VILUPPURAM DISTRICT

VILLAGE AND TOWNWISE PRIMARY CENSUS ABSTRACT

Dr. C. Chandramouli
of the Indian Administrative Service
Director of Census Operations, Tamil Nadu

GINGEE FORT

Gingee Fort is nestled on three hills and enclosed by a rampart of 60 feet thickness in Gingee Taluk of Villuppuram district. The indomitable courage and valour of its erstwhile rulers caused Father Pimento, a Jesuit priest to call the Gingee Fort the Troy of the East. Besieged by the Mughals and battered by the British, the Fort still stands 800 ft. height, guarded by a moat, eighty feet wide. Much of the early history of this 800 year old Fort is shrouded in mystery, as the Fort seems to have changed many hands before it was annexed to the Vijayanagar Empire.

According to local legend Gingee Amman, was one of the seven virgins who were the guardian deities of the village. Legend has it that at around 1200 A.D., Ananda Kone, chief of the local shepherd community, fortified Gingee. In 1240 A.D. krishna Kone, his successor is said to have fortified the northern hill, which later came to be known as Krishnagiri. The Kone dynasty gave way to the Kurumbars, who established their headquarters at Sendamanagalam, which later came under the powerful Chola Empire. Recorded history goes back to the 16th century, when Gingee(GINGEE) became the seat of the Nayaka rulers, who were under the lordship of the expanding Vijayanagar Empire. Krishnadevaraya appointed Krishnappa Nayaka, and he was considered the founder of the Nayaka line of Gingee.

Gingee today, with its ruined Forts, temples and granaries, presents a different pictures from the glorious splendor of its bygone days. But the remains of the valorous past, speak volumes about the numerous invasions, warfare and bravery that it witnessed.

Foreword

The District Census Handbook (DCHB) published by Census Organisation since 1951 census, is one of the important publications in the context of planning and development at grossroots level. The publication, which is brought out for each district, contains several demographic and socio-economic characteristics village-wise and town-wise of the district alongwith the status of availability of civic amenities, infrastructural facilities, etc.

The scope of the DCHB was initially confined to a few Census Tables and Primary Census Abstract (PCA) of each village and town within the district. Thereafter, at successive censuses, its scope and coverage has been enlarged. The DCHB published at the 1961 census provided a descriptive account of the district, administrative statistics, census tables and a village and town directory including PCA. The 1971 census-DCHB series was in three parts: Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. The 1981 census DCHB was in two parts: Part-A contained village and town directory and Part-B the PCA of village and town including the SCs and STs PCA up to tahsil/ town levels. New features alongwith restructuring of the formats of village and town directory were added into it. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent village, the distance in broad ranges from the nearest place having such an amenity, was given. Information on new items such as adult literacy centres, primary health sub-centres and community health workers in the village were provided so as to meet the requirements of some of the Revised Minimum Needs Programme. Information on approach to the village was provided for the first time in the Village Directory so as to give the details on number of inaccessible villages in each district. In the Town Directory, a statement (VII) on slums was introduced to provide the details on civic and other amenities in the notified slums of Class I and Class II towns.

The 1991 census DCHB, by and large, followed the pattern of presentation of 1981 census, except the format of PCA was restructured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 census. In addition, sex-wise population in 0-6 age group was included in the PCA for the first time with a view to enable the data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 census. One of the important innovations in the 1991 census was the Community Development Block (CD block) level presentation of village directory and PCA data instead of the traditional tahsil/taluk/PS level presentation. It was expected that the presentation of village directory and PCA data at CD block level will help the planners in formulation of micro level development plans, CD block being lowest administrative unit.

The present series of 2001 census DCHBs have been made more informative and exhaustive in terms of coverage and content. The Village Directory has been enlarged in scope by including a number of other facilities like banking, recreational and cultural facilities, newspapers and magazines and 'most important commodity' manufactured in village. Income and expenditure of gram panchayat, wherever possible, has been provided. Apart from these, more details on distance(s) at which basic amenities are available (if not available in the village), are given. This includes educational facilities (namely primary and middle schools and college), medical facilities (viz. Allopathic Hospital, Maternity & Child Welfare Centre and Primary Health Centre), drinking water, post & telegraph (post office and phone), communication, bank, credit societies and recreational facilities. In Town Directory, the statement on Slums has been modified and its coverage enlarged by including

details on all slums instead of 'notified slums'. The information is given in case of all statutory towns irrespective of their class, against only Class I and Class II towns in the 1981 and 1991 censuses. The basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. Two other significant additions in the publication are inclusion of 'motif' highlighting significant characteristic of the district and analytical notes as annexures. The analytical notes on (i) fertility and mortality and (ii) various measures of fertility and mean age at marriage are prepared based on 1991 Census. Whereas, in the notes relating to (i) percentage distribution of migrants by place of birth/place of last residence, (ii) main religions, (iii) marital status of population, (iv) age, sex and education and (v) distribution of spectrum of mother tongue, nature and extent of changes occurred in the district in its basic socio-demographic features during the decade 1991-2001 are analysed. The eight digits permanent location code number (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

The village and town level amenity data have been collected, compiled and computerised in prescribed record structure under the supervision of Dr. C. Chandramouli, Director of Census Operations, Tamil Nadu. Thereafter, efforts have been made to ensure comparability of the information with that of 1991 census data and the information brought out by the respective State Governments in their annual reports and statistical handbooks for various years after 1991. The task of planning, designing and coordination of this publication was carried out by Shri R.G. Mitra, Deputy Registrar General (C&T) and Dr. I.C. Agrawal, Assistant Registrar General of Social Studies Division. Dr. R.P.Singh, Deputy Registrar General (Map) provided the technical guidance in the preparation of maps. Whereas, Shri Anil Kumar Arora, Deputy Director of Data Processing Division who worked under the overall supervision of Shri Himakar, Addl. Director (EDP) helped in preparation of record structure for computerisation of village and town directory data and the programme for the generation of Village Directory and Town Directory statements including analytical inset tables. The draft DCHB manuscripts received from the Census Directorates have been scrutinised in the Social Studies Division under the guidance of Shri S.L. Jain, Deputy Director and Shri R.K. Mehta, Assistant Director. I am thankful to all of them and others who have contributed to make this publication possible.

Preface

Publication of the District Census Handbooks (DCHBs) was initiated after the 1951 census and is continuing since then with innovations/modifications after each decennial census. This is the most valuable district level publication brought out by the census organization on behalf of each State Government/Union Territory administration. It *inter-alia* provides data/information on some of the basic demographic and socio-economic characteristics and on the availability of certain important civic amenities/facilities in each village and town of the respective districts.

The District Census Handbook has two segments: Part A and Part B. Part A primarily deals with village and Town Directory and Part B contains Primary Census Abstract of each village and town of the District. The 1991 Census data presentation both in Part A and Part B of this book was the transition from traditional presentation at Taluk level to CD Block level and this pattern continued in 2001 census as well.

For the first time in 2001 census, the District Census Handbooks are being made available in electronic format.

The District Census Handbook is the joint collaboration of the Census Directorate and the Government of Tamil Nadu. On behalf of the Government of Tamil Nadu, this Directorate has prepared the manuscript of this book.

The District Census Handbooks of 2001 have some additional information which is based on the 2001 census as compared to the previous censuses like capturing of information on participation of women in economic activities, netting all the children in age-group 0-14 as also elderly people of age 60 years and above. The data about the number of handicapped persons including partial disability has also been collected in 2001 census for the whole of India. The most important methodological innovation introduced in 2001 census relate to carving out separate slum enumeration blocks.

The data being presented in this publication have been collected and compiled by Shri M.R.V. Krishna Rao, Deputy Director of Census Operations, Tamil Nadu with the assistance of Shri S.K. Srivastav, N. Sukumar Nandagopal and A. Achchhu Ali, Assistant Directors. For the preparation of manuscript of this book, I received wholehearted co-operation from all the Heads of Departments, Heads of offices of the District / Taluk / Corporation / Municipal / Town and Rural Administration and a number of dedicated and experienced Census staff of this office. I am grateful to all of them for their valuable contribution in the accomplishment of this task of national importance. I must place on record the co-operation extended to me by the press media and electronic media to make the census taking a great success in the state.

I am deeply grateful to Shri J.K. Banthia, IAS the Registrar General and Census Commissioner, India, New Delhi for the valuable guidance and advice at every step till the finalisation of this handbook. I also express my thanks to Dr. I.C. Agrawal, Assistant Registrar General (Social Studies Division) and Shri S.L. Jain, Deputy Director, ORGI, New Delhi for preparing the set of instructions for the compilation of the village and Town Directory and other inset tables etc. being inserted in this District Census Handbook.

In particular, it has to be mentioned that the write up portion was taken up by Shri M.R.V.Krishna Rao, Deputy Director and finalised by Dr. D. Venkatesan, Deputy Director with the assistance of other members of the staff whose names have been mentioned in the “Acknowledgements”.

ANALYTICAL NOTE

Analytical Note

(i) History and Scope of the District Census Handbook

The compilation of District Census Handbook is an innovation of the 1951 Census. District is considered as the most important unit for presentation of Census data. Census Statistics are also compiled for individual villages and towns, as they constitute the basic units of human habitation. Besides this, some other useful information pertaining to the land and the people has also been included in it to make it a self-contained book of reference for the District. It was, however, not altogether a new idea, since census data for smaller units were published in earlier censuses also in one form or the other. For the first time in 1891 District wise list of villages were published giving the population of each village. At the 1911 Census, data of villages were published in the form of village directory. Such village directories were again compiled in the shape of District Census Statistics at the 1921 Census. Finally, District Census Handbooks emerged as regular decennial publication since 1951 Census. The demand for the basic data for the smallest administrative unit was greatly felt in the post-independence era. The ushering in an era of planning and development in the wake of launching of Five-year plans after attaining independence, urgent need for detailed data at village level was felt. Thus, when the proposal to bring out District Census Handbook was put before the State Government, they readily agreed for the compilation and printing of District Census Handbooks through their respective Directors of Census Operations, under the authority of local government concerned. The general appreciation and utility of this handbook encouraged the Census Organisation to increase the scope of publication.

The tradition thus built up has been continued in the present series of District Census Handbooks. In the 1971 Census, it had been decided to bring out these hand books in three parts viz; Parts A, B and C. In respect of Tamil Nadu, Parts A and B of this publication had been printed in one volume and part C as a separate volume. During 1981 Census, it had been decided to print it in two parts viz. Parts A and B separately. Part A of this handbook consists of village and Town Directory and part B gives data on Primary Census Abstract (PCA). In 1991 Census also, the same pattern was adopted publishing Parts A and B in a single/double volumes as per the requirement and determining the size of the publication. However, in this census some of the non-census data included information on girl schools, social forestry areas etc. whereas items like staple food and information on newspapers etc. have been omitted.

The present Census District Census Handbook is being brought out in two volumes (Part A and Part B) which contain the village and town directory as also the Primary Census Abstract and it should certainly quench the thirst of the planners involved in micro level planning. Similarly, additional data revealing civic and other amenities in Class I town has been presented especially in respect of slum dewellers. Scholars and planners alike should benefit from the data on amenities.

(ii) Brief History of the District

Viluppuram District formed part of the Tondaimandalam. During the Sangam age, the district along with the rest of Tondaimandalam territory had passed into the hands of Cholas. Karikal Chols (50-90AD) defeated the combined forces of Cheras, Pandiyas and later made an alliance with Cheras and established friendly relations with the ruler of the Pandiya Kingdom. The Cholas were overthrown during the Pallava regime by Simha Vishnu Pallava and Viluppuram region was under Pallava rule for a few centuries. Later, the Pallavas were overpowered by Pandiyas. Chola rule was once again revived by Vijayalaya Cholan and his son and successor Aditya-I (871-907 AD) consolidated the new Chola dynasty who annihilated the Pandiyan power at first and later subdued the Pallavas. Viluppuram contined to remain under Chola supremacy along with other regions of Tondaimandalam since Aditya I was followed by a

succession of powerful rulers. The later Chola rulers of 10th and 12th Century A.D. were weak and finally Viluppuram along with rest of the Chola empire passed on to the hands of the Eastern Chalukyas. For a period, Cholas regained their power with the assistance of the Hoysalas of the north, but their supremacy came to an end with the rise of Jatavarman Sundara Pandis-I (1251 AD) who defeated the Cholas and established Pandiyan power over Viluppuram regions. The sway of the Pandiyan Kings over the region lasted little over 50 years, followed by Muslim domination from 338 to 1378 A.D.

(iii) Administrative set-up

Viluppuram District was created by bifurcation of the erstwhile South Arcot District and commenced its function from 30.09.1993 with the headquarters at Viluppuram. There are four Revenue Divisions, 8 Taluks, 2 Municipalities, 16 Town Panchayats, 22 Panchayat Unions, 1,104 Village Panchayats and 1,430 Revnue Villages in this District.

(iv) Physical Features

The Viluppuram district lies between 11° and 35° northern latitude and 78°.38' and 80° eastern longitude. It is bounded by Kancheepuram on north and Tiruvannamalai district on the west, on the South by Cuddalore district and east by Union Territory of Pondicherry.

Physiography

The District has an area of 7222.03 Sq.Kms. constituting 5.55 percent of the State's total area. The Vellar is an important river of the district along with its tributaries. Vasishtanadi and Sweytanadi form the boundary between Cuddalore and Viluppuram district for about 58 Kms. Besides, the sea barrier on the east, the Kalrayan hill range is an another natural border for the district. The district has a coastline of about 30 Kms stretching out in Marakkanam and Vanur blocks.

The district has most by flat plain sloping gently from the west to the sea on the east and also from the north to the south except for a strip of high ground running across the district from Pondicherry to Ulundurpet.The region can be distinguished into the following natural divisions. On the west, the Kallakurichi Taluk and the neighbouring areas with the Kalrayan Hills and their undulating valleys are noted for dense woods and green jungles. The eastern part consists of red soil tracts and wide spread paddy fields and green groves of fruit bearing trees marked here and there by broad open tanks. The most uninviling part of all regions in the district lies to the north of Tirukoilur Taluk, possessing most by arenaceous and virtually barren soil. The lands in the north especially those around Gingee Hills are most fascinating with numerous hills and hillocks of fantastic shapes and thick jungles that go with them. The Southern region of the district is comparatively green and fertile. The seashore is fringed with a belt of blown sand of varying width.

Rivers

The important rivers that flow through Viluppuram district are the Gingee river, also known as the Varahanadi, Ponnaiyar, Gadilam and Vellar river. Among them, the principal river is the Ponnaiyar river.

The river rises in the Chenna Kesava hill of Nandidurg in Karnataka and passes through Dharmapuri district and Southern tip of Tiruvannamalai district and enters into Viluppuram District through Tirukoilur taluk. Later, the river flows across Tirukoilur taluk and along the boundary between Viluppuram and Panruti and Cuddalore taluks and enters into the Bay of Bengal, about 5 Kms, north of Cuddalore.

Climate

In 1999-2000, Viluppuram District received 970.9 mm of rainfall as compared to a normal level of 1071.0 mm. The table below gives the actual and normal rainfall in the District during the south west, north east monsoon, winter and hot weather seasons in 1999-2000 (in mm).

Flora and Fauna

There is nothing significant in the flora and fauna of this district. Margosa, Banyan, Palmyra, Coconut, Tamarind, Mango etc., are the common trees found in the district. In the hilly tracts, certain botanically interested varieties of plants are also seen.

Hills

Among the hills of the district, the Kalrayans which runs north to south in the western part of Kallakurichi taluk and spreads into Dharmapuri and Salem districts is an important hill range. The boundary between Viluppuram and the two districts of Dharmapuri and Salem runs through the top of the mountain range. The portion of Kalrayan hills range lying in Viluppuram is approximately 40 Kms in length and 12 to 20 Kms in breadth. The Kalrayan Hills are 2,000 to 3,000 feet high and rise abruptly like a wall shutting of Kallakurichi taluk from the west. The level of the Kalrayan range is generally uniform and at either end of the hills are fertility of the soil, the district is renowned for sugarcane and groundnut cultivation.

Forest

The forest resources of Viluppuram district are very meagre when compared with other districts of the State. Since there are no dense forests in the district, large varieties of wild animals are very rare. Mynas are seen in Kallakurichi, while spotted deer in the Kalrayana and Antelopes are found in both Kallakurichi and Tirukoilur Taluks. Rabbits are seen in many localities. Small birds like partridges and quail are very common in Viluppuram and Tirukoilur taluks. Florican, teal, duck and peafowl are also seen in the district. There is nothing significant in the cattle variety, which is inferior. Two varieties of sheep viz., Sammeri and Kurumba are very common in the district.

Minerals and Mining

Viluppuram District has fairly rich mineral deposits. The geneissiac formations are in evidence in the western part of the district from Thiyagaduram in the south to the Gingee hills in the north. The fossiliferous cretaceous lime-stones are found in Thiruvakkarai near Tindivanam.

Iron ore is also found to occur in small quantities along the banks of Pennar river. Laterite is found over a wide belt of the area between Pondicherry and Ulundurpet in the red soil tract. Lime stone occurs in Ulundurpet in the red soil tract. Lime stone occurs in the neighbouring areas of Tindivanam taluk. Clay deposits are found in large numbers. Magnetic iron ore occurs on the Kalrayan range and in Kallakurichi taluk. It is also found in small quantity in a few other areas of the district. In Kunnam near Tindivanam,

the famous Black Granites are available in plenty are exported mainly to foreign countries.

In Marakkanam near Tindivanam plenty of lime shell deposists which has high chemical grade are found all along the coast. Silica sands of high purity occur as natural sands near Marakkanam. These sands find extensive use in foundaries and also in glass manufacture.

Cropping Pattern

Oil seeds are grown throughout the district. Ground nut, gingly and castor seeds are the main oil seeds cultivated here. The area under cultivation of groundnut was 72,735 hectares followed by gingly with 7,293 hectares during 1998-99. Sugarcane in the district is cultivated to an extent of 35,792 hectares. Other crops grown in Viluppuram are Cashew, Cotton and Tabacco. Cotton is mainly cultivated in Kallakurichi and Sankarapuram taluks while tabacco is grown in Kallakurichi taluks. Jack fruit, Banana and Mango are the important fruits grown in this district.

Details of area under principal crops and production in tonnes in the district during 1998-99 are given below :

Land and land-use pattern

Among the total area of the district, the gross area sown was 4,18,668 hectares and the net area sown was 3,68,838 hectares. Out of the net area sown, 61.2% of area is irrigated by various sources. Roughly, the land use pattern of Viluppuram district other than the net area sown is as follows :

Land and land-use pattern

Classification of land use	Area in hectares
Forest	98,923.0
Total Irrigation	215,631.4

Agriculture

The district occupies an important place in the field of agriculture since it is the mainstay of the people of this district. Paddy is important food crop cultivated over an extent of 1,74,832 hectares in the district during 1998-99. It is cultivated in all taluks and more extensively in Viluppuram and Ulundurpet taluks. Cumbu, Cholam and Ragi are the other important cereals cultivated in this district. Cumbu is the most important dry grain raised over an area of 51,069 hectares, followed by Cholam in 2,188 hectares and Ragi in 2,606 hectares. During 1998-99, nearly 5,836 hectares were used for the production of pulses in the district. Among pulses, black and green grams are the most important varieties grown over an extent of 3,557 and 125 hectares respectively. Other varieties of pulses raised in the district, viz., horsegram and redgram are predominantly cultivated as rainfall crops.

Sericulture

The total area under mulberry cultivation as on 1.4.2000 was120.54 hectares. The area under irrigation was 85.76 hectares and under rain fed was 34.78 hectares. The total production of reeling cocoons was 0.349 MTs, which was valued at Rs. 34.90 lakhs. The production of raw silk in the same year was 0.037 MTs valued at Rs.44.08 lakhs.

Horticulture

The area under fruit trees and vegetables is large in Viluppuram Taluk. In 1998-99, the area under various horticultural crops was as follows :

Horticulture

Crop	Area in Ha.	Production in MT
Banana	1,318	38,629
Turmaric	1,208	4,648
Tapioca	10,280	337,405

Irrigation

Viluppuram district plays a prominent role in the agricultural sector which is mainly due to its irrigation facilities. More than 61% of area sown in the district is under irrigation. The chief source of irrigation in the district is the rivers supplemented by large number of tanks, wells and spring channels. There are 169 canals in the district with a length of 845 Kms. As per the available statistics, there were 162,596 wells used for irrigation purpose. There are 1,982 tanks in the district used for irrigation.

The important irrigation projects in the district are the lower anaicut, Tirukoilur Anaicut, Ellis choultry anaicut and reservoir. During 1998-99, out of the 3,68,838 hectares of net area sown in the district 2,25,885 hectares constituting 61.2 percent were irrigated. The gross area irrigated in the district during the same period was 2,66,406 hectares which works out to 63.6 percent of the gross area sown (4,18,668 hectares).

Major sources of water supply for irrigation in the district are as follows :

Irrigation

Irrigation Source	Number/Length
Canals	196\845
Irrigation Wells	154,184
Tube Wells	22,378
Reservoirs	3
Tanks	2,085

6	Pigs	95,819

In 1999-2000, there were 7 hospitals, 47 dispensaries, 22 mobile dispensaries and 4 mobile unit to take care of the animal population of this District. The total milk production in this District in the year 1999-2000 was 28 tonnes out of which 223.489 tonnes was cow's milk and 65.175 tonnes was buffaloes milk.

Fishery

Viluppuram district with a coast line of about 30 Kms is one of the major fishing centers in the State. Fishermen from 58 coastal villages are engaged in the inland and marine fishing. Very large number of crafts, mechanised boats and catamarans are used for fishing by them. The two important inland fishing centers in the district are the Veeranam tank and the

Vellar. To develop inland fishery fingerlings are stocked in the ponds owned by the Government and supplied to different parts of the district at nominal cost.

There are 53 fishermen co-operative societies in the district. These Societies control the production and marketing of fish for their members and render financial assistance.

Industry

Viluppuram district is one among the industrially backward districts in the State. Sugar Industry is the only major industry in the district. There are 4 Sugar factories located at Mundiampakkam, Moongilthuraipattu, Periyasevali and Kachirapalayam. Besides sugar, chemicals and fertilizers, refines oil, ceramic products and paper are the other major industrial products of Viluppuram district. Quite a large number of small-scale industries are also functioning in this district.

Handloom industry has been a traditional occupation of the people and this industry flourishes mainly in Siruvanthadu, Kudumiankuppam and Pudupalayam. Shirting and lungies are the chief varieties of fabrics woven on handlooms. More than 60 percent of the total looms in the district are within the co-operative fold.

Trade and Commerce

Though Villuppuram district has an intermediary port at Cuddalore, there do not exist much sea borne trade. Urea is imported on a large scale through this port.

Viluppuram is linked with all major cities/towns by well laid roads. The important commodities exported from Viluppuram are sugar and other food products, chemicals and fertilizers etc. Commercial banks play a vital role in promoting trade and commerce in the district. There are 17 regulated markets and one sub-regulated market in the district.

Transport and Communication

Viluppuram is linked with other parts of the state with well laid roads. The district has a well knit road system of 1997.66 kms of surfaced road and 1.000 kms. of unsurfaced road in 1998-99. Of this 1980.64 Kms bituminous type and the remaining 15.3 Kms are water bound macadam type.

Tamil Nadu State Transport Coporation with Headquarters at Viluppuram plays the prominent role in the transport system of Viluppuram. The Corporation mainly covered the entire Viluppuram District and the Southern part of Kancheepuram District.

There were 9,099 commercial vehicles and 53,323 non-commercial vehicles registered in Viluppuram District in 1999-2000. The following table gives the details:

There were 1721 fair price shops in this District, 1579 were full-time and 142 part-time. These are run by the Co-operative Department. This District also has 8 women fair price shops.

Commercial Banks

There were 162 commercial bank branches in this District as on 31.3.1999; 101 were located in rural areas and 61 in semi-urban areas. The deposits as on the same date was Rs.554.85 Crores

Police and Fire station

There were 44 police stations, 3 out posts and 2 all women police stations in this District. There were also 11 fire stations in this District.

Entertainment

The district has 47 permanent cinema theatres, 41 touring theatres besides one drama theatre catering to the entertainment requirements of the people. There is one library in Viluppuram which provides newspapers, magazines, weeklies, novels, etc. to the enthusiastic public of the District.

(v) Census Concepts

Building

A 'Building' is generally a single structure on the ground. Sometimes it is made up of more than one component unit which are used or likely to be used as dwellings (residences) or establishments such as shops, business houses, offices, factories, workshops, worksheds, Schools, places of entertainment, places of worship, godowns, stores etc. It is also possible that building which have component units may be used for a combination of purposes such as shop-cum-residence, workshop-cum-residence, office-cum-residence etc.

Usually a structure will have four walls and a roof. But in some areas the very nature of construction of houses is such that there may not be any wall. Such is the case of conical structures where entrance is also provided but they may not have any walls. Therefore, such of the conical structures are also treated as separate buildings.

Permanent houses

Houses, the walls and roof of which are made of permanent materials. The material of walls can be any one from the following, namely, galvanized iron sheets or other metal sheets, asbestos sheets, burnt bricks, stones or concrete. Roof may be made of from any one of the following materials, namely, tiles, slate, galvanized iron sheets, metal sheets, asbestos sheets, bricks, stones or concrete.

Semi-permanent houses

Houses in which either the wall or the roof is made of permanent material and the other is made of temporary material.

Temporary houses

Houses in which both walls and roof are made of materials, which have to be replaced frequently. Walls may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, plastic, polythene, mud, unburnt bricks or wood. Roof may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, wood, mud, plastic or polythene.

Dwelling Room

A room is treated as a dwelling room if it has walls with a doorway and a roof and should be wide and long enough for a person to sleep in, i.e. it should have a length of not less than 2 meters and a breadth of at least 1.5 meters and a height of 2 meters. A dwelling room would include living room, bedroom, dining room, drawing room, study room, servant's room and other habitable rooms. Kitchen, bathroom, latrine, store room, passageway and verandah which are not normally usable for living are not considered as dwelling rooms. A room, used for multipurpose such as sleeping, sitting, dining, storing, cooking, etc., is regarded as a dwelling room. In a situation where a census house is used as a shop or office., etc., and the household also stays in it then the room is not considered as a dwelling room. But if a garage or servant quarter is used by a servant and if she/ he also lives in it as a separate household then this has been considered as a dwelling room available to the servant's household. Tent or conical shaped hut if used for living by any household is also considered as dwelling room.

A dwelling room, which is shared by more than one household, has not been counted for any of them. If two households have a dwelling room each but in addition also share a common dwelling room, then the common room has not been counted for either of the households.

Census House

A 'census house' is a building or part of a building used or recognised as a separate unit because of having a separate main entrance from the road or common courtyard or staircase, etc. It may be occupied or vacant. It may be used for residential or non- residential purpose or both.

In certain peculiar situations, the manner in which buildings and census houses were identified for numbering in the field by the enumerators is described hereunder:

Sometimes a series of different buildings are found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably, the entire hostel / hotel building was treated as one census house. but if such

built at different times and owned by different persons. In such cases, though the whole structure with all the adjoining units apparently appears to be one building, each portion was treated as a separate building and its constituent units as separate census houses.

On the other hand, one may come across cases, particularly in large cities of multi-storeyed ownership flats. In these cases while the structure looks like one building, different persons own the flats. In case of such multi-storeyed structures, having a number of flats owned by different persons, the entire structure was treated as one building and each flat as a separate census house.

If within a large enclosed area, there are separate buildings owned by different persons then each such building is treated as a separate building. There can be a situation where within an enclosed compound there are separate buildings owned by an undertaking or company or even government that are actually in occupation of different persons. For example, Indian Oil Corporation colony where the buildings are owned by the Corporation but these are in occupation of their employees. Each such building was treated as a separate building. But if in any one of these buildings there were flats in occupation of different households, each such flat was reckoned as a separate census house.

Sometimes it becomes difficult to apply the definition of census house strictly in certain cases. For example, in an urban area, if a flat has five rooms, each room having direct entrance from the common staircase or courtyard. By definition, this has to be treated as five census houses. If all these five rooms are occupied by a single household it was not realistic to treat them as five census houses. In such a case, 'singleness' of use of these rooms along with the main house should be considered and the entire flat was treated as one census house. On the other hand, if two independent households occupy these five rooms, the first household living in 3 rooms and the second household occupying 2 rooms, then considering the use, the first three rooms together were treated as one census house and the remaining rooms as another census house. But if each room was occupied by an independent household, then each such room was treated as a separate census house.

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably; the entire hostel/hotel building was treated as one census house., but if such hostels/ hotels have out-houses or other structures used for different purposes or the same purpose, then each such structure attached to the main hostel/hotel was treated as a separate census house.

In some parts of the country, in rural areas, the pattern of habitation is such that a group of huts, located in a compound, whether enclosed or unenclosed, is occupied by one household. While the main residence may be located in one hut, other huts may be used for sleeping, as a kitchen, bath room, baithak, etc. Though each of the huts was a separates structure, they form a single housing unit and therefore, have to be treated collectively as one building and one census house. If some of the huts are used by one household and the others by a second household as residence, then the two groups of huts were treated as separate census houses. However, if there were also other huts in the compound used for other purposes and not as part of the household's residence such as, cattle shed, workshed, etc., these were treated as separate census houses.

On the other hand, in urban areas, where more than one structure within an enclosed or open compound (premises) belonging to the same person, e.g., the main house, the servant's quarter, the garage, etc., only one building number was given for this group and each of the constituent a separate census house number.

Only cases where a structure with roof and pillars has come up was treated as a building.

Village

The basic unit for rural areas is the revenue village, which has definite surveyed boundaries. The revenue village may comprise of one or more hamlets but the entire village is treated as one unit for presentation of data. In unsurveyed areas, like villages within forest areas, each habitation area with locally recognized boundaries is treated as one village.

Rural-Urban area

The data in tables on Houses, Household Amenities and Assets are presented separately for rural and urban areas. The unit of classification in this regard is 'town' for urban areas and 'village' for rural areas. In the Census of India 2001, the definition of urban area

adopted is as follows:

a) All places with a municipality, corporation, cantonment board or notified town area committee, etc.

b) A place satisfying the following three criteria simultaneously:

   i) A minimum population of 5,000;

   ii) at least 75 per cent of male working population engaged in non-agricultural pursuits; and

   iii) a density of population of at least 400 per sq. km.(1,000 per sq. mile)

For identification of places which would qualify to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population engaged in non-agricultural activity were considered. To work out the proportion of male working population referred to above against b) (ii), the data relating to main workers were taken into account.

Apart from these, the outgrowths (OGs) of cities and towns have also been treated as urban under 'Urban Agglomerations'. Examples of out-growths are railway colonies, university campuses, port areas, military camps, etc., that may have come up near a statutory town or city but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the demographic criteria laid down at (b) above to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the towns as a continuous urban spread. Thus, the town level data, wherever presented, also includes the data for outgrowths of such towns.

City

Towns with population of 100,000 and above are called cities.

Urban Agglomeration

An Urban Agglomeration is a continuous urban spread constituting a town and its adjoining urban outgrowths (OGs) or two or more physically contiguous towns together and any adjoining urban outgrowths of such towns. In some cases, railway colonies, university campuses, port areas, etc., may come up near a city or statutory town outside its statutory limits but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the town as a continuous urban spread.

For the purpose of delineation of Urban Agglomerations during Census of India 2001, following criteria are taken as pre-requisites:

(a) The core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town; and

(b) The total population of all the constituents (i.e., towns and outgrowths) of an Urban Agglomeration should not be less than 20,000 (as per the 1991 Census).

With these two basic criteria having been met, the following are the possible different situations in which Urban Agglomerations would be constituted:

i) a city or town with one or more contiguous outgrowths;

ii) two or more adjoining towns with their outgrowths; and

iii) a city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

Household

A 'household' is usually a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household.Each such person was to be treated as a separate household. The important link in finding out whether it was a household or not was a common kitchen. There may be one member households, two member households or multi-member households.

Institutional Household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. To make the definition more clearly perceptible to the enumerators at the Census 2001, it was specifically mentioned that this category or households would cover only those households where a group of unrelated persons live in an institution and share a common kitchen.

Houseless household

Households who do not live in buildings or census houses but live in the open on roadside, pavements, in hume pipes, under flyovers and staircases, or in the open in places of worship, mandaps, railway platforms, etc., are treated as Houseless Households.

Scheduled Castes and Scheduled Tribes

Article 341 of the Constitution provides that the President may, with respect to any State or Union territory, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of the Constitution be deemed to be Scheduled Castes in relation to that State or Union territory. Article 342 similarly provides for specification of tribes or tribal communities or parts of or groups within tribes or tribal communities which are to be deemed for the purposes of the Constitution to be Scheduled Tribes in relation to the various States and Union territories. In pursuance of these provisions, the list of Scheduled Castes and/or Scheduled Tribes are notified for each State and Union territory and are valid only within the jurisdiction of that State or Union territory and not outside. In September 1956, by an amendment, the Presidential Order of 1950 and in all subsequent Presidential Orders relating to Scheduled Castes, the Hindu and the Sikh religions were placed on the same footing with regard to the specification of Scheduled Castes. Later on, as per the amendment made in the Constitution (Scheduled Castes) Order 1990, the Hindu, the Sikh and the Buddhist were placed on the same footing with regard to the recognition of the Scheduled Castes.

Language and Mother tongue

As per the census concept, each language is a group of mother tongues. The census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf mutes, the language usually spoken by the mother is considered as mother tongue. It is not necessary that the language spoken as mother tongue should have a script. The mother tongues returned by the respondents in census are classified and grouped under appropriate languages according to their linguistic characteristics.

Literate

A person aged 7 years and above who can both read and write with understanding in any language is taken as literate. A person who can only read but cannot write is not literate. It is not necessary that to be considered as literate, a person should have received any formal education or passed any minimum educational standard. Literacy could also have been achieved through adult literacy classes or through any non-formal educational system. People who are blind and can read in Braille are treated as literates.

Literacy rate

Literacy rate of the population is defined as the percentage of literates in the age-group seven years and above. For different age-groups the percentage of literates in that age-group gives the literacy rate.

Educational level

The highest level of education a person has completed.

Work

Work is defined as participation in any economically productive activity with or without compensation, wages or profit. Such participation may be physical and/or mental in nature. Work involves not only actual work but also includes effective supervision and direction of work. It even includes part time help or unpaid work on farm, family enterprise or in any other economic activity. All persons engaged in 'work' as defined above are workers. Persons who are engaged in cultivation or milk production even solely for domestic consumption are also treated as workers.

Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

Main worker

A person who has worked for major part of the reference period (i.e. six months or more during the last one year preceding the date of enumeration) in any economically productive activity is termed as 'Main worker'.

Marginal worker

A person who worked for less than six months of the reference period (i.e. in the last one year preceding the date of enumeration) in any economic activity is termed as 'Marginal worker'.

Non-worker

A person who has not worked at all in any economically productive activity during the reference period (i.e. last one year preceding the date of enumeration) is termed as 'Non worker'.

Cultivator :

For purposes of the Census, a person is classified as cultivator if he or she is engaged in cultivation on land owned or held from government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation.

A person, who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation in exchange of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or

a combination of both (agricultural labourers) is not treated as cultivator.

Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, ground-nuts, tapioca, etc., and pulses, raw jute and kindred fiber crop, cotton, cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops – tea, coffee, rubber, coconut and betel nuts (areca).

Agricultural labourer

A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She/he has no risk in the cultivation, but merely works on another person's land for wages. An agricultural labourer has no right of lease or contract on land on which she/he works.

Household industry worker

Household industry is defined as an industry conducted by the head of the household herself/himself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act and should be engaged in manufacturing, processing, servicing and repairs of goods.

It does not include professions such as a pleader, Doctor, Musician, Dancer, Waterman, Astrologer, Dhobi, Barber, etc. or merely trade or business, even if such professions, trade or services are run at home by members of the household.

Other worker

A person, who has been engaged in some economic activity during the reference period but not as a cultivator or agricultural labourer or in Household Industry, is termed as a 'Other Worker (OW)'. The type of workers that come under this category of 'OW' include all government servants, municipal employees, teachers, factory workers, plantation workers, those engaged in trade, commerce, business, transport, banking, mining, construction, political or social work, priests, entertainment artists, etc. In effect, all those workers other than cultivators or agricultural labourers or household industry workers, are 'Other Workers'.

Work participation rate

Percentage of workers (main + marginal) to total population.

Population density

Population density is the number of persons inhabited per square kilometer of the area.

Age

Age is measured in terms of the completed number of years.

Sex Ratio

Number of females per 1000 males in a population.

(vi) Non-Census Concepts

Improved drinking water

If the household had access to drinking water supplied from a tap, hand pump, tube well or well (protected or covered) situated within or outside the premises, it is considered as having access to improved drinking water.

It may be mentioned that such uniform definition may not be valid across all States.

System of sewerage

Generally, a sewerage system would mean a network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those

carrying both sewage and storm water are called combined sewers. However, in some towns, which are not provided with such underground sewerage system, it is served by open surface drain, box drain, silk pattern drain, etc., in these towns.

Type of latrine and Method of disposal of night soil

There are three prevalent systems of disposal of human wastes, viz. :

(i) underground sewerage,

(ii) sanitary water flush latrines with individual disposal systems, like septic tank, leaching cess pool and collecting well, and

(iii) dry type of latrines with manual scavenging.

the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cistern (or hand flushing). Through this sewer the fecal matter is transported without the need for scavenging. This system generally exists in cities and big towns.

Where the street sewer does not exist, these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Here the liquid wastes from the water closet is disposed of locally in leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil, which renders the harmful liquid bacterially innocuous by the slow process of filtration through the soil traversed.

Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleaned at periodic intervals by a suitable device. The dry type of latrines are of service type latrines from where human excreta is removed by scavengers from house to house, in most cases carrying it on their heads or shoulders or in baskets with handle or wheel barrows. These are then collected in bullock carts or trucks or tractors and trolleys for being carried to the dumping grounds.

Fertility

In demography, the word fertility is used in relation to the actual production of children or occurrence of births specially live births. Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating the number of births to a full or part of the population, such as number of married women or number of women of child-bearing age. The definitions of the terminology used in computing different fertility rates are mentioned below:

Crude birth rate (CBR)

Ratio of the number of live births in a year to the mid year population, normally expressed per 1,000 population.

$$\text{CBR} = \frac{\text{Number of live births during the year}}{\text{Mid–year Population}} \times 1{,}000$$

Crude death rate (CDR)

Ratio of the number of deaths in a year to the mid year population, normally expressed per 1,000 population.

$$\text{CDR} = \frac{\text{Number of deaths during the year}}{\text{Mid-year Population}} \times 1{,}000$$

Natural growth rate

Growth rate is obtained as the difference between crude birth rate and crude death rate in the absence of migration.

Age specific fertility rate (ASFR)

Number of live births in a year to female population in any specified age-group normally expressed per 1,000 women.

$$\text{ASFR} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1{,}000$$

Age specific marital fertility rate (ASMFR)

Number of live births in a year to married female population in any specified age-group normally expressed per 1,000 married women.

$$\text{ASMFR} = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1{,}000$$

General fertility rate (GFR)

Number of live births per 1,000 women in the reproductive age-group (15-49) years in a given year.

$$\text{GFR} = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age-group (15-49) years}} \times 1{,}000$$

General marital fertility rate (GMFR)

Number of live births per 1,000 married women in reproductive age-group (15-49) years in a given year.

$$\text{GMFR} = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) years}} \times 1{,}000$$

Total fertility rate (TFR)

It is obtained as the total of the age specific fertility rates (number of children born per woman of the particular age) for the entire reproductive age span. It provides the average number of children that will be born to a woman under the fertility levels indicated by the age specific fertility rates assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TFR} = \frac{5 \times \sum^{45\text{-}49}\text{ASFR}_{15\text{-}19}}{1{,}000}$$

Total marital fertility rate (TMFR)

Average number of children that would be born to a married woman if she experiences the current fertility pattern throughout her reproductive span (15-49) years assuming that there is no mortality of women till the completion of reproductive period.

$$\text{TMFR} = \frac{5 \times \sum^{45\text{-}49}\text{ASMFR}_{15\text{-}19}}{1{,}000}$$

Age-specific mortality rate (ASMR)

Number of deaths in a particular age and sex group per 1000 population of the same age-group.

$$\text{ASMR} = \frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of the same age-group}} \times 1{,}000$$

q1

Probability of dying between birth and age 1. This can be used as approximate value of Infant Mortality Rate (IMR) which gives the ratio of number of deaths in a year of children aged less than one year to the number of births in that year.

q2

Probability of dying between birth and age 2.

q5 :

Probability of dying between birth and age 5. This indicator is also known as Under Five Mortality Rate (U5MR).

Infant mortality rate (IMR)

Ratio of the number of infant deaths (deaths of children below one year) in a year to the number of live births in that year.

$$\text{IMR} = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Infant mortality rate comprises of two parts, viz., Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz., Early neo-natal mortality rate and late neo-natal mortality rate. These are defined as:

Neo-natal mortality rate (NMR)

Number of infants dying within the first month of life (28 days or under) in a year per 1,000 live births of the same year.

$$\text{NMR} = \frac{\text{Number of infant deaths aged 28 days or under during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

i) Early neo- natal mortality rate

$$= \frac{\text{Number of infant deaths of less than 7 days during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

ii) Late neo-natal mortality rate

$$= \frac{\text{Number of infant deaths of 7 days to less than 29 days during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Post neo-natal mortality rate (PNMR)

$$= \frac{\text{Number of deaths of 29 days to less than One year during the year}}{\text{Number of live births during the year}} \times 1{,}000$$

Peri-natal mortality rate (PMR)

Number of still births plus deaths within 1st week of delivery per 1000 births in a year.

$$\text{PMR} = \frac{\text{Number of still births and infant deaths of less than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1{,}000$$

Still birth rate (SBR)

$$= \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1{,}000$$

Maternal mortality rate (MMR)

Number of deaths of women in the age-group 15-49 while pregnant or within 42 days of termination of pregnancy from any cause related to pregnancy and child birth per 1,00,000 live births in a given year.

$$\text{MMR} = \frac{\text{Number of maternal deaths to women in the age group 15-49}}{\text{Number of live birth}} \times 1{,}00{,}000$$

Eligible couple (Couples per 1,000 population)

Number of currently married females in the age-group 15-44 years per 1000 persons of all ages.

Child woman ratio (0-4)

1. Number of children in the age-group 0-4 years per 1000 women in the age-group 15-49 years.

Child woman ratio (5-9)

2. Number of children in the age-group 5-9 years per 1000 women in the age-group 15-49 years.

Migration, Internal and International migration, Impact of migration.

Migration

Migration is the third component of population change, the other two being mortality and fertility. A person is considered as a migrant by place of birth if the place in which he is enumerated during the Census is other than the place of his birth. Similarly a person is considered as a migrant by place of last residence if the place in which he is enumerated

during the Census is other than his place of immediate last residence. By capturing the last of the migrations in cases where persons have migrated more than once, this concept would give a better picture of current migration scenarios.

Internal And International Migration

The migrational movements are of three types (i) Migration within the state itself with its components (a) Migration within the district of enumeration (intra district migration) (b) Migration from one district of state to another district of state (interdistrict migration) (ii) Migration from one state to another state of the country interstate migration (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration.

Impact of Migration

As in 1991 and 2001 Census, like previous Censuses, had collected migration details for each individual by place of birth and last residence. Data on last residence along with details like duration of stay in the current residence and reason for migration provides useful insights for studying migration dynamics of population.

Civic status of urban units

Civic Status of a town/city is determined on the basis of Civic Administrative authority of the town e.g., Municipal Corporation/Corporation, Municipal Committee/Municipal council, Municipality etc.

Size class of UA / town

Size-class of UA / Town is based on the population. UAs / Towns with 100,000 and above population are classified as Class I UAs/Towns. These Class I UAs./ Towns are now further sub classified into seven sub classes namely M1 to M7 depending on the population size of UA/City/Town. These are :

M7 (5,000,000 and above);

M6 (2,000,000 to 4,999,999);

M5 (1,000,000-1,999,999);

M4 (500,000-999,999);

M3 (300,000-499,999);

M2 (200,000-299,999); and

M1 (100,000-199,999).

Towns with 50,000 to 99,999 population are classified as Class II towns, 20,000 to 49,999 population are Class III towns, population with 10,000-19,999 are Class IV towns, population with 5,000 and 9,999 are Class V towns and towns with less than 5,000 population are Class VI towns.

Slum area

The Slum Areas (Improvement and Clearance) Act, 1956, which was enacted by the Central Government defined slums as:

a) Areas where buildings are in any respect unfit for human habitation; or

b) are by reasons of dilapidation, overcrowding, fault arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light or sanitation facilities, or any combination of these factors, are detrimental to safety, health or morals.

Mega city

The concept of 'Mega city' is a recent phenomenon in the Urban Sociology and is defined in term of metropolitan city in the form of large size, problem of management of civic amenities and capacity to absorb the relatively high growth of population. Indian Census in 1991 treated the population size of 5 million and above as the cut off point to identify a place as the mega city. Whereas, for the purpose of inclusion in Centrally Sponsored Scheme for Infrastructure Development in Mega cities the Ministry of Urban Affairs and employment, Department of Urban Development adopted the criteria of 4 million and above population as per 1991 Census for Mega Cities. In 2001 Census, cities with 10 millions and above population have been treated as Mega cities.

(vii) CENSUS 2001 FINDINGS

Census taking is a massive operation carried out in a short span of time with the active participation of a veritable army of enumerators. The reference moment for the 2001 Census is the midnight of 28th February, 2001 i.e. the Census provides a snapshot of the population of the country, as it existed at the midnight of 28th February, 2001. Actual enumeration was spread over a period of 20 days from 9th to 28th February, 2001 followed by revisional round up to 5th March, 2001 for up dating of the population figures with reference to the mid night of 28th February, 2001. Household Schedule was canvassed by the enumerator and with a view to ensuring uniformity in approach in understanding the various concepts and in proper eliciting and recording of the information, the enumerators and supervisors were imparted both theoretical as well as practical training intensively in 3 rounds.

As a prelude to the actual census the urban and rural areas were identified and listed out in respect of each administrative unit. The Directorate of Census Operations had prepared the list of urban areas and simultaneously, a list of villages. These lists formed the basic frame for the organization of the Census Operations. Thereafter, geographical areas that could be conveniently covered by each enumerator were carefully carved out to constitute the enumerator's block (EB).

The second major step was the house listing operation, which was carried out in this district during April, 2000. Thereafter, in order to adhere to the prescribed workload norms the actual Census enumerator's blocks were carefully, demarcated on the basis of the house list population and the layout sketches and notional maps prepareD for the house listing operation. House listing operation was also utilized to collect wealth of information on items such as predominant material used for construction of houses, amenities available to the census households, number of living rooms etc.

DISTRIBUTION OF POPULATION IN RURAL AND URBAN AREAS

In 2001**,** the total population of Viluppuram district was 29,60,373, the rural with 25,33,456 and urban with 4,26,917. In 1991, there were 27,55,674, 25,33,456 and 2,06,463 respectively.

* Based on the improved drinking water source, drinking water supply has been classified as 'Improved ' or otherwise. If the household has access to drinking water supplied from a tap or a hand pump / tube well situated within or outside the premises it is considered as having access to 'Improved drinking water source'. However, the concept of improved drinking water is state specific and this is to be considered accordingly.

Post office includes Post office, telegraph office and Post and telegraph office.

$ Transport communication includes bus service, rail facility and navigable waterways.

This table shows the distribution of villages according to availability of different amenities in C.D.Blocks. Out of 1430 inhabited villages in the district, education is available to 1316 villages (92.0%) medical to 968 villages (67.7%), drinking water to 1429 villages (99.9%), Post office to 1163 villages (81.3%), Telephone to 819 Villages (57.3%), Transport and Communication to 1205 villages (84.3%), Banks to only 160 Villages (11.2%), agricultural credit societies to 222 villages (15.5%), approach by pucca road to 1319 villages (92.2%) and power supply to 1424 villages (99.6%). Rishivandiyam C.D.Block has got cent per cent availability of the following amenities namely education, medical, drinking water, postoffice, approach by pucca road and power supply.

It can be seen from the above table that firewood is the main source of fuel used for cooking followed by cooking gas (L.P.G) and Kerosene. Crop residue is the least used for cooking firewood is the main source of fuel used for cooking in Rural areas than Urban areas. Likewise Crop residue is used as fuel for cooking in rural areas. Cooking gas (L.P.G) is used as fuel for cooking largely in Urban areas that of rural areas. Likewise Kerosene is used as fuel for cooking largely in Urban areas when compared to rural areas. The households using the rest namely cowdung cake, electriciy, coal/lignite, bio-gas and others as fuel for cooking are very meagre.

The number of households availing banking services and assets in each households in the district has been provided in this table.

(ix) Major social and cultural events natural and administrative developments and significant activities during the decade.

A few social welfare schemes are being implemented in this district, the old age pension, aid to pregnant women, aid for poor women marriage, aid to handicaped persons schemes being implemented. Samathuvapuram scheme was initiated for the habitation to all community at one place.

x) Brief description of places of religious, historical or archaeological importance in villages and places of tourist interest in the towns of the district.

Viluppuram district was earlier a part of Cuddalore district. It was then bifurcated from Cuddalore and became a separate district on 30th September 1993. Because of this, the history of Viluppuram district closely resembles that of Cuddalore.

The Cholas were the early rulers. Among these rulers, Karikala Chola was the most famous and powerful. For a short period, the Cholas were overthrown by Simha Vishnu Pallava and the Region came under the Pallava rule for sometime. Vijayalaya Chola again revived Chola rule. This was the beginning of great Chola Empire. The later Chola rulers were weak and the power passed on to the hands of Eastern Chalukyas.

Cholas regained their lost position but with the rise of Jatavarman Sundara Pandya-1 (1251 A.D.), Chola supremacy came to an end. The sway of Pandyas lasted for over 50 years, followed by Muslim domination from 1334 to 1378 A.D. By 1378, the region came under the rule of Vijayanagar Kingdom and Nayaks were appointed as the rulers of the region.

In 1677, Shivaji took Ginjee area with the assistance of Golkonda forces. Then came the Mughals. During the Mughal regime, both the English and French acquired settlements in South Arcot. During the Anglo-French rivalry, the entire district was turned into a war land. After sometime, the entire area came under the control of East India Company. It remained under British authority till 1947 when India became independent.

Tourist Places

The Viluppuram district has lot of tourist places, which are more than 100 years old. The district has temples, mosques and churches, which are very old and famous.

Gingee Fort

The forts are located on either side of the road to T.V.Malai. They are open from 8.00 hours to 17.00 hours. Any assistance can be sought at eh ASI office or the ticket counter.

Fortification Walls

The massive fortification walls of Gingee interconnect the three inaccessible hills Krishnagiri, Chakkilidrug and Rajagiri. The three hills are disposted in the form of triangle, while the main wall connecting them is 20 meters thick. The tops of the three hills form impregnable citadels, while the inner fort contains many fortifications and gates. The Rajagiri citadel is the highest, about 800 ft. in height, and the most inaccessible. The 20 metres deep chasm is now connected by a bridge.

Kalyana Mahal

Built in the Indo-Islamic style, the Kalyana Mahal is one of the most attractive ruins in the fort. It consists of a square court, surrounded by rooms for the ladies of the Governors household. In the middle of this court, is a 27 meters high square tower, built of stone. The tower has a pyramidal roof. The rooms in this tower are very similar to Vijayanagar Nayaka buildings elsewhere.

Venugopala Swamy Temple

Located to the west of the inner gate of the lower citadel, the temple contains a remarkable sculpture depicting Lord Krishna playing on the flute with is two consorts. Anorther interesting feature in this temple is a finely polished, broadsmooth slab found in front of the temple.

The Ponds

The way to the Hanuman Temple, outside the lower fort, abounds in temple ponds and many impressive structures. Chakkarakulam and chettikulam are the two famous ponds in this fort. Chettikulam was built by Raja Shetty during the

Maratha occupation of the place, towards the end of the 18th century. To the north of this pond is a platform believed to be Raja Desingh funeral pyre, where his young wife committed sati.

Ranganatha Temple

Built in typical Indo-Islamic style, the Audience hall is a damaged roof supported by a series of graceful little pointed arches. The Magazine building is also a noteworthy structure. Built in typical Vijayanagar style, is the famous Ranganatha Temple. To the south of the watch-tower, is a big iron cannon, roughly 4 meters long, and 2 metrs in circumference. In style and form, this cannon is very similar to the Malik-1-Maidan of Bijapur.

Sad-at-Ullah Khan Mosque

This mosque was erected by Sad-at Ullah Khan to commemorate his victory over Desingh and the capture of the fort in 1713 A.D. It is located at the entrance of the inner fort of Rajagiri. According to a Persian inscription found here, the mosque is said to been constructed during 1717-1718 A.D.

Kamalakkanni Amman Temple

This small shrine dedicated to Kamalakkani Amman (Goddess Durga), a local deity, is found on the way to the citadel on Rajagiri Hill. It contains a sacrificial altar and well-preserved mural paintings belonging to the Nayak period.

Thiruvaamathoor

An ancient 1500 years old Chola temple dedicated to lord Sri Abiramaeshwarar is found here. As the temple seems to have changed many hands many times between Rajaraja Chola 1 (AD 985-1012) and Seerangadeva Maharayar (1584 A.D.). The amman named Muththambigai.

Thumpoor

The temple of Lord Nagamman. This temple is 1450 years old.

Esalam

Built by Rajendra Cholan 1 (1012) Lord Sri Ramanatha Eswarar. The legend found in Sanskrit language and in grantha character. Written on the periphery of the seal is as follow, Rajad-rajanya Makuta sreni-ratnesu sasanam Etad Rajendra cholasya parakesari varmanah.

Shrine dedicated to Kamalakkani Amman (Goddess Durga), a local deity, is found on the way to the citadel on Rajagiri Hill. It contains a sacrificial altar and well-preserved mural paintings belonging to the Nayak period.

Ennairam

The Chola temple of Narasimma Swamy Koil built by Rajaraja Chola 1 (985-1014). 8,000 samanaras were lived in this village. Another temple Narchimma Perumal Koil found here.

Thalavanur

Shatru Malleswaralayam – Rock cut temple built by the Pallava King Mahendra Varman (B.C. 580 to 630). Sculptures and Tamil and Sanskrit inscriptions are found here.

Pachchaiamman Temple

This temple was worshipped by special chittars. 7 Jadamuni shapes are very big pachaimalai is in the backside. Medicine plants are there. This medicine can't find even in the kollimalai. Purathana temple is on the top, no statue there. We can see the Thiruvannamalai tower standing in the half of this mountain.

24 Theerthangarargal

Samanar Rock cut temple on a Cone Shape Rock. 24 Theerthangarargal Statue is found only in Gingee.

Melmalayanur

The temple of Angala Parameswari is situated here. In the inner sanctum there is a snake pit, which is being worshipped. There is a congregation of devotees on every new moon day.

Singavaram

The temple of Lord Ranganatha, the tutelary god of Raja Desingh is on a hill top. It is a good specimen of South Indian type of rock – cut shrine. The idol of Lord Ranganatha, in a reclining posture, measures 24 ft in length, which together with the inner sanctorum, is carved out of a single rock. It is said to be bigger than that of Theidol in Srirangam.

Venkataramana Temple

This sprawing temple, with its striking sculptures and carved pillars, narrates the aesthetic skills of the Nayaka dynasty. Built by Muthialu Nayaka (1540 – 1550 A.D.) This is the largest temple of Gingee in the later Vijayanagar period. The temple abounds in gopuras, mandapas and sculptured panels depicting gods and goddesses in scenes from the Hindu epics. Many Tamil inscriptions are also found in the walls of the Mandapas. The temple seems to have faced hard times during the French occupation (after 1761 A.D.) From this period the temple experienced forms of decay and old archaeological wealth was plundered by subsequent invaders.

Krishnagiri

This is a small hill made up of granite boulders, located to the north of Rajagiri on the main road from Gingee to Tiruvannamalai. The citadel on this hill can be reached by climbing a flight of steps over a steep slope. Within the citadel are two stone-built granaries, a pillared hall, two temples and an edifice built of brick and mortar known as the Audience Chamber.

Melnaariyappanoor Church

The 100 years old famous Church is situated in Chennai – Salem highway, 8 km from Chinna Salem. This Church is constructed by Kunchaan, a devotee of St. Anthoniyar.

xi) Major characteristics of the district, contribution of the district in the form of any historical figure associated with the district

By 1378 A.D.Viluppuram came under the rule of Vijayanagar Kingdom and petty Chieftains called Nayakas, were appointed to rule the region. By about 1610, Gingee which comprised of almost the whole of Viluppuram district fell to Muslims for a while. Later, the forces of Bijapur took Gingee from the Golkonda army and from 1648 to 1677 Viluppuram was under the control of Bijapur generals. In 1677, Shivaji took Gingee area with the assistance of Golkonds forces. In 1680 Harji, The Maratha Chief of Gingee area not only asserted his individual position, but also encouraged the British to settle down in his territory which caused the establishment of certain factories at Cuddalore, Poro-Novo, etc.

After the death of Harji, the fort near Tindivanam fell into the hands of Mughals in 1694. The Mughal emperor Aurangazeb had an eye on Gingee and after prolonged fighting the Gingee fort was stormed in 1697 by Zulfikar Khan and it fell into the hands of the Mughals in 1698. Subsequent history was marked by group rivalries of the Nawas of Arcot, the Nizam and the two foreign powers – the British and the French. For a brief period, one Sadat – Ullah Khan held sway over Gingee from 1714 onwards. His nephew, Dost Ali, Succeeded him on his death. His two sons Safdar Ali and Hasan Ali were set against each other and in 1740 Safadar Ali assumed office as Nawab of the carnatic when Dost Ali and his son Hasan Ali were killed by the Marathas. In 1743, Anwaruddin was installed as Nawab by the Nizam, During the Mughal regime, both the English and French acquired settlements in Viluppuram for their trading purposes. During the Anglo-French rivalry, Viluppuram was turned into a cockpit of war.

After severe fighting, Gingee fell into the hands of British in 1760. During the years 1743 – 95 when Mohammed Ali was the carnatic Nawab, Viluppuram regions were administered by Managers appointed by him. In 1774, the Nawab leased out the district as a whole for fabulous rent. Whenever the district was under assignment to the East India Company for payment of Nawab's debts.it was administered by British Officials. In due course, the Nawab had become completely dependent on the Company for financial as well as military aid. After the death of Mohammed Ali, the Company insisted on the surrender of the districts of carnatic region in lieu of payments due from the Nawab towards the maintenance expenses of the troops of the company in carnatic. The East India Company entered into an agreement with Azeemud-Daulat, son of Ammer-ul-umrah in 1801. According to which he was recognised as the Nawab of carnatic and he gave up his claims over the carnatic regions. Thus, by virtue of that agreement of 1801, Viluppuram along with other regions of the carnatic passed into the hands of the East India Company.

From that date onwards, Viluppuram had remained under British authority till 1947 when the country became independent.

(xii) Scope of Village and Town Directory

Village Directory

The "Village Directory" is one of the traditional compilations of the Census. It gives the list of Revenue villages, their location numbers, their area, population, number of households, amenities such as educational, medical, drinking water, post and telegraph, commercial and co-operative banks, agricultural, non-agricultural and other credit societies, recreational and cultural facilities, communication, approach to village, nearest town with distance, power supply, availability of newspaper and magazines, most important commodity manufactured and land use of each village. PRIMARY CENSUS ABSTRACT

BLANK

Brief note on Primary Census Abstract

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another.

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5,463 sub-districts, 5161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars; Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation**.** The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration. The Schedules for both the phases were scanned through high speed scanners in fifteen data centres across the country and hand-written data from the schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing. The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million schedules consisting of about 1028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain. This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rural areas and the ward level in the urban areas. Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use. The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and their senior officers were required to make detailed

presentations of data for their own state both in respect to the quality and the coverage and only after the full possible satisfaction of the TFQA, the population data was cleared.

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population. In the earlier censuses, the total Scheduled Castes and Scheduled Tribes population were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual. Two Special Task Forces, one on Religion and the other on Scheduled Castes/Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses.

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge. The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encountered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature. Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels.

The entire work relating to the data validation and scrutiny was completed by all the States/Union territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division.

Primary Census Abstract

The Primary Census Abstract which is yet another important publication of 2001 census gives basic information on Area, Total Households, Total Population, Scheduled Castes, Scheduled Tribes Population, Population in the age group 0-6, Literates, Main workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural laborers, (iii) Household Industry Workers, and (iv) Other Workers and also Non-workers. The characteristics of the Total Population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless population and are presented by sex and rural-urban residence. This data is presented at different levels, namely, India, States/ Union territories, Districts and Cities, Urban Agglomerations (Population 1,00,000 and above) in three different tables. In addition, the Appendix of said publication provides Houseless and Institutional Households and their population by residence and sex for 2001 for India, State and Union territory.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census Abstract. This practice was continued in 1991 also. In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and in its place, four-fold industrial classification of both 'main workers' and 'marginal workers' are included. In 1981 census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis of literacy data.

The data in the Primary Census Abstracts are presented at different levels, The District Primary Census Abstract is presented at District/ C D block/ UA/City/Town, Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented at District/C D block/ Town, Village Primary Census Abstract is presented villagewise for each C D block and Urban Primary Census Abstract at Town/Ward***** level. The Primary Census Abstract data for each of these characteristics is presented by sex and rural-urban residence.

The District Primary Census Abstract has been presented in 59 columns, Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes has been presented in 52 columns, Village Primary Census Abstract and Urban Primary Census Abstract has been presented in 58 columns. The information on each village under a C D block are presented in the Village Primary Census Abstract and each of the wards under a town has been provided in the Urban Primary Census Abstract exist in the district. The Data was presented for villages C D block-wise for the first time in 1991 Census. This practice is continued in 2001 Census also.

The concepts and definitions used in the column heading are already explained under the sub heading 'Census concepts' in the Analytical note. The Total population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts is as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tahasils, P.Ss and by the local bodies in respect of towns are given in sq.kms. The area figures of the villages supplied by the Tahasildars in acres have been converted and shown in hectares. The area figures of the C D block is the total of the village areas coming under each C D block. The area figures for the district supplied by the Surveyor General of India have been adopted to maintain uniformity at the national level. The total area figures of all the Tahsils/C D blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of P.S./Tahsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tahsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different levels.

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on total population, Scheduled Castes population and Scheduled Tribes population for each town.

ANNEXURE II

FERTILITY AND MORTALITY MEASURES

FERTILITY LEVELS

In demography, the word fertility is used in relation to the actual production of children or "occurrence of births specially live birth". Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating number of births to size of some section of the population, such as number of married couples or number of women of child bearing age.

In other words, it is a major component of population growth. In the 1991 Census, questions of fertility related to age at marriage, number of surviving children at present, number of children ever born alive and children born alive during the last one year were asked. The first three questions were asked to all every married women and the last question related to currently married women. In 2001 Census, these information were gathered. However, these are not available readily.

SELECTED INDICATORS ON FEMALE NUPTIALITY, 1991

State / District	Total/ Rural/ Urban	Mean age at marriage of currently married women			Percentage of currently married women with age at marriage below 18		
			Who married during			Who married during	
		Total	1981-86	1986-91	Total	1981-86	1986-91
Tamil-Nadu	T	19.1	19.3	19.7	31.6	28.2	24.5
	R	19.0	19.1	19.3	32.2	30.2	27.8
	U	19.3	19.7	20.3	30.4	24.4	18.6
Villupuram	T	18.6	18.7	18.9	38.7	35.3	33.3
	R	18.5	18.7	18.7	39.1	36.0	35.2
	U	18.9	19.2	19.9	36.7	31.7	23.5

Note : Villupuram was a composite district of Cuddalore in 1991

It is observed from the above table that the mean age at marriage of currently married females in Villupuram / Cuddalore Districts was 18.55 years in 1991, lower than the corresponding State level of 19.12 years. In the rural areas also, same trend was observed in the district data when compared with those of the corresponding state data in the above table. The mean age at marriage of the currently married females has increased by about 0.19 from 18.74 years who married during 1981 - 86 to 18.93 years who married during 1986 - 91 in the district as is evident from the above table.

Presently, the statutory minimum age at marriage for females is 18 years. It is worth examining the proportion of the currently married females whose age at marriage was below this limit during the periods 1981 - 86 and 1986 - 91. It is observed from the table that this proportion has decreased from 35.33% during 1981 - 86 to 33.33% in 1986 - 91 in the districts. Same trend was observed in case of rural and urban areas also.

CHILD MORTALITY LEVELS

The estimates presented here have been obtained using the data on the number of children ever born and number of children surviving to every married women. Information on questions on children ever born and children surviving canvassed for all every married women have been tabulated by age of the mother. From this, estimates of child mortality (qi) have been worked out using Brass technique, where q (i) is the probability of a newborn child dying before age (i) = 1, 2, 3 and 5.

It is observed from the below table that the child mortality estimates in the district and the state has decreased in 1991 when compared to those in 1981.

ESTIMATES OF CHILD MORTALITY INDICATORS BY SEX

ANNEXURE III

VARIOUS MEASURES OF FERTILITY AND MEAN AGE AT MARRIAGE

The measures of fertility worked out are based on the F - series tables of 1991 Census pertaining to Tamil Nadu State and the district defined as below: -

ESTIMATES OF FERTILITY INDICATORS

Serial Number	State / District	Year	CBR	TFR	TMFR	GFR	GMFR
1	Tamil Nadu	1981	32.0	3.9	5.5	123	169
		1991	26.4	3.1	4.8	99	136
2	Villupuram	1981	34.9	4.4	5.6	139	178
		1991	27.5	3.4	4.8	107	140

Source: Occassional paper No. 1 of 1997 RGI

The values of CBR, TFR, TMFR, GFR and GMFR are presented separately for Tamil Nadu and Villupuram / Cuddalore Districts in the above table. These values can be compared for 1981 and 1991 Censuses. The table shows that in Villupuram / Cuddalore Districts, all the above mentioned rates from 1981 to 1991 have declined. Similar trend was observed in Tamil Nadu Sate also. On comparing the district level data with the State level data in the above table, it is observed that all the above mentioned rates at the district level are higher than those at the State level .

Different fertility measures indicate that mostly all the fertility levels in the district were lower compared to the state average during 1991. This is duly supported by the higher age at marriage of females in the district, compared to the state as is evident from the above table. The above table presenting the female age at marriage relates to all women who are living with their husbands. Some of them might be recently married and some of them decades ago. In view of this, the figures mentioned in the table should be regarded as indicating the situation for the population as a whole.

IMPORTANT INDICES OF FERTILITY

Fertility Indices	Villupuram			Tamil Nadu		
	Total	Rural	Urban	Total	Rural	Urban
Number of children ever born per ever married women in age group 45 - 49	3.6	3.6	3.6	3.4	3.4	3.6
Child - women ratio (0-4 years)	408	426	321	348	369	311
Child - women ratio (5-9 years)	514	530	435	447	462	418

One of the most useful indices that can be derived from the question on number of children born alive is the average number of children ever born alive per ever married women by age - group. Since most of the women complete their reproduction in the age - group 45 - 49, the average number of children ever born per every married women in the age - group 45 - 49 is termed as an index of completed level of fertility. Ever married include widows, divorced and separated women.

In the above table, average number of children born per every married women in the age group 45 - 49 in 1991 has been presented for total, rural and urban areas for Villupuram / Cuddalore Districts and Tamil Nadu state. It is observed from the above table that the number of children ever born per every married women in rural and urban areas of Villupuram / Cuddalore Districts is almost same.

Child - women ratio, a relative measure is calculated to know the fertility performance of women. It is seen from the above table that child - women ratio in rural areas is higher than urban areas of Villupuram / Cuddalore Districts and same trend was observed in State level also.

ANNEXURE IV

MIGRATION

Migration is the third component of population change, the other two being mortality and fertility. A person is considered as a migrant by place of birth if the place in which he is enumerated during the Census is other than the place of his birth. Similarly, a person is considered as a migrant by place of last residence if the place in which he is enumerated during the Census is other than his place of immediate last residence.

INTERNAL AND INTERNATIONAL MIGRATION

The migrational movements are of three types; (i) Migration within the state itself with its components: (a) Migration within the district of enumeration (intra district migration), (b) Migration from one district of state to another district of state (interdistrict migration), (ii) Migration from one state to another state of the country interstate migration and (iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration.

REASONS OF MIGRATION

As in 1991 Census, the reasons for migration were elicited in 2001 Census also. The reasons for migration were broadly categorized as (i) employment / work, (ii) Business, (iii) Education, (iv) Marriage, (v) Moved after birth, (vi) Moved with household and (vii) Any other reason. Reasons for migration has been elicited only with reference to movement from place of last residence.

IMPACT OF MIGRATION

Growth of population of a particular place depends upon natural increase due to excess of births over deaths and migration. Knowledge of trends in migration helps in future planning of a region.

The above table explains by comparison between 1991 and 2001 census data on migrant population by place of birth. It reveals that 20.1% (2001 census) migrants were born elsewhere in the district of enumeration but within the State. While 3.9% were born in other districts of the State. There were migrants (1.2%) also from other areas beyond the State of enumeration.

ANNEXURE VI

MARITAL STATUS OF POPULATION

Marital status is defined as under :

Never married : A person who has never been married at any time before

Married / currently married : A person whose marriage is subsisting with spouse living. It may be the first or subsequent marriage of either of the persons. Persons who are recognized by custom or society as married and persons in stable defacto union are also considered as married.

Widowed : A person whose spouse is dead and who has not been married again.

Divorced or separated : A person who has been separated from the spouse and is living apart with no apparent intention of living together again or who has been divorced either by decree of a law court or by accepted social religious custom but who has not been re - married.

SEX-WISE PERCENTAGE DISTRIBUTION OF MARITAL STATUS IN THE DISTRICT

Census Year	Sex	Never married	Married	Widowed	Divorced / Seperated	Unspecified
2001	M	50.4	47.4	2.0	0.2	0.0
	F	39.5	50.1	9.6	0.8	0.0
1991	M	52.3	45.5	2.0	0.2	0.0
	F	42.0	48.5	8.9	0.6	0.0

From the above table it is clear that never married among the males were more than that of females during 2001 census. Similar is the case in 1991 Census also as 52.3% males and 42.0% females are unmarried. Contrary to this is the other status like married, widowed and divorced/separted where females are higher than the males.

ANNEXURE VII

ANNEXURE VIII

DISTRIBUTION OF DIFFERENT MOTHERTONGUES RETURNED

MOTHER TONGUE

The definition of mother tongue used in 2001 Census is same as in 1991 Census. "Mother Tongue is the language spoken in childhood by the person's mother to the person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf means the language usually spoken by the mother should be recorded".

As per the Census concept, each language is a group of mother tongues. The Census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the person. There are 18 languages included in the Eighth Schedule to the Constitution of India (Scheduled Languages).
