the premises, it is considered as having access to improved drinking water.

It may be mentioned that such uniform definition may not be valid across all States.

System of sewerage

Generally, a sewerage system would mean a network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those

carrying both sewage and storm water are called combined sewers. However, in some towns, which are not provided with such underground sewerage system, it is served by open surface drain, box drain, silk pattern drain, etc., in these towns.

Type of latrine and method of disposal of night soil

There are three prevalent systems of disposal of human wastes, viz. :

(i) underground sewerage,

(ii) sanitary water flush latrines with individual disposal systems, like septic tank, leaching cess pool and collecting well, and

(iii) dry type of latrines with manual scavenging.

the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cistern (or hand flushing). Through this sewer the fecal matter is transported without the need for scavenging. This system generally exists in cities and big towns.

Where the street sewer does not exist, these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Here the liquid wastes from the water closet is disposed of locally in leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil, which renders the harmful liquid bacterially innocuous by the slow process of filtration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleaned at periodic intervals by a suitable device. The dry type of latrines are of service type latrines from where human excreta is removed by scavengers from house to house, in most cases carrying it on their heads or shoulders or in baskets with handle or wheel barrows. These are then collected in bullock carts or trucks or tractors and trolleys for being carried to the dumping grounds.

Fertility

In demography, the word fertility is used in relation to the actual production of children or occurrence of births specially live births. Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating the number of births to a full or part of the population, such as number of married women or number of women of child-bearing age. The definitions of the terminology used in computing different fertility rates are mentioned below:

Crude birth rate (CBR)

Ratio of the number of live births in a year to the mid year population, normally expressed per 1,000 population.

$$CBR = \frac{\text{Number of live births during the year}}{\text{Mid–year Population}} \times 1{,}000$$

Crude death rate (CDR)

Ratio of the number of deaths in a year to the mid year population, normally expressed per 1,000 population.

$$CDR = \frac{\text{Number of deaths during the year}}{\text{Mid-year Population}} \times 1{,}000$$

Natural growth rate

Growth rate is obtained as the difference between crude birth rate and crude death rate in the absence of migration.

Age specific fertility rate (ASFR)

Number of live births in a year to female population in any specified age-group normally expressed per 1,000 women.

$$ASFR = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1{,}000$$

Age specific marital fertility rate (ASMFR)

Number of live births in a year to married female population in any specified age-group normally expressed per 1,000 married women.

$$\text{ASMFR} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1{,}000$$

General fertility rate (GFR)

Number of live births per 1,000 women in the reproductive age-group (15-49) years in a given year.

$$\text{GFR} = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age-group (15-49) years}} \times 1{,}000$$

General marital fertility rate (GMFR)

Number of live births per 1,000 married women in reproductive age-group (15-49) years in a given year.

$$\text{GMFR} = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) years}} \times 1{,}000$$

Total fertility rate (TFR)

It is obtained as the total of the age specific fertility rates (number of children born per woman of the particular age) for the entire reproductive age span. It provides the average number of children that will be born to a woman under the fertility levels indicated by the age specific fertility rates assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TFR} = \frac{5 \times \sum^{45\text{-}49} \text{ASFR}_{15\text{-}19}}{1{,}000}$$

Total marital fertility rate (TMFR)

Average number of children that would be born to a married woman if she experiences the current fertility pattern throughout her reproductive span (15-49) years assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TMFR} = \frac{5 \times \sum^{45\text{-}49} \text{ASMFR}_{15\text{-}19}}{1{,}000}$$

Age-specific mortality rate (ASMR)

Number of deaths in a particular age and sex group per 1000 population of the same age-group.

$$\text{ASMR} = \frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of the same age-group}} \times 1{,}000$$

q1

Probability of dying between birth and age 1. This can be used as approximate value of Infant Mortality Rate (IMR) which gives the ratio of number of deaths in a year of children aged less than one year to the number of births in that year.

q2

Probability of dying between birth and age 2.

q5 :

Probability of dying between birth and age 5. This indicator is also known as Under Five Mortality Rate (U5MR).

Infant mortality rate (IMR)

Ratio of the number of infant deaths (deaths of children below one year) in a year to the number of live births in that year.

$$\text{IMR} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Infant mortality rate comprises of two parts, viz., Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz., Early neo-natal mortality rate and late neo-natal mortality rate. These are defined as:

Neo-natal mortality rate (NMR)

Number of infants dying within the first month of life (28 days or under) in a year per 1,000 live births of the same year.

$$NMR = \frac{\text{Number of infant deaths aged 28 days or under during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

i) Early neo- natal mortality rate

$$= \frac{\text{Number of infant deaths of less than 7 days during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

ii) Late neo-natal mortality rate

$$= \frac{\text{Number of infant deaths of 7 days to less than 29 days during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Post neo-natal mortality rate (PNMR)

$$= \frac{\text{Number of deaths of 29 days to less than One year during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Peri-natal mortality rate (PMR)

Number of still births plus deaths within 1st week of delivery per 1000 births in a year.

$$PMR = \frac{\text{Number of still births and infant deaths of less than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1{,}000$$

Still birth rate (SBR)

$$= \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1{,}000$$

Maternal mortality rate (MMR)

Number of deaths of women in the age-group 15-49 while pregnant or within 42 days of termination of pregnancy from any cause related to pregnancy and child birth per 1,00,000 live births in a given year.

$$MMR = \frac{\text{Number of maternal deaths to women in the age group 15-49}}{\text{Number of live birth}} \times 1{,}00{,}000$$

Eligible couple (Couples per 1,000 population)

Number of currently married females in the age-group 15-44 years per 1000 persons of all ages.

Child woman ratio (0-4)

1. Number of children in the age-group 0-4 years per 1000 women in the age-group 15-49 years.

Child woman ratio (5-9)

2. Number of children in the age-group 5-9 years per 1000 women in the age-group 15-49 years.

Migration, Internal and International migration, Impact of migration.

Migration

Migration is the third component of population change, the other two being mortality and fertility. A person is considered as a migrant by place of birth if the place in which he is enumerated during the Census is other than the place of his birth. Similarly

a person is considered as a migrant by place of last residence if the place in which he is enumerated during the Census is other than his place of immediate last residence. By capturing the last of the migrations in cases where persons have migrated more than once, this concept would give a better picture of current migration scenarios.

Internal And International Migration

The migrational movements are of three types (i) Migration within the state itself with its components (a) Migration within the district of enumeration (intra district migration) (b) Migration from one district of state to another district of state (interdistrict migration) (ii) Migration from one state to another state of the country interstate migration (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration.

Impact of Migration

As in 1991 and 2001 Census, like previous Censuses, had collected migration details for each individual by place of birth and last residence. Data on last residence along with details like duration of stay in the current residence and reason for migration provides useful insights for studying migration dynamics of population.

Civic status of urban units

Civic Status of a town/city is determined on the basis of Civic Administrative authority of the town e.g., Municipal Corporation/Corporation, Municipal Committee/Municipal council, Municipality etc.

Size class of UA / town

Size-class of UA / Town is based on the population. UAs / Towns with 100,000 and above population are classified as Class I UAs/Towns. These Class I UAs./ Towns are now further sub classified into seven sub classes namely M1 to M7 depending on the population size of UA/City/Town. These are :

M7 (5,000,000 and above);

M6 (2,000,000 to 4,999,999);

M5 (1,000,000-1,999,999);

M4 (500,000-999,999);

M3 (300,000-499,999);

M2 (200,000-299,999); and

M1 (100,000-199,999).

Towns with 50,000 to 99,999 population are classified as Class II towns, 20,000 to 49,999 population are Class III towns, population with 10,000-19,999 are Class IV towns, population with 5,000 and 9,999 are Class V towns and towns with less than 5,000 population are Class VI towns.

Slum area

The Slum Areas (Improvement and Clearance) Act, 1956, which was enacted by the Central Government defined slums as:

a) Areas where buildings are in any respect unfit for human habitation; or

b) are by reasons of dilapidation, overcrowding, fault arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light or sanitation facilities, or any combination of these factors, are detrimental to safety, health or morals.

Mega city

The concept of 'Mega city' is a recent phenomenon in the Urban Sociology and is defined in term of metropolitan city in the form of large size, problem of management of civic amenities and capacity to absorb the relatively high growth of population. Indian Census in 1991 treated the population size of 5 million and above as the cut off point to identify a place as the mega city. Whereas, for the purpose of inclusion in Centrally Sponsored Scheme for Infrastructure Development in Mega cities the Ministry of Urban Affairs and employment, Department of Urban Development adopted the criteria of 4 million and above population as per 1991 Census for Mega Cities. In 2001 Census, cities with 10 millions and above population have been treated as Mega cities.

(vii) CENSUS 2001 FINDINGS

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 2001 Census is the midnight of 28th February, 2001 i.e. the census provides a snapshot of the population of the country, as it existed at the midnight of 28th February, 2001. Actual enumeration was spread over a period of 20 days from 9th to 28th February, 2001 followed by revisional round up to 5th March, 2001 for up dating of the population figures with reference to the midnight of 28th February, 2001. Household schedule was canvassed by the enumerator and with a view to ensuring uniformity in approach in understanding the various concepts and in proper eliciting and recording of the information, the enumerators and supervisors were imparted both theoretical as well as practical training intensively in 3 rounds.

As a prelude to the actual census the urban and rural areas were identified and listed out in respect of each administrative unit. The Directorate of Census Operations had prepared the list of urban areas and simultaneously, a list of villages. These lists formed the basic frame for the organization of the census operations. Thereafter, geographical areas that could be conveniently covered by each enumerator were carefully carved out to constitute the enumerator's block (EB).

The second major step was the house listing operation, which was carried out in this District during April, 2000. Thereafter, in order to adhere to the prescribed workload norms the actual census enumerator's blocks were carefully demarcated on the basis of the house list population and the layout sketches and notional maps prepared for the houselisting operation. Houselisting operation was also utilized to collect wealth of information on items such as predominant material used for construction of houses, amenities available to the census households, number of living rooms etc.

DISTRIBUTION OF POPULATION IN RURAL AND URBAN AREAS

In 2001, the total population of Tiruvannamalai District is recorded as 2,186,125, the rural population as 1,785,364 and the urban population as 400,761.

The table below shows the taluk level distribution of population is total Rural and Urban areas of Tiruvannamalai district. The Tiruvannamalai Taluk has come out with the highest population of 490,971 and the lowest population recorded in Arani Taluk 2,68,043. Among Taluks in rural population Chengam Taluk stands first with 3,60,735 followed by Polur Taluk with 3,42,010, Tiruvannamalai Taluk with 3,34,534, Cheyyar Taluk with 277,231. The population of Urban areas. Tiruvannamalai Taluk stands in the first position with 156,637, followed by Vandavasi 40,330 and Cheyyar taluk with 40,317. In Urban population with Chengam has recorded the lowest with 33,228.

LITERACY

A person who can both read and write with understanding in any language has been taken as literate. A person who can merely read but cannot write is not literate. It is not necessary that a person who is literate should have received any formal education and should have passed any minimum educational standard. Like 1991 Census all children of age 6 years or less are treated as illiterates although they may be going to school and can read and write a few odd words. During 1981 Census this limit was upto the age of 4 years. It had also been decided in the 2001 Census to use only effective literacy rates i.e. the ratio of literates and population excluding the age group of 0-6. The literacy rate of the district was at 67.4%, below the literacy rate of the State (73.45%). The literacy rate for males is higher than females. The male literacy stood at 79.2% as compared to 55.6% for females.

Ramanashram

Tiruvannamalai is most famous as the abode of the great saint of the recent century Shrt. Ramana Maharishi. He is unique in our times perfectly embodies the ultimate truth of self-realisation.He spoke very little and wrote even less, but communicated in silence so deep and powerful which attracted ardent seekers from all over the world. As a 16 year old boy, he experienced spiritual awakening which was irrevocable and complete. Even at that age, he was able to conquer death and establish that it is only the body that dies and not the soul. He abandoned everything including family and he took himself to Arunachala for the rest of his life. For more than 20 years, he dwelt in the caves on the lower slops of his belowed Arunachala. A band of followers gathered around him including his mother. In 1922 his mother left the body and in the same place is situated Maharishis Ashram. There we can see the Old Hall where his devotees sit in undisturbed silence. Bhagavan's Samadhi, Shrine and Mother's Shrine, Nirvana room where the saint spent this last days and attained Maha Nirvana on April 4, 1950. Vedapadasala where brahmin boys are trained in Traditional Vocation in Yajurveda. Dispensary with free medical facilities for local people, Goshala, the cattle farm which provides pure dairy products for house needs, Skanda Ashramam besides Virupaksha Cave, where he lived from 1899 to 1916 and the big temple of Arunachaleswarer situated around it, Annadana for poor, even today is a daily routine of the Ashram. His indiscriminate love for all living beings is explicit through the samadhis erected for his beloved cow, dog and the arrow by the sides of human shrines. Such great saints are born seldom once in many centuries up to which this holy place is gifted with

Tiruvannamalai

This is one of the most holy places of Tamil Nadu especially for the Hindus where Lord Shiva blesses in the name of Arunachaleswarar. As described earlier, Lord Shiva is in the form of Agnilinga which is one among the Panchalingas. Karthigai Deepam in the Tamil Month of Karthigai is the celebration of this holy place when three to five lakhs of devotees assembled to offer their worship. This town is very famous for Girivalam from December 1997, the number of pilgrims who turnover from Girivalam increases on each full-noon day and as on that date nearly 3 lakhs pilgrims are attending Girivalam.

Sathanur Dam

This has been constructed during the second Five Year Plan across Pennaiyar and was inaugurated on 10.11.1957. It is situated 30 Km. away to the west of Tiruvannamalai with a height of 120 ft. benefitting 45,000 acres of land for irrigating parts of Tiruvannamalai and Villupuram Districts. It supplies drinking water to the main city of Tiruvannamalai. Being decorated beautifully it attracts tourists from all over Tamil Nadu.

Jawathu Hills

The Javadi Hills, Jamuna Maruthur Hills is a beautiful tourist place. It is a Summer Mini-Ooty. The water falls at Beman Medu and the lake here are of tourist importance. There is a proposal to provide boating facility in this lake. About 12 Km. away from Jamuna lies Maruthur Raj Kembera Malai and it is proposed to built a temple of Lord Rama at an estimated cost of 5 crores. This may perhaps be a prospective place of tourise importance. Apart from the the above places Padavedu Renukambal temple near Polur, Satya Vijaya place near Arani are also situated in the district.

(xi) Major characteristics of the district, contribution of the district in the form of any historical figure associated with the district.

Thusimamandur

This is 100 Km. from Tiruvannamalai, situated 8 Km. from Kanchipuram on Tiruvannamalai Road. This is well known for the famous Pallava temple and lake.

This is situated near Thanipadi at Tiruvannamalai as the famous "Chinnanakayam Kulam" around which sculptures of historical importance are found.

(xii) Scope of Village and Town Directory

Village Directory

The "Village Directory" is one of the traditional compilations of the Census. It gives the list of Revenue villages, their location numbers, their area, population, number of households, amenities such as educational, medical, drinking water, post and telegraph, commercial and co-operative banks, agricultural, non-agricultural and other credit societies, recreational and cultural facilities, communication, approach to village, nearest town with distance, power supply, availability of newspaper and magazines, most important commodity manufactured and land use of each village.

Village is a statutory recognized unit having a definite boundary and separate land records. The villages which are considered as Census Towns, the amenities data are shown in the Town Directory.

The 'un-inhabited' villages (villages with no population) have been indicated as such after furnishing details in columns 1 to 3 i.e., Serial number, Name of village & location code and area of the village. The land use data for such villages are shown in col. 19 to 23.

Town Directory

The Town Directory is presented for each town covering different aspects of urban life. Like 1991 census, in the present census also there are seven Statements to be included in the District Census Handbook for presentation of data. The seventh Statement relates to slums which was numbered as IV – A in 1991 Census. Statements I to VI contain data about growth, density, sex ratio, physical aspects of towns, communications, municipal finances, civic, medical, educational and other amenities and trade, commerce, Industry, Banking facilities. This District data for the towns/U.A.s has been presented in these six statements. Similarly the seventh Statement presents the data for slums.

Statement I shows status and growth history of the towns of this District. Column 2 in this Statement indicates class, name and civic administration status of a town (as in 2000). Class of the town indicated under this column has been introduced to facilitate the analysis of town directory data at the State and at the national level.. Column 6 presents area in Sq. kms. while Column 7 presents number of households including houseless households. Columns 8 to 18 give population and growth rate of towns since 1901. Column 19 presents density and Columns 20 to 22 present sex-ratio.

Statement II shows physical aspects and location of each town as in 1999. Column 2 shows the class and name of Town. Columns 3 to 5 show the rainfall and maximum and minimum temperature. Columns 6 to 13 show the name and distance of State HQ, district HQ, Tahsil HQ, nearest city with a population of one lakh and more, nearest city with a population of five lakh and more, Railway Station, Bus facility and Navigable river/canal from town.

Statement III shows the municipal finance of the Towns. The income and expenditure for the towns of this district has been presented in this Statement.

Statement IV provides information for civic and other amenities available to the Town. This Statement presents general population as well as the Scheduled Castes/Scheduled Tribes population as per 2001 census under Columns 3, 4 and 5. Columns 6 to 20 present data regarding road length, system of sewerage, number of latrines, method of disposal of night soil, protected water supply, fire fighting service, electric connections for domestic, industrial and commercial as well as road lighting (points) and others.

Statement V gives information regarding educational, medical, recreational and cultural facilities available in the town. Population figures for 2001 census have also been presented for the towns of this District which will facilitate in analyzing data on facilities available

to the people. Data pertaining to medical facilities have been obtained from Director of Health Services and shown under Columns 4 and 5. The information on educational facilities has been shown under Column 6-15.

This Statement also shows, number of working women's hostels, recreational and cultural facilities available in the town under Columns 16 to 20.

Statement VI presents information in respect of trade, commerce, industry and banking services in the towns. Columns 3 to 8 indicate three most important commodities exported and manufactured in the Towns. Information on number of banks available in the towns have been presented under column 9 whereas Columns 10 and 11 show the number of agricultural and non-agricultural credit societies in the towns.

Schools upto XI or XII classes are considered as Higher Secondary/Intermediate/Pre University /Junior College etc. This would cover 10+2 classes whether held in schools or college.

If there are composite schools like middle schools with primary classes or Secondary schools with Middle classes, these are also included in the number of Primary and Middle schools, respectively. For example, if in a town, there are two Primary Schools and one Middle school with Primary classes, the number of Primary schools in the town is given as three and that of Middle schools as one though there are only three educational institutions.

If there are more institutions of a type in the town, the number is indicated within bracket along with the abbreviation, e.g. P(4), M(3).

Column 15 : Adult literacy class/centres

This column has been introduced keeping in view the Minimum Needs Programme of the Planning Commission. There are number of Adult Education Centres which are included in these columns.

If an educational facility is not available in the town, the name of the nearest place and its distance in kilometres from the town where the facility is available is mentioned.

Column 16 : Working Women's hostels with number of seats

The number of working women's hostel if available in the referent town is mentioned with number of seats. If the facility is not available in the town the name of nearest place with distance where the facility is available is recorded.

PRIMARY CENSUS ABSTRACT

Brief note on Primary Census Abstract

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another.

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5,463 sub-districts, 5161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars; Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation**.** The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration. The Schedules for both the phases were scanned through high speed scanners in fifteen data centres across the country and hand-written data from the schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing. The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million schedules consisting of about 1028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain. This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rural areas and the ward level in the urban areas. Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use. The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and their senior officers were required to make detailed

presentations of data for their own state both in respect to the quality and the coverage and only after the full possible satisfaction of the TFQA, the population data was cleared.

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population. In the earlier censuses, the total Scheduled Castes and Scheduled Tribes population were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual. Two Special Task Forces, one on Religion and the other on Scheduled Castes/Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses.

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge. The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encountered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature. Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels.

The entire work relating to the data validation and scrutiny was completed by all the States/Union territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division.

Primary Census Abstract

The Primary Census Abstract which is yet another important publication of 2001 census gives basic information on Area, Total Households, Total Population, Scheduled Castes, Scheduled Tribes Population, Population in the age group 0-6, Literates, Main workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural laborers, (iii) Household Industry Workers, and (iv) Other Workers and also Non-workers. The characteristics of the Total Population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless population and are presented by sex and rural-urban residence. This data is presented at different levels, namely, India, States/ Union territories, Districts and Cities, Urban Agglomerations (Population 1,00,000 and above) in three different tables. In addition, the Appendix of said publication provides Houseless and Institutional Households and their population by residence and sex for 2001 for India, State and Union territory.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census Abstract. This practice was continued in 1991 also. In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and in its place, four-fold industrial classification of both 'main workers' and 'marginal workers' are included. In 1981 census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis of literacy data.

The data in the Primary Census Abstracts are presented at different levels, The District Primary Census Abstract is presented at District/ C D block/ UA/City/Town, Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented at District/C D block/ Town, Village Primary Census Abstract is presented villagewise for each C D block and Urban Primary Census Abstract at Town/Ward***** level. The Primary Census Abstract data for each of these characteristics is presented by sex and rural-urban residence.

The District Primary Census Abstract has been presented in 59 columns, Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes has been presented in 52 columns, Village Primary Census Abstract and Urban Primary Census Abstract has been presented in 58 columns. The information on each village under a C D block are presented in the Village Primary Census Abstract and each of the wards under a town has been provided in the Urban Primary Census Abstract exist in the district. The Data was presented for villages C D block-wise for the first time in 1991 Census. This practice is continued in 2001 Census also.

The concepts and definitions used in the column heading are already explained under the sub heading 'Census concepts' in the Analytical note. The Total population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts is as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tahasils, P.Ss and by the local bodies in respect of towns are given in sq.kms. The area figures of the villages supplied by the Tahasildars in acres have been converted and shown in hectares. The area figures of the C D block is the total of the village areas coming under each C D block. The area figures for the district supplied by the Surveyor General of India have been adopted to maintain uniformity at the national level. The total area figures of all the Tahsils/C D blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of P.S./Tahsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tahsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different levels.

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on total population, Scheduled Castes population and Scheduled Tribes population for each town.

ANNEXURE II

FRTILITY AND MORTALITY MEASURES

FERTILITY LEVELS

In demography, the word fertility is used in relation to the actual production of children or "occurrence of births specially live birth". Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating number of births to size of some section of the population, such as number of married couples or number of women of child bearing age.

In other words, it is a major component of population growth. In the 1991 Census, questions of fertility related to age at marriage, number of surviving children at present, number of children ever born alive and children born alive during the last one year were asked. The first three questions were asked to all ever-married women and the last question related to currently married women. In 2001 census too the same information were gathered but these are not readily available.

SELECTED INDICATORS OF FEMALE NUPTIALITY

State / District	Total/ Rural/ Urban	Mean age at marriage of crrently married women			Percentage of currently married women with age at marriage below 18		
		Total	who married during		Total	who married during	
			1981-86	1986-91		1981-86	1986-91
Tamil Nadu	T	19.1	19.3	19.7	31.6	28.2	24.5
	R	19.0	19.1	19.3	32.2	30.2	27.8
	U	19.3	19.7	20.3	30.4	24.4	18.6
Tiruvannamalai	T	18.4	18.6	18.6	42.1	37.3	38.3
	R	18.3	18.6	18.5	42.3	38.0	39.5
	U	18.6	19.0	19.2	40.5	32.5	30.6

The above table explains the female age at marriage relating to all women who were living with their husbands. Some of them might have been recently married and some of them decades ago. In view of this, the figures mentioned in the table should be regarded as indicating the situation for the population as a whole.

It is observed from the above table that the mean age at marriage of currently married females in Tiruvannamalai District was 18.37 years in 1991, slightly lower than the corresponding state level of 19.12 years. In the rural areas also, same trend was observed in the district data when compared with those of the corresponding state data in the above table.

Presently, the statutory minimum age at marriage for females is 18 years. It is worth examining the proportion of the currently married females whose age at marriage was below this limit during the periods 1981 - 86 and 1986 - 91. It is observed from the table that this proportion has increased from 31.37% during 1981 - 86 to 38.28% in 1986 - 91 in the district which are higher than the corresponding state level. Same trend was observed in case of rural areas also.

CHILD MORTALITY LEVELS

The estimates presented here have been obtained using the data on the number of children ever born and number of children surviving to ever-married women. Information on questions on children ever born and children surviving canvassed for all ever-married women have been tabulated by age of the mother. From this, estimates of child mortality (qi) have been worked out using Brass technique, where q (i) is the probability of a newborn child dying before age (i) = 1, 2, 3 and 5.

ESTIMATES OF CHILD MORTALITY INDICATORS BY SEX

State / District		Tamil Nadu		Tiruvannamalai	
Year		1991	1981	1991	1981
Persons	q(1)	54	104	58	121
	q(2)	58	103	64	124
	q(3)	61	114	68	137
	q(5)	67	132	72	158
Males	q(1)	55	114	64	133
	q(2)	57	110	64	131
	q(3)	61	116	68	14
	q(5)	64	134	71	159
Females	q(1)	51	93	51	109
	q(2)	60	96	65	116
	q(3)	62	111	67	133
	q(5)	70	131	72	156

It is observed from the above table that the number of children ever born per ever-married women in rural and urban areas of Tiruvannamalai District were almost same.

ANNEXURE III

VARIOUS MEASURES OF FERTILITY AND MEAN AGE AT MARRIAGE

The measures of fertility worked out were based of the F - series tables of 1991 Census pertaining to Tamil Nadu and Tiruvannamalai district are defined as below.

ESTIMATES OF FERTILITY INDICATORS

Sl. No.	State / District	Year	CBR	TFR	TMFR	GFR	GMFR
1	Tamil Nadu	1981	32.0	3.9	5.5	123	169
		1991	26.4	3.1	4.8	99	136
2	Tiruvannamalai	1981	34.3	4.5	5.7	138	180
		1991	26.7	3.4	4.8	107	138

Source: Occasional paper No. 1 of 1997, RGI

The values of CBR, TFR, TMFR, GFR and GMFR are presented separately for Tamil Nadu and Tiruvannamalai District in the above table. These values can be compared for 1981 and 1991 Censuses. The table shows that in Tiruvannamalai District, all the above-mentioned rates from 1981 to 1991 have declined. Similar trend was observed at state level also. On comparing the district level data with the State level data in the above table, it is observed that all the above mentioned rates at the district level were higher than those at the State level.

Different fertility measures indicate that mostly all the fertility levels in the district were higher compared to the state average during 1991. This was duly supported by the lower age at marriage of females in the district compared to the state.

IMPORTANT INDICES OF FERTILITY

Fertility Indices	Tiruvannamalai			Tamil Nadu		
	Total	Rural	Urban	Total	Rural	Urban
Number of children ever born per ever married women in age group 45 - 49	3.6	3.6	4.1	3.4	3.4	3.6
Child - women ratio (0-4 years)	440	453	355	348	369	311
Child - women ratio (5-9 years)	524	530	483	447	462	418

One of the most useful indices that can be derived from the question on number of children born alive is the average number of children ever born alive per ever married women by age - group. Since most of the women complete their reproduction by the age - group 45 - 49, the average number of children ever born per ever-married women in the age - group 45 - 49 is termed as an index of completed level of fertility. Ever married include widows, divorced and separated women.

In the above table, average number of children born per ever-married women in the age group 45 - 49 in 1991 has been presented for total, rural and urban areas for Tiruvannamalai District and Tamil Nadu. It is observed from the above table that the number of children ever born per ever-married women in rural and urban areas of Tiruvannamalai District was almost same.

Child - women ratio, a relative measure, is calculated to know the fertility performance of women. It is seen from the above table that child - women ratio in rural areas are higher than urban areas of the Tiruvannamalai District and same trend was observed at state level.

ANNEXURE IV

MIGRATION

Migration is the third component of population change, the other two being mortality and fertility. A person is considered as a migrant by place of birth if the place in which he is enumerated during the Census is other than the place of his birth. Similarly a person is considered as a migrant by place of last residence if the place in which he is enumerated during the Census is other than his place of immediate last residence.

INTERNAL AND INTERNATIONAL MGRATION

The migrational movements are of three types; (i) Migration within the state itself with its components: (a) Migration within the district of enumeration (intra district migration), (b) Migration from one district of state to another district of state (interdistrict migration), (ii) Migration from one state to another state of the country (interstate migration) and (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration.

REASONS OF MIGRATION

As in 1991 Census, the reasons for migration were elicited in 2001 Census also. The reasons for migration were broadly categorized as (i) Employment/ work, (ii) Business, (iii) Education, (iv) Marriage, (v) Moved after birth, (vi) Moved with household and (vii) Any other reason. Reasons for migration has been elicited only with reference to movement from place of last residence.

IMPACT OF MIGRATION

Growth of population of a particular place depends upon natural increase due to excess of births over deaths and migration. Knowledge of trends in migration helps in future planning of a region.

ANNEXURE VIII

DISTRIBUTION OF DIFFERENT MOTHER TONGUES RETURNED

The definition of mother tongue used in 2001 Census is same as in 1991 Census. "Mother Tongue is the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf means the language usually spoken by the mother should be recorded."

As per the Census concept, each language is a group of mother tongues. The Census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. There are 18 languages included in the Eighth Schedule to the Constitution of India (Scheduled Languages).
