PART-B
PRIMARY CENSUS ABSTRACT

Brief note on Primary Census Abstract

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5,463 sub-districts, 5,161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars, Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation . The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration The Census Schedules for both the phases were scanned through high speed scanners in fifteen data centers across the country and hand-written data from the Schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million Schedules consisting of about 1,028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rura areas and the ward level in the urban areas Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and their senior officers were required to make detailed presentations of data for their own state both in respect to the

quality and the coverage and only after the full possible cleared

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population In the earlier censuses, the total Scheduled Castes and Scheduled Tribes population were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual Two Special Task Forces, one on Religion and the other on Scheduled Castes/ Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encoun-tered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels

The entire work relating to the data validation and scrutiny was completed by all the States/Union Territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division

Primary Census Abstract

The Primary Census Abstract which is yet another important publication of 2001 Census gives basic information on Area, Total Households, Total population, Scheduled Castes, Scheduled Tribes population, Population in the age group 0-6, Literates, Main workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural labourers, (iii) Household Industry Workers, and (iv) Other workers and also Non-workers. The characteristics of the Total Population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless population are presented by sex and rural-urban residence. This data is presented at different levels, namely, India, States/Union Territories, Districts and Cities, Urban Agglomerations (Population 1,00,000 and above) in three different tables In addition, the Appendix of said publication provides Houseless and Institutional Households and their population by residence and sex for 2001 for India, State and Union Territory.

Apart from the India and State/Union Territory volumes for Primary Census Abstract, the District Census Handbook contains District Primary Census Abstract, Appendix to District Primary Census Abstract, Primary Census Abstract for Scheduled Castes, Primary Census Abstract for Scheduled Tribes, Village Primary Census Abstract and Urban Primary Census Abstract of the concerned district in the state.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census Abstract. This practice was continued in 1991 also In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and its place, four-fold industrial classification of both 'main workers' and 'marginal workers' are included In 1981 Census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 Census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis and understanding of this literacy data.

Level of presentation in District Census Handbooks:

The Primary Census Abstract data in different PCAs are presented at different levels. The level of presentation of Primary Census Abstracts are as under.

	Name of the Primary Census Abstract	Level of presentation
1.	District Primary Census Abstract	District/CD Block/UA/City/Town
2.	Primary Census Abstract for Scheduled Castes	District/CD Block/Town
3	Primary Census Abstract for Scheduled Tribes	District/CD Block/Town
4	Village Primary Census Abstract	CD Block/Village wise
5.	Urban Primary Census Abstract	Town/Ward level

The PCA Data for villages was presented CD Block wise for the first time in 1991 Census. This practice is continued in 2001 Census also. The data for each CD Block is presented both for rural and urban areas separately All the villages within the CD Block constitute the rural portion and the Census Towns and Outgrowths are shown under the urban portion of the CD Block. In case a CD Block is spread over two or more districts, than portion which falls within the district is presented, the data pertaining to remaining portion of the CD Block is presented in the concerned District Census Handbook The data in the Urban Primary Census Abstract for each town as well as for town with outgrowths in the district are presented The data for all the wards and the outgrowths of the town(s) are also presented separately below the concerned town(s)

The District Primary Census Abstract is presented in 59 columns The Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented in 52 columns. The Village Primary Census Abstract and Urban Primary Census Abstract are presented in 58 columns

The concepts and definitions used in the column heading are explained under the sub heading 'Census Concepts' in the Analytical Note. The term 'Total Population' includes the Scheduled Castes, the Scheduled Tribes, the Institutional and the Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts are as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tehsils, Police Stations and by the local bodies in respect of towns are given in square kilometres. The area figures of the villages supplied by the Tehsildars in acres have been converted and shown in hectares. The area figures of the CD Block is the total of the village areas coming under each CD Block. The area figures for the district are the same as adopted by the Surveyor General of India to maintain uniformity at the national level. The total area figures of all the tehsils/CD Blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of Police Station/ Tehsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tehsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different level

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on Total Population, the Scheduled Castes Population and the Scheduled Tribes Population for each town.

ANNEXURE-II

NOTE ON FERTILITY, MORTALITY AND MIGRATION-1991 CENSUS

Fertility Levels : Births, deaths and migration are three components of population change in any geographical unit. Fertility is a major component of population growth. In the 1991 Census, questions on fertility related to age at marriage, number of surviving children, number of children ever born alive and children born alive during the last year were canvassed to generate the table on fertility. The first three questions were asked to all ever married women and the last question was asked to currently married women. Various measures of fertility worked out are based on the district level estimates of fertility and child mortality for 1991.

Different fertility measures reveal higher levels of fertility in the state compared to the district. Age at marriage of females in the district is higher as compared to State. Child Woman Ratio in the district is lower in comparison to State.

The following table gives Age specific Marital Fertility levels for 1991

Age-group	Kangra District			Himachal Pradesh		
	Total	Rural	Urban	Total	Rural	Urban
1	2	3	4	5	6	7
15-19	91	89	138	142	142	140
20-24	220	220	218	259	260	239
25-29	164	164	150	170	172	152
30-34	68	68	65	79	81	61
35-39	27	27	36	38	39	28
40-44	12	12	15	17	18	9
45-49	6	6	6	9	9	9

It may be seen from the table that fertility levels in the district are lower as compared to the state figures in all the age groups Rural fertility rates in respect of district are higher in the age groups 20-24, 25-29 and 30-34 and lower in remaining age groups as compared to urban fertility rates. However, in the case of state, rural fertility rates are higher in comparison to urban rates Among age groups, the higher fertility rates are observed in the age-group 20-24 followed by age group 25-29 at both state and district level.

Child Mortality Rates, 1991 : Information on the questions relating to children ever born and children surviving were canvassed for all ever married women. From this, estimates of child mortality have been worked out.

Persons Males/ Females	Estimates of child mortality, 1991							
	Kangra district				Himachal Pradesh			
1	2	3	4	5	6	7	8	9
	q(1)	q(2)	q(3)	q(5)	q(1)	q(2)	q(3)	q(5)
Persons	77	87	95	100	82	86	92	95
Males	79	89	97	100	84	90	95	98
Females	74	84	92	99	81	82	89	92

From the estimates of child mortality (number of deaths by ages 1,2,3 and 5) given above as q(1), q(2), q(3) and q(5), it is observed that the level of child mortality in the district is substantially higher as compared to the state except for one year age, which is higher at state

The notable feature is lower female child mortality compared to males child mortality at the district as well as in the state level.

The Annexure-III reflects the crude birth rate, various fertility rates, child woman ratio, mean age at marriage at district level in the state.

Migration (Movement of population)

Migration is the third component of population change, the other two being Mortality and fertility A person is considered as migrant by place of birth if the place in which she/he is enumerated during the Census is other than the place of her/his birth Similarly, a person is considered as a migrant by place of last residence if the place in which she/he is enumerated during the Census is other than his place of immediate last residence

Internal and International Migration

The migrational movements are of three types -

(i) Migration within the State itself with its components

(a) Migration within the district of enumeration (intra-district migration)

(b) Migration from one district of State to another district of State (inter-district migration)

(ii) Migration from one State to another State of the country (inter-state migration), and

(ii) Migration from one country to anothe country

The first two streams together constitute interna migration, while the last type of movement is callec international migration

Why people migrate - For the first time in th Census; reasons for migration were elicited in 1981 The reasons for migration were broadly categorizec as (1) Employment (2) Business (3) Education (4 Marriage (5) Moved after Birth (6) Moved with house hold and (7) Any other reason

Reasons for migration have been elicited onl with reference to movement from place of las residence.

Impact of Migration - Growth of population o a particular place depends upon natural increase du to excess births over deaths and migration Knowledge of trends in migration helps in futur planning of a region.

Annexure-IV(A) reveals the percentage distribution of migrants by place of birth during 1991 and 2001 Censuses. In 1991 Census, there were 427,477 total migrants in Kangra district comprising of 104,838 males and 322,639 females.Of these migrants, 366,810 (85.80 per cent) comprising of 78,088 (74 49 per cent) males and 288,722 (89.49 per cent) females were born within the states of enumeration, On the other hand, 52,050 (12.18 per cent) comprising of 21,368 (20.38 per cent) males and 30,682 (9.51 per cent) females were born in other states of India and 8,672 (2.02 per cent) comprising of 5,382 (5.13 per cent) males and 3,235 (1.00 per cent) females were those born in other countries. Whereas in 2001

Census 487,598 persons were recorded as total migrants in the district Out of the total migrants, 421,448 (86.44 per cent) comprising of 73,001 (71 63 per cent) males and 348,447 (90.35 per cent) females were born within the state of enumeration, 57,597 (11 81 per cent) comprising of 23,367 (22.93 per cent) males and 34,230 (8 87 per cent) females were born in other states of India and 8,553 (1.75 per cent) comprising of 5,539 (5 44 per cent) males and 3,014 (0 78 per cent) females were born in other countries

On the basis of comparison of data pertaing to 1991 and 2001 Censuses, slight variation in migration pattern has been noticed. In the category of migrants born within the state of enumeration, the percentage has gone up from 85 80 per cent to 86 44 per cent whereas in the category of migrants born in other states and migrants born in other countries the percentage has shifted down to 12.18 per cent to 11 81 and 2.02 per cent to 1.75 per cent respectively. It is interesting to note that during 1991 and 2001 Censuses, males dominated the categories of migrants born in other states of India and migrants born in other countries whereas females dominated the category of migrants born within the state of enumeration

A person who can read and write with understanding in any language is taken as a literate. A person who can merely read but can not write is not considered literate. In Census, to be a literate, it is not essential that a person should have received any formal education or passed any prescribed examination. It is better to distinguish between literacy and educational level. Literacy means the proportion of literates to total population whereas educational level relates to stage of schooling or college or other training attained by a person.

In Census, children below 7 years of age are treated as illiterates and excluded from the total population for working out the literacy rate. This is known as effective literacy rate. The data collected on literacy and educational level helps in measuring the progress of literacy as well as quality of education.

The literacy rate of State and Districts are given below -
