Foreword

The District Census Handbook (DCHB) published by Census Organisation since 1951 census, is one of the important publications in the context of planning and development at grass-root level. The publication, which is brought out for each district, contains several demographic and socio-economic characteristics village-wise and town-wise of the district alongwith the status of availability of civic amenities, infrastructural facilities, etc.

2. The scope of the DCHB was initially confined to a few Census tables and Primary Census Abstract (PCA) of each village and town within the district. Thereafter, at successive censuses, its scope and coverage has been enlarged. The DCHB published at the 1961 census provided a descriptive account of the district, administrative statistics, census tables and a village and town directory including PCA. The 1971 census-DCHB series was in three parts: Part-A related to village and town directory, part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district census tables and certain analytical tables based on PCA and amenity data in respect of villages. The 1981 census DCHB was in two parts: Part-A contained village and town directory and Part-B the PCA of village and town including the SCs and STs PCA up to tahsil/ town levels. New features alongwith restructuring of the formats of village and town directory were added into it. In Village Directory, all amenities except electricity were brought together and if any amenity was not available in the referent village, the distance in broad ranges from the nearest place having such an amenity, was given. Information on new items such as adult literacy centers, primary health sub-centres and community health workers in the village were provided so as to meet the requirements of some of the Revised Minimum Needs Programme. Information on approach to the village was provided for the first time in the village Directory so as to give the details on number of inaccessible villages in each district. In the town Directory, a statement (IV-A) on slums introduced to provide the details on civic and other amenities in the notified slums of Class I and Class II towns.

3. The 1991 census DCHB, by and large, followed the pattern of presentation of 1981 census, except the format of PCA was restructured. Nine-fold industrial classification of main workers was given against the four-fold industrial classification presented in the 1981 census. In addition, sex-wise population in 0-6 age group was included in the PCA for the first time with a view to enable the data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 census. One of the important innovations in the 1991 census was the Community Development Block (CD block) level presentation of village directory and PCA data instead of the traditional tahsil/taluk/PS level presentation. It was expected that the presentation of village directory and PCA data at CD block level will help the planners in formulation of micro level development plans, CD block being lowest administrative unit.

4. The present series of 2001 census DCHBs have been made more informative and exhaustive in terms of coverage and content. The village Directory has been enlarged in scope by including a number of other facilities like banking, recreational and cultural facilities, newspapers and magazines and 'most important commodity' manufactured in village. Income and expenditure of gram panchayat, wherever possible, has been provided. Apart from these, more details on distance(s) at which basic amenities are available (if not available in the village), are given. This includes educational facilities (namely primary and middle schools and college), medical facilities (viz. Allopathic Hospital, Maternity & Child Welfare Centre and Primary Health Centre), drinking water, post & telegraph (post office and phone), communication, bank, credit societies and recreational

facilities. In town Directory, the statement on slums has been modified and its coverage enlarged by including details on all slums instead of 'notified slums'. The information is given in case of all statutory towns irrespective of their class, against only Class I and Class II towns in the 1981 and 1991 censuses. The basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. Two other significant additions in the publication are inclusion of 'motif' highlighting significant characteristic of the district and analytical notes as annexures. The analytical notes on (i) fertility and mortality and (ii) various measures of fertility and mean age at marriage are prepared based on 1991 Census. Whereas, in the notes relating to (i) percentage distribution of migrants by place of birth/place of last residence, (ii) main religions, (iii) marital status of population, (iv) age, sex and education , and (v) distribution of spectrum of mother tongue, nature and extent of changes occurred in the district in its basic socio-demographic features during the decade 1991-2001 are analysed. The eight digital permanent location code (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

5. The village and town level amenity data have been collected, complied and computerised in prescribed record structure under the supervision of Shri Prabhakar Bansod, Director of Census Operations, Bhopal. Thereafter, efforts have been made to ensure comparability of the information with that of 1991 census data and the information brought out by the respective state governments in their annual reports and statistical handbooks for various years after 1991. The task of planning, designing and coordination of this publication was carried out by Shri R.G. Mitra, Deputy Registrar General (C&T) and Dr. I.C. Agrawal, Senior Research Officer of Social Studies Divisions. Dr. R.P. Singh Deputy Registrar General (Map) provided the technical guidance in the preparation of maps. Whereas, Shri Anil Kumar Arora, Deputy Director of Data Processing Division who worked under the overall supervision of Shri Himakar, Addl. Director(EDP) helped in preparation of record structure for computerisation of village and town directory data and the programme for the generation of Village Directory and Town Directory statement including analytical inset tables. The draft DCHB manuscripts received from the Census Directorates have been scrutinised in the Social Studies Division under the guidance of Shri S.L.Jain, Deputy Director and Shri. R.K. Mehata, Assistant Director. I am thankful to all of them and others who have contributed to make this publication possible.

Preface

The District Census Handbook (DCHB) compiled by the Census organization, Government of India is one of the most valuable and usable product of the Census. As its name suggests, it is brought out for each district in the State. This publication started from the 1951 Census, but prior to this, a similar publication was released in the earlier censuses. Those publications contained only village statistics, village names and total population thereof. The 1951 Census could, therefore be said to represent a significant step forward, in the process of making detailed census statistics available down to the village level. An important achievement, for the first time in 1991 Census, was that the village level data was presented Community Development Blockwise.

The scope of District Census Handbook has undergone considerable change since 1951. This is basically due to the growing demand for more information. For the purpose of convenience as well as with a view to make the basic statistics available to the data users, as early as possible, the District Census Handbooks of 1991 were brought out in a single volumes as against the earlier practice of bringing it out in two parts. The volume was however divided in two parts viz. part A and part B. Part A contained the Village/Town Directory while part B contained the Primary Census Data, based on the 1991 Census count. Continuing the practice of 1991 Census, the 2001 series of the District Census Handbooks is comprised of two parts but the present series is more informative in terms of coverage and contents. Part A contains Village Directory which provides information on infrastructure amenities and land use data at village level i.e. name and location of villages, area, population, number of households, important civic amenities/facilities available in villages like educational, medical, drinking water, post, telegraph, commercial and co-operative banks, agricultural and non-agricultural credit societies, recreational and cultural facilities, communications, approach to the village, nearest town and its distance, power supply, news papers/magazine and most important commodity manufactured in the villages. Similarly, the comprehensive statements and their analysis of Town Directory provide valuable information on growth, physical, economic, civic and development aspects in respect of each town of the district. C.D. block being the lowest administrative unit for developmental planning, it is assumed that the data provided at this level would be extremely useful to the planners for formulating micro level developmental plans.

Part B of the District Census Handbook contains Village and Town Primary Census Abstract. This provides information on area, occupied residential houses, number of households, sex-wise total population. child population in age-group 0-6, Scheduled Castes and Scheduled Tribes, literates, workers, non-workers and divisions of workers into four industrial categories i.e. cultivators, agricultural labourers, workers in household industries and other workers in respect of each village and town of the district. Besides the brief history and other major characteristics of the district, inset tables and appendixes based on village directory, housing tables and PCA and their analysis added in the District Census Handbook provide glimpse of availability of amenities to villages relating to housing, assets available with households and demographic profile of population at tahsil/ C.D block level which are helpful for rural planning. Annexures giving information on religion, Scheduled Castes/Scheduled Tribes, migration, fertility, mother tongue have been included.

It has to be remembered that the villagewise area figures presented in the PCA are based on village information in the form of C-3 as furnished by the revenue authority and the "total" given for the administrative units viz, community development blocks, is the total of the area figures of village coming under it while in the case of the administrative unit viz, tahsil, the "total" area shown, is based on the information furnished by the Commissioner, Land Records, Government of Madhya Pradesh, Gwalior. In some cases the total area shown against the tahsil, may not tally with the total of the area figures of villages coming under it.

The District Census Handbook had been a joint venture of the Government of Chhattisgarh and the Government of India. The design of 2001 District Census Handbook has been evolved centrally by the Census Commissioner, India and accordingly these books have been prepared by my office. In earlier censuses, the cost of publication of these books were borne by the State Government but now these are being printed centrally by the Census organization. In accomplishing this task we have had the whole hearted cooperation of the staff at various levels of different departments of the State Government. The data supplied by the field level officers have been comparatively checked with 1991 DCHB and have been cross checked with the data obtained from various departments. An attempt had been made to reconcile the discrepancies by external validation to make it more reliable. I am grateful to all heads of departments of the State Government, officers and staff engaged in the conduct of 2001 Census for their cooperation to accomplish this task.

The compilation of such a huge amount of varied data in a single volume requires proper planning and close monitoring. We have the honour of having enlightened guidance and encouragement of Shri D.K.Sikri, IAS, Secretary (Registrar General and Census Commissioner, India). I owe special thanks to Shri. J.K.Banthia, then Registrar General and Census Commissioner, India. I am thankful to Dr. R.P. Singh, DRG (Map), Shri. R.G. Mitra DRG (C&T) and Dr. I.C. Agrawal, Sr. Research Officer (S.S.) and Shri.S.L. Jain, Dy. Director of S.S.Division for providing technical guidance.

In the directorate many officers/officials contributed in the Census 2001. First of all, I pay my gratitude to the then Director of Census Operations, Madhya Pradesh & Chhattisgarh, Shri Prabhakar Bansod under whose guidance, the Census 2001 was carried out successfully. I am also thankful to Shri Ram Singh then Joint Director, under whose supervision this District Census Handbook has been prepared.

The data presented in the District Census Handbook required a concerted work of team comprises Shri Jose T.Varghese, Assistant Director, Shri Deepak Rao, S.I.Grade-I, Shri R.Patel, S.I.Grade-I, Shri O.S.Shukla, Draftsman, Shri Santosh C.Mendhe, D.E.O.Grade-B and Shri Hirendra Kumar Sinha, Compilor of this Directorate who were involved with it at various stages of its planning, supervision, preparation of manuscript, field work, computerisation, prepration of CRC with the help of Adobe Pagemaking technique, maps and printing. I express my appreciation for the painstaking dedicated service rendered by all of them and staff of Data Centre, Bhopal for their untiring cooperation in finalizing the 2001 Census Data.

I shall feel greatly rewarded if the book comes to the expectation of the data users.

ANALYTICAL NOTE

Analytical Note

(i) History and Scope of District Census Handbook:

The District Census Handbook (DCHB), compiled by the Census Organisation, Government of India, on behalf of the State Government is one of the most valuable product of the Census. It is brought out for every district and is a very useful publication which is widely used by planners, administrators, academicians and researchers as it provides, among other things, the primary census data down to the village level.

History :

The history of the District Census Handbook could be traced from the "Village lists" brought out for every district in 1901 and "Village Statistics" for every district in 1911. This was discontinued in 1921 and 1931. In 1941, however, "Village Statistics" were brought out by the then Central Provinces and Berar Government. It was for the first time in 1951 that the practice of brining out a single volume known as District Census Handbook, giving village wise statistics and other Census tables for the districts, at the cost of the State Government, was initiated .

Scope :

The maiden publication of the District Census Handbook of 1951 contained village wise primary census data and census tables for the district. With the increasing utility and demand of statistical data for the planning process, the scope of the District Census Handbook was enhanced to a great extent in 1961 by including non-census data like climate, agriculture, animal husbandry, co-operative bank, industry, education, health, etc., apart from presenting the village wise primary census data and census tables. An introductory note giving information on historical background, physical features, soil, climate, civic administration, agriculture, industry, education, etc. together with detailed analysis on census tables was also a novel feature of the 1961 census. Maps of District and Tahsil were also included.

Publication of DCHB at the 1971 Census :

The desire to make the District Census Handbook more comprehensive in 1961, delayed the publication in some states. Therefore, in 1971, the Registrar General and Census Commissioner of India, decided to bring out DCHB in three parts viz. Part A, B and C, in order to release the maximum data as and when ready. Accordingly Part A was to contain the village wise Land Use data and the amenities and facilities available in the villages, these being part of the non-census statistics. Part B was to comprise the village wise primary census data, while in part C, the various non-census statistics at the district level and a few at tahsil level were to be presented.

Strategy at the 1981 Census :

In 1981 census with a view to avoid delay in the publication of DCHB series, part C containing the non-census statistics, as well as the census tables for the district were dropped. The scope of the District Census Handbook was, however, enlarged by the addition of tahsil wise list of villages where no amenities were available and tahsil wise list of the villages according to the proportion of Scheduled Caste/Tribes population by ranges in the form of Appendices III and IV respectively were added since Appendices I and II were already there.

Appendix III has been helpful for planning input in areas/villages where basic infrastructure is lacking, while Appendix IV has been helpful for planning welfare programmes for Scheduled Castes/Scheduled Tribes at micro level, particularly in relation to development oriented programmes.

In the town directory portion of DCHB Part A and additional Statement IV-A was also introduced in 1981. This statement was meant only for Class I and Class II towns and indicated the civic and other amenities in notified slums.

The inclusion of the Primary Census Abstract relating to the Scheduled Castes and Scheduled Tribes

at the tahsil/town level in Part B portion of the DCHB was another important feature of 1981 Census. An appendix containing Development Block wise totals of Primary Census Abstract was also presented in the DCHB series 1981 though it was not prescribed in the All India pattern.

The 1991 DCHB Series :

In the context of development planning the CD Block stay as an operational unit, the presentation of village-wise statistics at the CD Block level had been very helpful for the administrators and planners in formulating various development plans. The same had been presented CD Blockwise in 1991 Census.

The scope of the 1991 DCHB, particularly the village directory was enhanced to a great extent by the inclusion of additional information on various subjects such as intset tables on area, population and density in the districts, tahsils and towns, jurisdictional changes 1981-91 etc.

Contents of the DCHB series 2001 :

The present series of District Census Handbook consisting of two parts viz. Part A and Part B is being published in a single Volume.

Part A Village Directory :

Village Directory contains information about the name of the village with location code number, assigned to it by the Census Organisation, geographical area of the village, total population and number of households in the village, amenities like education, medical, drinking water, post and telegraphs, communications, approach to village together with distance in Km, distance from the nearest town, power supply and land use data. In addition there are eight appendix to the Village Directory as under :

Appendix I : CD Block wise(rural) abstract of educational, medical and other amenities.

Appendix I-a : CD Blockwise abstract of villages by number of Primary schools.

Appendix I-b : CD Blockwise abstract of Villages of Primary, middle and secondary schools.

Appendix to Town Directory – Towns showing their outgrowth with population.

Primary Census Abstract

Part B: -The Primary Census Abstract gives basic information on Area, Total Households, Total population, Scheduled Castes, Scheduled Tribes population, Population in tha age group 0-6, Literates, Main Workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural Labourers, (iii) Household Industry Workers, and (iv) Other Workers and Non-workers. The characteristics of the Total population includes Scheduled Castes, Scheduled Tribes, Institutional and Houseless population and are presented by sex and rural-urban residence. This data is presented at different levels namely, Districts, CD blocks, Village, and UA/Towns. In addition, Ward/Enumeration blockwise population is given in the Appendix to District Primary Census Abstract.

Primary Census Abstracts for Scheduled castes and Scheduled Tribes:

The Primary Census Abstract relating to Scheduled Castes and Scheduled Tribes is also being presented separately at the CD Block-wise /Town wise. It will have the same characteristics as indicated in the Primary Census Abstract to the total population.

Publication of DCHB in Regional Language :

In 1981, part A and part B of DCHB were brought out separately for every district which were printed in diglot i.e. a mixed up Hindi and English versions while in 1971, both the parts i.e. part A and part B were brought out in a single volume with simultaneous Hindi and English versions. The 1961 DCHB were however published in a single volume in English version only for district, since there were no separate parts like DCHB of 1971 and 1981 censuses. The 1951 census DCHB series were published with a mix of both Hindi and English but with a difference.

New Features of DCHB 2001 :

The main features of Village Directory of DCHB 2001 are :

(1) For the first time eight digit continuous location code is assigned to all the villages within the state. These are the Permanent Location Code Numbers (PLCN) and starts from the first village of first tahsil of first district of state and continue till the end of last village of last tahsil of the last district within a state.

(2) The State codes are given in serpentine order for the first time which were assigned alphabetically in 1991 Census . As a result the State code of Chhattisgarh is assigned code 22 in Census 2001.

(3) As compared to earlier series of Village Directory additional and more useful information viz. number of Commercial / co-operative banks and the nearest distance of availability of amenity, Agriculture and Non-Agriculture credit societies, Recreational and Cultural facilities, availability of Newspaper/magazines and names of important commodities manufactured are included in Census 2001 for the first time in Village Directory.

(4) Annexures giving information on fertility, religion, migration, mother tounge, Scheduled Caste/ Scheduled Tribe have been included in DCHB 2001.

Town Directory :

No major change has been made in Town Directory when compared to Town Directory of 1991. However, some improvement has been made in the data collection on slums of the towns having population 50,000 and more in which separate Enumeration Blocks were carved for slums during houselisting and population enumeration. In 2001 information in respect of slum areas have been collected for all towns.

The information of slums for Class I and II towns that is with population 50,000 or more was compiled in statement IV-A in Census 1991. In Census 2001, this information is compiled for all the towns irrespective of their size in statement VII.

Primary Census Abstract :

(1) Information on individuals has been collected in Household schedules and practice of collecting data on individual slip has been discontinued.

(2) For persons recorded as other workers, the information on distance of place of duty and the means of transport of place of duty are obtained in column 27 and 28 of the household schedule.

(3) The information on Disability is obtained for the first time in Census 2001 in column 15 of the household schedule.

(4) The household schedule is divided in three parts. The information on cultivation/ plantation is recorded in part III of the household schedule for the first time in census 2001.

(ii) Brief History of the District* :

According to gazette notification No. 1006/F - 20.8.92/ Sha-8- dated 22.5.1998. The area of Kunkuri, Jashpur, Bagicha and Pathalgaon tahsils have been separated from erstwhile Raigarh district and a new district has been carved out namely Jashpur. Consequently the geographically area of Raigarh is comparatively reduced.

The district is named after Raigarh town, the headquarterof the feudatory state of the district. Prior to the formation of the district, Raigarh was the capital of an important princely feudatory state. According to gazetteer the name Raigarh is derived from 'rairi'(the Gibraltar of the East) meaning species of thorny tree and 'garh' means a fort or killa.

Later on 1st January, 1948 the five states of Raigarh, Sarangarh, Udaipur, Jashpur and Sakti were constituted into a new district named Raigarh. Under the reorganization of states in 1956 part of Kharsia tahsil and entire former Sakti tahsil was transferred to Bilaspur district.

The district do not have enough ancient inscriptions or remains as authentic evidence of ancient history. However, the rock paintings and rock inscriptions of Singanpur village near Noharpalli railway station indicate that this area had been the inhabitation of human beings even in ancient times.

As per ancient legends as well as historical references, the area of Raigarh district was under "South Kosala. It has a chequered history of victories and defeats, glories and sub-jugations. Coming to the historical period, this region formed a part of vast empires built by the Nanda and the Mauryas. Thereafter it seems to have come under the sway of the Satavahanas. This is attested by the account of the Chinese traveller Hiuen-Tsang. After the downfall of Satavahanas, later on Guptas, Sarabhapurias, Panduvansis, the Samvanshis and the Kalchuris of Ratanpur ruled over the Raigarh district for a century.

In the second-half of the 18th century the Marathas suppressed the Kalchuri power and succeeded in establishing their hold over the whole Chhattisgarh. In about the same century Madan Singh, a Gond from Wairagarh established a principality, first at Banga and later shifted to Raigarh. Under the British regime, Deonath Singh, the chief of Raigarh put down the rebellion against the British by Ajit Singh the Raja of Baragarh. In 1852 the State of Udaipur was entrusted to the British Government due to the cruel behavior of the ruler. However, in 1860 the state was conferred on Bindeswari Prasad Singh Deo. In 1871, he aided the British suppressing rebellions of Keonjhar State and in recognition of services he was given the title of "Raja-Bahadur" by the British Govt.

In the year 1861 the Central Provinces came into being. Raigarh and Sarangarh state came under the administration of the Central provinces. During freedom movement, Congress made its impact upon the people of the district. In 1923 when the formers Flag Satyagraha was organized at Nagpur, Shri Prabhulal Kabra and Bande ali fatami, from the district, took part in the Satyagraha. From this time onwards the signs of political awakening were traceable in the district.

In the forest Satyagraha that was inaugurated in the district during the Civil Disobedience Movement Harijan, Dhaniram, Jagatram and Kuar Bhan courted arrest.

On 8th August, 1942 the All India Congress Committee passed the "Quit India" resolution. In the district Seth Dulichand and Baldeo Prasad helped their best to promote the movement. In struggle for freedom, women of the district also played important roles, prominent among whom were Hemlata Bai, Nanhi Bai and Manorama Devi.

Thereafter in 1948, the merger of States to Indian Union took place and Raigarh state too was incorporated to Indian Union Consequent to the reorganisation of States on the basis of language on 1st November 1956, Madhya Pradesh State was consolidated. On 1st November 2000. Madhya Pradesh State was divided and a new state Chhattisgarh was carved out, Raigarh district is one of the districts of Chhatisgarh state.

(iii)Administrative Set-Up*:

The district is the basic territorial unit of administration in the State as well as in India. The collector, as the head of district administration, is the key-functionary of the Government, having vast powers and wide responsibilities. In many ways he is the link between the state Govt. and the people. He is custodian of law and order and the pivot of local administration.

He is the Chief Executive Officer of the district and as such he exercises general supervision over various

departments in respect of general administration work. Co-ordination of the activities of various departments, control over local-self governing bodies, execution of Govt. Schemes and miscellaneous functions, such as Panchayat, Census, election and relief measures in time of emergencies like floods, famine and epidemics, etc. also come within his preview.

The Collector is assisted by Deputy Collectors, Tahsildars, Sub-Tahsildars, Revenue inspector and Patwaris. The collector is also associated with a number of others Committees in the district. The most important among them is the District Advisory Committee. The collector is also vested with statutory powers under Excise Act. so as to enable him to implement the excise and prohibition policy of the Govt. Superintendent of police is the head of Police department at the district headquarter and Deputy superintendent of police are posted at tahsil headquarters. In order to facilitate proper and smooth judicial and administration there are 25 police station in the district.

The Judiciary is independent. At the district level there is District Court headed by district and Session Judge. District and Session Judge is assisted by Civil-Judges who are posted at tahsil level.

During last decade (1991-2001) the following remarkable administrative changes took place:-

(i) Division of the district on 22nd May 1996
(ii) Entire Lailunga CD block of the Gharghoda tahsil, has been constituted on 2nd May 1998 as new tahsil, namely Lailunga by merger of 123 villages.
(iii) During 1991 Census total Number of the villages were 2244 in the district. Due to division of the district the number of villages in 2001 census remains only 1477. In the same way total area of the district was 12924 sq. kms. in 1991, which remains only 7068 sq. kms. in 2001 census.

According to Census 2001, the total number of villages are 1477 in the district. Out of which 1433 villages are inhabited. Tahsilwise number of villages are Gharghoda(98) Dharmjaigarh (Udaipur) (191), Sarangarh (536), Raigarh (292), Kharsia (137) and Lai lunga tahsil (123).Number of Gram Panchayats is 673. There are 196 Patwari Halka under revenue administration.

In the district there are 6 tahsils whereas CD blocks are 9, namely Dharamjaigarh, Lailunga, Gharghoda, Tamur, Raigarh, Pusour, Kharsia, Sarangarh, and Sarahi-ledha (Baramkela). There are 5 towns in the district. As per urban classification, Dharamjaigarh, Garghoda, Kharsia and Sarangarh are Nagar Panchyats whereas Raigarh is Municipal Council. In all the CD Block headquarters there are 9 Janpad Panchayat. There are 673 Gram Panchayat in the district. Under the revenue administration there are 196 Patwari Halkas.

(iv) Physical Features:*

Raigarh district is situated to the east of the State. It lies in the Bilaspur Revenue Commissioner's division, the district was constituted on the 1st January, 1948. It is bounded on the east by Indergarh, Jharsuguda and Bargarh district of Orrisa. On the north by Jashpur and Surguja (Ambikapur), on the west by Korba and Janjgir-Champa, on the south-west by Mahasamund and on the west by Raipur district. It extends from 21° 20' to 22° 47' north latitude and from 82° 57' to 83° 47 east longitude. As per the census 2001, it's geographical area is 7086 sq. kms. (reported by Surveyor General of India) it is the eighth largest district of Chhattisgarh in respect of area, which is 5.24% of the total area 1,35,191 sq. kms. of the Chhattisgarh State.

Raigarh District is divided into three major physical divisions, viz:- the Pathalgaon -Lailunga Plateau, The Mahanadi Valley and Sarangarh hills. Half of the district is complicated in its character, composition and natural history. Pathalgaon - Lailunga plateau lies between the Mand and Kurket rivers in the west. Physiographically, it is associated with the extensions of the Mainpat. The village Lailunga settled at the foot of a hill 723 meters high. The peak Barkhoa-Donger is 515.4 meters high. The north_eastern margins of Pathalgaon plateau are drained by the east-flowing tributary rivers of Ib. The Kelo crosses the line between Chawardhal and Gajmar hills through Raigarh ,the district headquarters. Chawardhal is the highest 609.6 meters and widest of these hills lying to the north -west of Raigarh town.

Mahanadi Valley extends in Raigarh and Sarangarh tahsils between the Chawardhal and Sarangarh hills. The general width of the plain is about 24.2 km. The general elevation of the plain in Raigarh district is about 1288 km.The area comprises one of the most densely cultivated and thickly populated regions of

Chhattisgarh. The flora consists of grasses redundant shrubs, weeds etc in the patches of land over for essential purposes like " Nistar" in villages.

Sarangarh hills extended in a west to east direction from Sonakhan hills of Raipur district. Almost all important peaks are along the Southern boundary. The highest of them is Pathan near the meridian of Sarangarh town and is 582.5 meters high. Near the source of the Kenkamdi nala a cross mark of hills are presented. The northern ridge abets the Mahanadi cross Chandarpur the Southern range forms Donger Kermali across Singhora pass in Raipur, and the north - eastern line develops into Dechua and Bhupapahar hills. Karanpali pool on the northern ridge and Danmdawa hill on the north eastern hills rise to a higher over 396 meters.

Drainage:-

Most part of the district drain in to the Mahanadi which flows across the southern part ,from west to east. The Mahanadi rises in Sihawa hills, a few kilometers east of Nagri village in Raipur district. It flows towards the west up to Kanhar towards the north-east upto Raipur-Bilaspur boundary, and to the eastern limit crosses Raigarh District. Mand forms a part of the western boundary,while the Ib joins the Mahanadi in Sambalpur district .The Mahanadi touches the north-western boundary of Sarangarh tahsil of Raigarh District at Bhadra-Singhanpur after a course of about 274 kms. The channel of river is mostly sandy and a span of 225 to 90 metres is seen dry on both sides.

The Mand rises at south east of Mainpat Plateau (Ambikapur). It flows for about 42 k.ms in Surguja district and enters Dharamjaigarh Tahsil near Golobar. The river forms the western boundary of the district for about 19 kms below Dharamjaigarh and again for about 5 kms before it joins the Mahanadi. The river receives the Koirja and Chandi nalas on the right and the Kuket river on the left before crossing the narrow pass of Gurda which lies between Chanda Dongar and Bhari-Dongar.

The Kelo rises from Ludeg hill on the western part of Lailunga plateau and flows to the south. It drains the central part of Gharghora tahsil and eastern part of Raigarh tahsil. Raigarh town is located on its right bank. Its total length is about 97 km of which 90-k.ms lie in Raigarh. Koledama and Regara are its main tributaries.

Climate:-

The climate of this district is characterised by a hot-dry summer and well distributed rainfall in the South-West monsoon season. The winter season from December to February is followed by the summer season from March to mid-June. The period from mid-June to September constitutes the south-west monsoon season. The succeeding period lasting till the end of November is the post monsoon or retreating monsoon season.

The rainfall in the district increases from the south-west towards the north east. About 83 to 87 per cent of the annual rainfall in the district is received during the south-west monsoon months, June to September. The average annual rainfall reported in the district is 1534 mm. July being the rainiest month the variation in the rainfall from year to year is small. There are an average 62 rainy days (i.e. days with rainfall of 2.5mm or more) in a year in the district. This number varies from place to place.

There is a meteorological observatory in Raigarh. Temperatures begin to increase rapidly from about the beginning of March. May is usually the hottest month with the mean daily maximum temperature at 42.5°C and the mean daily minimum at 26.5° C. The heat in May and the early part of June till the onset of monsoon is tiring. The onset of monsoon by about mid-June brings some relief as the temperature decreases appreciably. The temperature begin to decrease rapidly after October. December and January are generally the coldest months. The district is sometimes affected by cold waves in association with passing western disturbances across north India and then the minimum temperature drops down to about 5° C to 7° C.

During the monsoon season depressions from the Bay of Bengal move across the District or its neighbourhood causing widespread heavy rain and gusty winds. Storms and depressions from the Bay of Bengal during October also occasionally reach the district. Thunderstorms occur in summer and the beginning of monsoon season.

Forest:-

Forest have important role in the economy of the district. Forest have important role in maintaining ecological balance, conservation of soil erosion and forest based industries . The district has generally mixed forests. Teak and sal forests are in abundance.

It is omnivorous and the most commonly seen of all the wild animals. Main forest produces are tendu leaves, timber wood, Mahua, Harra, lac, gum and other several medicinal products.

Land-Use:-

Bahala, Ratanha, Khari, Matasi, Kauhar, Tikra and Dorsa are the soil found in the district. Total geographical area of the district is 708600 hectares out of which forest area is 332900 hectares i.e. 46.98% of total area. The non-agricultural land is 14277 hectares, uncultivable and barren land is 64270 hectares-Cultivable land is 283289 hectares and waste land is 53292 hectares as reported. Kanhar and Matasi soil in combined form is called Tikara or Tikari soil which is not suitable for crops. This type of soil can be used for plantation and orchard and for kodo-kutki crops. For the cultivators adequate guideline is being provided to increase the production.

Minerals:-

In this district mainly coal, limestone, quartzite, stone, sand-stone and sand are found. Mining-policy is being implemented in the district. since 2001, to promote the production and export of these minerals. During 1999-2000, The coal excavation was 3028642 mt. tonnes and lime-stone quarried was 33970 mt. tonnes as reported excavation of Pharsi-stone, Murram sand and soil was 60773 , 3535 , 6523 and 20601 mt. tonnes respectively.

Agriculture:-

Paddy is the main crop of the district however, maize, kodokutki, tuvar, urad, kulthi, groundnut, til, ramtil and soyabean crops are also sown. Among rabi crops wheat, gram, tiwara, linseed, alsi are sown. In the year 1999-2000, total sown area was 282400 hectares whereas net sown area was 303000 hectares as reported. Area under food crops was 288000 hectares and non-food crop area was 15000 hectares. Double cropping area is 20000 hectares. In Chhattisgarh state, central aided ICDP rice project is being implemented in all the 16 districts. For total upliftment of the agricultural production there are several projects being implemented and thus production is gradually increasing. The soil of the district is very fertile and suitable for commercial crops, like pulses, oilseeds, graveling and medicinal plantation.

Irrigation:-

Economy of Raigarh district, like the vast majority of the districts of the state, is dominated by agriculture. Main source of the irrigation is canals. Irrigation by canals is 13000 hectares, by tank 3000 hectares and by tubewells and well 10000 hectares and by other sources 7000 hectares of land is irrigated. Due to promotions of means of irrigation, improvement in traditional methods has been taken up. Irrigated areas has rapidly increased in the district, due to the Hasdeo Bango irrigation project. Due to better irrigation management plan, training and proper education to the farmers irrigation in the district has been improved.

purposes such as shop-cum-residence,workshop-cum-residence,office-cum-residence, etc.

Usually a structure will have four walls and a roof. But in some areas the very nature of construction of houses is such that there may not be any wall. Such is the case of conical structures where entrance is also provided but they may not have any walls. Therefore, such of the conical structures are also treated as separate buildings.

Permanent houses

Houses, the walls and roof of which are made of permanent materials. The material of walls can be any one from the following, namely, galvanized iron sheets or other metal sheets, asbestos sheets, burnt bricks, stones or concrete. Roof may be made of from any one of the following materials, namely, tiles, slate, galvanized iron sheets, metal sheets, asbestos sheets, bricks, stones or concrete.

Semi-permanent houses

Houses in which either the wall or the roof is made of permanent material and the other is made of temporary material.

Temporary houses

Houses in which both walls and roof are made of materials, which have to be replaced frequently. Walls may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, plastic, polythene, mud, unburnt bricks or wood. Roof may be made from any one of the following temporary materials, namely, grass, thatch, bamboo, wood, mud, plastic or polythene.

Dwelling Room

A room is treated as a dwelling room if it has walls with a doorway and a roof and should be wide and long enough for a person to sleep in, i.e. it should have a length of not less than 2 meters and a breadth of at least 1.5 meters and a height of 2 meters. A dwelling room would include living room, bedroom, dining room, drawing room, study room, servant's room and other habitable rooms. Kitchen, bathroom, latrine, store room, passageway and verandah which are not normally usable for living are not considered as dwelling rooms. A room, used for multipurpose such as sleeping, sitting, dining, storing, cooking, etc., is regarded as a dwelling room. In a situation where a census houses is used as a shop or office., etc., and the household also stays in it then the room is not considered as a dwelling room. But if a garage or servant quarter is used by a servant and if she/ he also lives in it as a separate household then this has been considered as a dwelling room available to the servant's household. Tent or conical shaped hut if used for living by any household is also considered as dwelling room.

A dwelling room, which is shared by more than one household, has not been counted for any of them. If two households have a dwelling room each but in addition also share a common dwelling room, then the common room has not been counted for either of the households.

Census House

A 'census house' is a building or part of a building used or recognised as a separate unit because of having a separate main entrance from the road or common courtyard or staircase, etc. It may be occupied or vacant. It may be used for residential or non- residential purpose or both.

In certain peculiar situations, the manner in which buildings and census houses were identified for numbering in the field by the enumerators is described hereunder:

Sometimes a series of different buildings are found along a street which are joined with one another by common walls on either side looking like a continuous structure. These different units are practically independent of one another and are likely to have been built at different times and owned by different persons. In such cases, though the whole structure with all the adjoining units apparently appears to be one building, each portion was treated as a separate building and its constituent units as separate census houses.

On the other hand, one may come across cases, particularly in large cities of multi-storeyed ownership flats. In these cases while the structure looks like one building, different persons own the flats. In case of such multi-storeyed structures, having a number of flats owned by different persons, the entire structure was treated as one building and each flat as a separate census house.

If within a large enclosed area, there are separate buildings owned by different persons then each such building is treated as a separate building. There can be a situation where within an enclosed compound

there are separate buildings owned by an undertakingor company or even government that are actually in occupation of different persons. For example, Indian Oil Corporation colony where the buildings are owned by the Corporation but these are in occupation of their employees. Each such building was treated as a separate building. But if in any one of these buildings there were flats in occupation of different households, each such flat was reckoned as a separate census house.

Sometimes if becomes difficult to apply the definition of census house strictly in certain cases. For example, in an urban area, if a flat has five rooms, each room having direct entrance from the common staircase or courtyard. By definition, this has to be treated as five census houses. If all these five rooms are occupied by a single household it was not realistic to treat them as five census houses. In such a case,'singleness' of use of these rooms along with the main house should be considered and the entire flat was treated as one census house. On the other hand, if two independent households occupy these five rooms, the first household living in 3 rooms and the second household occupying 2 rooms, then considering the use, the first three rooms together were treated as one census house and the remaining rooms as another census house. But if each room was occupied by an independent household, then each such room was treated as a separate census house.

In case of hostels, hotels, etc., even if the door of each room in which an inmate lives opens to a common verandah, staircase, courtyard or a common room, as it happens almost invariably, the entire hostel/ Hotel building was treated as one census house. but if such hostels/ hotels have out- houses or other structures used for different purposes or the same purpose, then each such structure attached to the main hostel / hotel was treated as a separate census house.

In some parts of the country, in rural areas, the pattern of habitation is such that a group of huts, located in a compound, whether enclosed or unenclosed, is occupied by one household. While the main residence may be located in one hut, other huts may be used for sleeping, as a kitchen, bath room, baithak, etc. Though each of the huts was a separates structure, they form a single housing unit and therefore, have to be treated collectively as one building and one census house. If some of the huts are used by one household and the others by a second household as residence, then the two groups of huts were treated as separate census houses. However, if there were also other huts in the compound used for other purposes and not as part of the household's residence such as, cattle shed, workshed, etc., these were treated as separate census houses.

On the other hand, in urban areas, where more than one structure within an enclosed or open compound (premises) belonging to the same person, e.g., the main house, the servant's quarter, the garage, etc., only one building number was given for this group and each of the constituent a separate census house number.

Only cases where a structure with roof and pillars has come up was treated as a building.

Village :

The basic unit for rural areas is the revenue village which has definite surveyed boundaries. The revenue village may comprise of one or more hamlets but the entire village is treated as one unit for presentation of data. In unsurveyed areas, like villages within forest areas, each habitation area with locally recognized boundaries is treated as one village.

Rural-Urban area

The data in tables on Houses, Household Amenities and Assets are presented 'separately for rural and urban areas. The unit of classification in this regard is 'town' for urban areas and 'village' for rural areas. In the Census of India 2001, the definition of urban area adopted is as follows:

a) All places with a municipality, corporation, cantonment board or notified town area committee, etc.

b) A place satisfying the following three criteria simultaneously:

   i) A minimum population of 5,000 ;

   ii) at least 75 per cent of male working population engaged in non-agricultural pursuits; and

   iii) a density of population of at least 40per sq. km.(1,000 per sq.mile)

For identification of places which would qualify

to be classified as 'urban' all villages, which, as per the 1991 Census had a population of 4,000 and above, a population density of 400 persons per sq. km. and having at least 75 per cent of male working population engaged in non-agricultural activity were considered. To work out the proportion of male working population referred to above against b) (ii), the data relating to main workers were taken into account.

Apart from these, the outgrowths(OGs) of cities and towns have also been treated as urban under 'Urban Agglomerations'. Examples of out-growths are railway colonies, university campuses, port areas, military camps, etc., that may have come up near a statutory town or city but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the demographic criteria laid down at (b) above to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the towns as a continuous urban spread. Thus, the town level data, wherever presented, also includes the data for outgrowths of such towns.

City :

Towns with population of 1,00,000 and above are called cities.

Urban Agglomeration :

An Urban Agglomeration is a continuous urban spread constituting a town and its adjoining urban outgrowths (OGs) or two or more physically contiguous towns together and any adjoining urban outgrowths of such towns. In some cases railway colonies, university campuses, port areas, etc., may come up near a city or statutory town outside its statutory limits but within the revenue limits of a village or villages contiguous to the town or city. Each such individual area by itself may not satisfy the minimum population limit to qualify it to be treated as an independent urban unit but may deserve to be clubbed with the town as a continuous urban spread. For the purpose of delineation of Urban Agglomerations during Census of India 2001, following criteria are taken as pre-requisites:

(a) The core town or at least one of the constituent towns of an urban agglomeration should necessarily be a statutory town ;and

(b) The total population of all the constituents (i.e. towns and outgrowths) of an Urban Agglomeration should not be less than 20,000 (as per the 1991 Census). With these two basic criteria having been met, the following are the possible different situations in which Urban Agglomerations would be constituted:

i) a city or town with one or contiguous outgrowths;

ii) two or more adjoining towns with their outgrowths; and

iii) a city and one or more adjoining towns with their outgrowths all of which form a continuous spread.

Household

A 'household' is usually a group of persons who normally live together and take their meals from a common kitchen unless the exigencies of work prevent any of them from doing so. Persons in a household may be related or unrelated or a mix of both. However, if a group of unrelated persons live in a census house but do not take their meals from the common kitchen, then they are not constituent of a common household. Each such person was to be treated as a separate household. The important link in finding out whether it was a household or not was a common kitchen. There may be one member households, two member households or multi-member households.

Institutional Household

A group of unrelated persons who live in an institution and take their meals from a common kitchen is called an Institutional Household. Examples of Institutional Households are boarding houses, messes, hostels, hotels, rescue homes, jails, ashrams, orphanages, etc. To make the definition more clearly perceptible to the enumerators at the Census 2001, it was specifically mentioned that this category or households would cover only those households where a group of unrelated persons live in an institution and share a common kitchen.

Houseless household :

Households who do not live in buildings or census

houses but live in the open on roadside, pavements, in hume pipes, under fly-overs and staircases, or in the open in places of worship, mandaps, railway platforms, etc., are treated as Houseless Households.

Scheduled Caste and Scheduled Tribe :

Article 341 of the Constitution provides that the President may, with respect to any State or Union territory, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of the Constitution be deemed to be Scheduled Castes in relation to that State or Union territory. Article 342 similarly provides for specification of tribes or tribal communities or parts of or groups within tribes or tribal communities which are to be deemed for the purposes of the Constitution to be Scheduled Tribes in relation to the various States and Union territories. In pursuance of these provisions, the list of Scheduled Castes and/or Scheduled Tribes are notified for each State and Union territory and are valid only within the jurisdiction of that State or Union territory and not outside. It is important to mention here that under the Constitution (Scheduled Castes) Order, 1950, no person who professed a religion different from Hinduism was deemed to be a member of a Scheduled Caste in addition to every member of the Ramdasi, Kabirpanthi, Majhabi or Sikligar caste resident in Punjab or Patiala and East Punjab States Union were in relation to that State whether they professed the Hindu or the Sikh religion. Subsequently, in September 1956, by an amendment, the Presidential Order of 1950 and in all subsequent Presidential Orders relating to Scheduled Castes, the Hindu and the Sikh religions were placed on the same footing with regard to the specification of Scheduled Castes. Later on, as per the amendment made in the Constitution (Scheduled Castes) Order 1990, the Hindu, the Sikh and the Buddhist were placed on the same footing with regard to the recognition of the Scheduled Castes. The lists containing the names of the Scheduled Castes and the Scheduled Tribes applicable for the Census of India 2001 in the State/ Union territory are given below:

Language and Mother tongue :

As per the census concept, each language is a group of mother tongues. The census questionnaire collects information on the mother tongue of each person and mother tongue is defined as the language spoken in childhood by the person's mother to the

person. If the mother died in infancy, the language mainly spoken in the person's home in childhood will be the mother tongue. In the case of infants and deaf mutes, the language usually spoken by the mother is considered as mother tongue. It is not necessary that the language spoken as mother tongue should have a script. The mother tongues returned by the respondents in census are classified and grouped under appropriate languages according to their linguistic characteristics.

Literate :

A person age 7 years and above who can both read and write with understanding in any language is taken as literate. A person who can only read but cannot write is not literate. It is not necessary that to be considered as literate, a person should have received any formal education or passed any minimum educational standard. Literacy could also have been achieved through adult literacy classes or through any non-formal educational system. People who are blind and can read in Braille are treated as literates.

Literacy rate :

Literacy rate of the population is defined as the percentage of literates in the age group seven years and above. For different age groups the percentage of literates in that age group gives the literacy rate.

Educational level :

The highest level of education a person has completed.

Work :

Work is defined as participation in any economically productive activity with or without compensation, wages or profit. Such participation may be physical and/or mental in nature. Work involves not only actual work but also includes effective supervision and direction of work. It even includes part time help or unpaid work on farm, family enterprise or in any other economic activity. All persons engaged in 'work' as defined above are workers. Persons who are engaged in cultivation or milk production even solely for domestic consumption are also treated as workers.

Reference period for determining a person as worker and non-worker is one year preceding the date of enumeration.

Main worker :

A person who has worked for major part of the reference period (i.e. six months or more during the last one year preceding the date of enumeration) in any economically productive activity is termed as 'Main worker'.

Marginal worker :

A person who worked for less than six months of the reference period (i.e. in the last one year preceding the date of enumeration) in any economic activity is termed as 'Marginal worker'.

Non worker :

A person who has not worked at all in any economically productive activity during the reference period (i.e. last one year preceding the date of enumeration) is termed as 'Non worker'.

Cultivator :

For purposes of the Census a person is classified as cultivator if he or she is engaged in cultivation on land owned or held from government or held from private persons or institutions for payment in money, kind or share. Cultivation includes effective supervision or direction in cultivation. A person who has given out her/his land to another person or persons or institution(s) for cultivation for money, kind or share of crop and who does not even supervise or direct cultivation in exchange of land, is not treated as cultivator. Similarly, a person working on another person's land for wages in cash or kind or a combination of both (agricultural labourer) is not treated as cultivator. Cultivation involves ploughing, sowing, harvesting and production of cereals and millet crops such as wheat, paddy, jowar, bajra, ragi, etc., and other crops such as sugarcane, tobacco, ground-nuts, tapioca, etc., and pulses, raw jute and kindred fiber crop, cotton, cinchona and other medicinal plants, fruit growing, vegetable growing or keeping orchards or groves, etc. Cultivation does not include the following plantation crops - tea, coffee, rubber, coconut and betel-nuts (areca).

Agricultural labourer :

A person who works on another person's land for wages in money or kind or share is regarded as an agricultural labourer. She/he has no risk in the cultivation, but merely works on another person's land

for wages. An agricultural labourer has no right of lease or contract on land on which she/he works.

Household industry worker :

Household industry is defined as an industry conducted by the head of the household herself/himself and or by the members of the household at home or within the village in rural areas and only within the precincts of the house where the household lives in urban areas. The larger proportion of workers in household industry should consist of members of the household including the head. The industry should not be run on the scale of a registered factory which would qualify or has to be registered under the Indian Factories Act and should be engaged in manufacturing, processing, servicing and repairs of goods. It does not include professions such as a pleader, Doctor, Musician, Dancer, Waterman, Astrologer, Dhobi, Barber, etc. or merely trade or business, even if such professions, trade or services are run at home by members of the household.

Other Worker :

A person who has been engaged in some economic activity during the reference period but not as a cultivator or agricultural labourer or in Household Industry is termed as a 'Other Worker (OW)'. The type of workers that come under this category of 'OW' include all government servants, municipal employees, teachers, factory workers, plantation workers, those engaged in trade, commerce, business, transport, banking, mining, construction, political orsocial work, priests, entertainment artists, etc. effect, all those workers other than cultivators or agricultural labourers or household industry workers, are 'Other Workers'.

Work Participation Rate :

Percentage of workers (main + marginal) to total population

Population density :

Population density is the number of persons inhabited per square kilometre of the area.

Age :

Age is measured in terms of the completed number of years

Sex-Ratio :

Number of females per 1000 males in a population.

(vi)Non Census Concepts

Improved drinking water :

If the household had access to drinking water supplied from a tap, hand pump, tube well or well (protected or covered) situated within or outside the premises, it is considered as having access to improved drinking water. It may be mentioned that such uniform definition may not be valid across all states.

System of sewerage :

Generally, a sewerage system would mean a network of mains and branches of underground conduits for the conveyance of sewerage to the point of disposal. Sewers that carry only household and industrial wastage are called separate sewers; those that carry storm water from roofs, streets and other surfaces are known as storm water drains, while those carrying both sewage and storm water are called combined sewers. However, in some towns which are not provided with such underground sewerage system, it is served by open surface drain, box drain, sylk pattern drain, etc., in these towns.

Type of latrine and Method of disposal of night soil :

There are three prevalent systems of disposal of human wastes, viz.(i) underground sewerage, (ii) sanitary water flush latrines with individual disposal systems, like septic tank, leaching cess pool and collecting well, and (iii) dry type of latrines with manual scavenging. The system of underground sewerage provides for the street sewerage with which are connected the sanitary latrines constructed in the houses having water closets and fitted with flushing cistern (or hand flushing). Through this sewer the faecal matter is transported without the need for scavenging. This system generally exists in cities and big towns. Where the streets sewer does not exist these sanitary water flush latrines are connected to a local septic tank with a sub-soil dispersion system or a leaching pit. Here the liquid wastes from the water closet is disposed of locally in leaching pit, a septic tank with a soil dispersion system is constructed. This dispersion requires an optimum travel through the pores of the soil which renders the harmful liquid bacterially innocuous by the slow process of filtration through the soil

traversed. Where the soil is impermeable, collecting wells are constructed and the sanitary water flush latrines are connected with them. These wells are cleaned at periodic intervals by a suitable device. The dry type of latrines are of service type latrines from where human excreta is removed by scavengers from house to house, in most cases carrying it on their heads or shoulders or in baskets with handle or wheel barrows. These are then collected in bullock carts or trucks or tractors and trolleys for being carried to the dumping grounds.

Fertility :

In demography, the word fertility is used in relation to the actual production of children or occurrence of births specially live births. Fertility is a measure of rate at which population adds to itself by births and normally assessed by relating the number of births to a full or part of the population, such as number of married women or number of women of child bearing age. The definitions of the terminology used in computing different fertility rates are mentioned below:

Crude birth rate(CBR) :

Ratio of the number of live births in a year to the mid year population, normally expressed per 1000 population.

$$CBR = \frac{\text{Number of live births during the year}}{\text{Mid – year Population}} \times 1000$$

Crude death rate(CDR) :

Ratio of the number of deaths in a year to the mid year population, normally expressed per 1000 population.

$$CDR = \frac{\text{Number of deaths during the year}}{\text{Mid year Population}} \times 1000$$

Natural growth rate :

Growth rate is obtained as the difference between crude birth rate and crude death rate in the absence of migration.

Age specific fertility rate (ASFR) :

Number of live births in a year to female population in any specified age group normally expressed per 1000 women.

$$ASFR = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year female population of the same age-group}} \times 1000$$

Age specific marital fertility rate (ASMFR) :

Number of live births in a year to married female population in any specified age group normally expressed per 1000 married women.

$$ASMFR = \frac{\text{Number of live births in a particular age-group}}{\text{Mid-year married female population of the same age-group}} \times 1000$$

General fertility rate (GFR) :

Number of live births per 1000 women in the reproductive age-group (15-49) years in a given year.

$$GFR = \frac{\text{Number of live births in a year}}{\text{Mid-year female population in the age-group (15-49) years}} \times 1000$$

General marital fertility rate (GMFR) :

Number of live births per 1000 married women in reproductive age-group (15-49) years in a given year.

$$GMFR = \frac{\text{Number of live births in a year}}{\text{Mid-year married female population in the age-group (15-49) years}} \times 1000$$

Total fertility rate (TFR) :

It is obtained as the total of the age specific fertility rates (number of children born per woman of the particular age) for the entire reproductive age span. It provides the average number of children that will be born to a woman under the fertility levels indicated by the age specific fertility rates assuming that there is no mortality of women till the completion of reproductive period.

$$TFR = \frac{5 \times \sum_{15-19}^{45-49} ASFR}{1000}$$

Total marital fertility rate (TMFR) :

Average number of children that would be born to a married woman if she experiences the current fertility pattern throughout her reproductive span 15-49) years assuming that there is no mortality of women till the completion of reproductive period.

$$TMFR = \frac{5 \times \sum_{15-19}^{45-49} ASMFR}{1000}$$

Age-specific mortality rate (ASMR) :

Number of deaths in a particular age and sex group per 1000 population of the same age group.

$$ASMR = \frac{\text{Number of deaths in a particular age-group}}{\text{Mid-year population of the same age-group}} \times 1000$$

q_1 :

Probability of dying between birth and age 1. This can be used as approximate value of Infant Mortality Rate (IMR) which gives the ratio of number of deaths in a year of children aged less than one year to the number of births in that year.

q_2 :

Probability of dying between birth and age 2.

q_5:

Probability of dying between birth and age 5. This indicator is also known as Under Five Mortality Rate (U5MR)

Infant mortality rate (IMR) :

Ratio of the number of infant deaths (deaths of children below one year) in a year to the number of live births in that year.

$$IMR = \frac{\text{Number of infant deaths during the year}}{\text{Number of live births during the year}} \times 1000$$

Infant mortality rate comprises of two parts, viz., Neo-natal mortality rate and Post neo-natal mortality rate. The neo-natal mortality rate also comprises of two parts viz., Early neo-natal mortality rate and late neo-natal mortality rate. These are defined as:

Neo-natal mortality rate (NMR) :

Number of infants dying within the first month of life (28 days or under) in a year per 1000 live births of the same year.

$$NMR = \frac{\text{Number of infant deaths aged 28 days or under during the year}}{\text{Number of live births during the year}} \times 1000$$

Early neo- natal mortality rate :

$$ENMR = \frac{\text{Number of infant deaths of less than 7 days During the year}}{\text{Number of live births during the year}} \times 1000$$

Late neo-natal mortality rate :

$$LNMR = \frac{\text{Number of infant deaths of 7 days to less than 29 days during the year}}{\text{Number of live births during the year}} \times 1000$$

Post neo-natal mortality rate (PNMR) :

$$PNMR = \frac{\text{Number of deaths of 29 days to less than one year during the year}}{\text{Number of live births during the year}} \times 1000$$

Peri-natal mortality rate (PMR) :

Number of still births plus deaths within 1st week of delivery per 1000 births in a year.

$$PMR = \frac{\text{Number of still births and infant deaths of less than 7 days during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

Still birth rate(SBR) :

$$SBR = \frac{\text{Number of still births during the year}}{\text{Number of live births and still births during the year}} \times 1000$$

Maternal mortality rate(MMR) :

Number of deaths of women in the age group 15-49 while pregnant or within 42 days of termination of pregnancy from any cause related to pregnancy and child birth per 1,00,000 live births in a given year.

$$MMR = \frac{\text{Number of maternal deaths to women in the age group 15-49}}{\text{Number of live birth}} \times 100000$$

Eligible couple (Couples per 1000 population) :

Number of currently married females in the age group15-44 years per 1000 persons of all ages.

Child woman ratio (0-4) :

Number of children in the age group 0-4 years per 1000 women in the age group 15-49 years.

Child woman ratio (5-9) :

Number of children in the age group 5-9 years per 1000 women in the age group 15-49 years.

Migration :

Migration is the third component of population change, the other two being mortality and fertility. A person is considered as a migrant by place of birth if the place in which he/she is enumerated during the census is other than the place of his/her birth. Similarly a person is considered as a migrant by place of last residence if the place in which he/she is enumerated during the census is other than his/her place of immediate last residence outside the village or town and not simply in another house or locality in the same village or town. Certain aspects concerning temporary movement/ migration of people has been explained below as these are important components concerning migration :

(i) Migration of persons in search of job is high in the country. In many cases such migrants are only seasonal in nature. People migrate to other places for work in a particular season and come back again to their usual place of residence after three or four months. All such workers are treated as migrants. Similarly, if a person moved to any other place for attending short term vocational or educational course that lasted for only few months of a year, she/he too were considered as a migrant.

(ii) Where a person had merely gone out to another place or had been shifting from one place to another purely on tour, pilgrimage, visit to hospital for treatment or for temporary business purposes, such persons are not deemed to have had another residence different from the place where she/ he or her/his family normally resides. She/he is not considered as migrant.

(iii) A woman temporarily moves into a hospital or to her parents or other relative's house for delivery and if the hospital or the parents/ relatives houses is in a place different from usual place of residence, the place where the hospital or parents/relative's house is the place of last residence of the child but not of the mother. A new response category 'Moved after birth' was added in Census of India 2001 in the question on 'reasons for migration' to bring out additional migration patterns. Natural calamities or distress migration as a reason for migration for last residence migrants included in 1991 Census, is covered under category of 'Others'. The reason for migration has been determined as applicable at the time of migration and not in reference to any point of time after that. For example, if a person had moved from the place of her/his last residence for the purpose of education and subsequently at some point of time got employment there only, the reason for migration would be 'education' and not 'work / employment'.

Internal and International migration :

The migrational movements are of three types

(i) Migration within the state itself with its components

  (a) Migration within the district of enumeration (intra district migration)

  (b) Migration from one district of state to another district of state (inter district migration),

(ii) Migration from one state to another State of the country (inter-state migration),

(iii) Migration from one country to another country. The first two streams together constitute internal migration, while the last type of movement is called international migration. The present name of the country, state or district and not the name by which they were known at the time of her/his birth or last residence were recorded.

Rural - Urban components of migration :

Rural or Urban status in respect of migrants have been determined as applicable at the time of migration and not with reference to any point of time after that.

The flow of migrants consists of four streams viz. rural to rural, rural to urban, urban to rural and urban to urban.

Civic status of urban units :

Civic Status of a town/city is determined on the basis of Civic Administrative authority of the towne.g., Municipal Corporation/Corporation, Municipal Committee/ Municipal council, Municipality etc.

Size class of UA/town :

Size-class of UA/Town is based on the population size of the UA/City/Town UAs./Towns with 1,00,000 and above population are classified as Class I UAs./ towns. These Class I UAs./towns are now furthersub classified in to seven sub classes namely M1 toM7 depending on the population size of UA/CityTown. These are M7(5,000,000 and above);M6(2,000,000 to 4,999,999); M5 (1,000,000-1,999,999) M4 (500,000-999,999); M3(300,000-499,999), M2 (200,000-299,999) and M1 (100,000-199,999). towns with, 50,000 to 99,999 population are classified as Class II towns, 20,000 to 49,999 population are Class III towns, population with 10,000-19,999 are Class IV towns, population with 5000 and 9999 are Class V towns and towns with less than 5000 population are Class VI towns.

Slum area :

The Slum Areas (Improvement and Clearance) Act, 1956 which was enacted by the Central Govt. defined slums as

a) Areas where buildings are in any respect unfit for human habitation; or

b) are by reasons of dilapidation, overcrowding, fault arrangement and design of such buildings, narrowness or faulty arrangement of streets, lack of ventilation, light or sanitation facilities, or any combination of these factors, are detrimental to safety, health or morals.

Mega city

The concept of 'Mega city' is a recent phenomenon in the Urban Sociology and is defined in term of metropolitan city in the form of large size, problem of management of civic amenities and capacity to absorb the relatively high growth of population. Indian Census in 1991 treated the population size of 5 million and above as the cut off point to identify a place as the mega city. Whereas, for the purpose of inclusion in Centrally Sponsored Scheme for Infrastructure Development in Mega cities the Ministry of Urban Affairs and employment, Department of Urban Development adopted the criteria of 4 million and above population as per 1991 Census for Mega Cities. In 2001 Census, cities with 10 millions and above population have been treated as Mega cities.

(vii) 2001 Census findings – Population, its distribution

According to Census 2001, Raigarh district comprises of 1433 inhabited villages, 44 uninhabited villages and total 1477 villages distributed among 6 tahsils and 9 number of CD blocks. The district has 5 towns. The average household size of the district is 4.7. Total population of the district is 1265529 comprising 634597 males and 630932 females. Thus the sex ratio of the district works out to 994 which is better than the sex-ratio of the state. Density of the district is 192 persons per sq.km. and is higher than the density of the state which is 154. Literacy rate of the district 70.2 per cent is also higher than the State literacy rate 64.7 per cent. Scheduled Castes and Scheduled Tribes population of the district is respectively 14.2 per cent and 35.4 per cent of the total population of the district. Apart from these general findings, the analysis on various parameters like rural-urban distribution of population by sex, literacy, density, caste, tribe etc. has been covered in the Inset Tables from 1 to 52 based on PCA, Village Directory data, Town directory data and houselisting data pertaining to Census, 2001.

(viii) Brief analysis of the PCA data (Table 1-36)

Analysis of the PCA data based on Census 2001 is presented here in the form of tables from 1 to 36. Various demographic indicators such as density, literacy, Sex-ratio and distribution of population in different economic activity by rural/ urban, male/female and age classifications are presented in these tables. These analysis are presented for Tahsils and CD Block levels separately.

Analysis for Scheduled Castes and Scheduled Tribes is also covered in these tables.

This table indicates tahsilwise decadal variation for both the rural and urban areas of the district. It is seen from the table that an overall 18.7 per cent decadal growth has been recorded in the district. The growth rate in rural areas of the district during the decade 1991-2001 works out to 18.0 per cent, while for urban areas it is 23.4 per cent. Among the tahsils, Raigarh has registered the highest decadal growth rate of 24.3 per cent. The growth rate is highest in Raigarh tahsil for rural and urban area of the district. The per centage of urban population to total population of the district is 13.4 per cent in 2001 against 12.9 per cent in 1991.

Table 2 gives CD Blockwise population, number and percentage of villages falling in each range of population size of villages and number of males and females in each population range at CD Block level in the district. Out of the 1433 inhabited villages, 139 (9.7 per cent) are small sized villages with population below 200 persons. In the size class of 200-499 persons, there are 446 villages having 31.1 per cent villages of the district while in the size class of 500-999 population there are 501 villages constituting 35.0 per cent of total villages. 278 villages (19.4 per cent) are in the size class of 1000-1999 and 66 villages (4.6 per cent) are in the size class of 2000-4999. 3 villages (0.2 per cent) are in the size class of 5000-9999. There are no villages available in the size class of 10,000 and above.

Density of Population (Rural) of the district:			221.8	

This table shows the distribution of villages by population density ranges. The inhabited villages of the district have been grouped under 8 different ranges of density. The maximum number of villages i.e. 421 accounting for 29.4 per cent of the total inhabited villages of the district fall in the density range of 101-200 persons having 26.9 per cent population. The lowest range of 0-10 and 11-20 persons per sq.km. cover 10 villages (0.7 per cent). There are 91 villages in highest range of 501 and above density range constituting 10.9 per cent of population. In the renge of 201-300 and 301-500 the number of villages are 378 and 407 respectively. Highest percentage of population 32.6 per cent is in the population density range of 301-500, and lowest 4 villages in the range of 11-20.

Table 10 presents the sex ratio of population in the age group 0-6 years and sex ratio for total, rural and urban areas in respect of each tahsil of the district. The total sex ratio in this age group works out to 964 in the district. The proportion of females in rural areas is higher than that of urban areas. The sex ratio in rural and urban areas comes to 969 and 933 respectively.The sex ratio of tahsils varies between highest in Gharghoda (996) and lowest in Raigarh (952).

Table 12 shows the distribution of villages in 9 ranges of sex ratio of the age group 0-6 years as well as percentage of villages, total population and percentage of population of this age group falling in each range of sex ratio in the district.

The maximum number of villages i.e. 388 (27.1 per cent) having largest population (22.0 per cent) in the district (rural) fall in the sex ratio range of 1100 and above. It is followed by the sex ratio range of 1000-1099 which claims 262 villages (18.3 per cent) and 19.6 per cent population. Next to it 162 villages (11.3 per cent) and 14.6 per cent population are in the range of 900-949. Minimum number of villages i.e.55 (3.8 per cent) and 2.8 per cent population fall in the range of 700-749.

It can be seen from the table 34, the economy of the district is primarily agricultural as supported by the fact that cultivators constitute 40.9 per cent of the total workers (main + marginal), 38.9 per cent of total workers are engaged as agricultural labourers, 2.4 per cent as Household industry workers and 17.8 per cent as other workers in this district.

The distribution of workers by four categories of economic activity at tahsil shows very high dependence of population on agriculture sector absorbing large number of workers. The proportion of cultivators varies between 27.3 per cent in Raigarh tahsil and 54.7 per cent in Udaipur(Dharamjaigarh) tahsil. These variations within the district may be due to cropping and land holding patterns. The percentage of females cultivators is 38.6 per cent as compared to 42.6 per cent of male cultivators in the district. The highest proportion of 33.8 per cent of other workers is recorded in Raigarh tahsil while the lowest proportion of 8.3 per cent is found in Lailunga tahsil.

Table 35 presents CD Blockwise distribution of workers by sex in four categories of economic activity. In the rural areas of the district total workers (main + marginal) constitutes 50.2 per cent of total population. Among these workers cultivators constitute 44.4 per cent, agricultural labourers 42.1 per cent, household industry 2.3 per cent and other workers constitute 11.2 per cent. The proportion of cultivators is highest 56.4 per cent in Dharamjaigarh CD Block and is lowest 31.7 per cent in Raigarh CD Block. Proportion of agricultural labour is highest 50.0 per cent in Pusaur CD Block and lowest 32.3 per cent in Dharamjaigarh CD Block. It is also seen that the proportion of male workers is more than female workers under the category of cultivators.

Table 36 presents the distribution of workers by sex in different categories of economic activity for UA/ Towns of the district. It is seen that out of the 30.5 per cent of total workers, cultivators constitute 4.0 per cent, agricultural labourers 4.9 per cent, household industry 3.3 per cent and the highest proportion is covered by other workers which is 87.8 per cent. It is also found that proportion of male workers under other workers is more than female workers whereas proportion of female workers under cultivators, agricultural labourers and

Household industry workers is more than the proportion of males. Townwise analysis shows that the proportion of cultivators is highest 20.2 per cent in Dharamjaigarh(NP), agricultural labourer is highest 26.8 per cent in Dharamjaigarh(NP), household industry workers is highest 12.5 per cent in Sarangarh(NP) and other workers is highest 96.2 per cent in Raigarh(M).

(ix) Brief analysis of Village Directory and Town Directory data (table 37-47)

Analysis based on Village Directory and Town Directory data pertaining to census 2001 are presented in the form of Inset tables from 37-47. Alongwith the census data 'Non-Census' data such as village amenity and town amenity data was collected during census 2001. These tables give the number of total villages, proportion of population served by different amenities, availability of amenities by distance, proportion of slum population in towns etc. A short analytical note is also given below of each table.

* Based on the improved drinking water source, drinking water supply has been classified as 'Improved ' or otherwise. If the household has access to drinking water supplied from a tap or a hand pump / tube well situated within or outside the premises it is considered as having access to 'Improved drinking water source'. However, the concept of improved drinking water is state specific and this is to be considered accordingly.

Post office includes Post office, telegraph office and Post and telegraph office.

$ Transport communication includes bus service, rail facility and navigable waterways.

Table 37 deals with the CD block-wise distribution of villages according to the availability of different amenities like education, medical, improved drinking water, post office, telephone, transport, communications, agricultural credit societies, approach by pucca road and power supply within the village. Out of 1,433 inhabited villages in the district 1,350 villages or 94.2 per cent has been provided with the education facilities of one type or the other. Similarly 279 villages in the district constituting 19.5 per cent have medical facilities of one type or the other. Improved drinking water facility is available in 1390 or 97.0 per cent villages.

As regards, post office facility which includes facilities like telegraph office and post and telegraph, 272 villages constituting 19.0 per cent of villages have been provided with post office facility within the villages. 150 or 10.5 per cent villages have been provided with the telephone facility, 260 or 18.1 per cent with transport facility, 28 or 2.0 per cent villages with bank facility and 58 or 4.0 per cent with agricultural credit societies. Similarly there are 370 or 25.8 per cent villages which have been linked with the pucca road. Total 1,385 or 96.7 per cent of villages have been provided with the electricity supply. Almost similar pattern of distribution of villages by availability of amenities in the villages at CD block has been found with slight variation. The percentage distribution of telephone facility in Lailunga CD Block is however far less than other CD Blocks. Kharsia CD block has the highest 99.3 per cent villages where educational facility is available and lowest 89.0 per cent is found in Sarailendha(Baramkela) CD Block. Medical facility is highest in Raigarh (41.5 per cent) and lowest (1.1 per cent) in Sarangarh CD block. Improved drinking water is not available to cent per cent in any villages while in Dharamjaigarh it is 98.9 per cent. Telephone facility is highest in Kharsia CD Block (17.6 per cent) and it is lowest in Lailunga (1.7 per cent). In the field of power supply all villages have been covered except 48 villages in the district.

Table 38 depicts the number and proportion of rural population served by different kind of amenities. Out of total rural population of 1,096,073 persons in the district, 1,083,884 or 98.9 per cent have educational facility of one or the other type. Similarly 341,303 or 31.1 per cent population has medical facilities while 1,065,243 or 97.2 per cent have got improved drinking water facility. Post office facilities are available to 399,514 or 36.4 per cent population. Telephone facility is available to 198,977 or 18.2 per cent. Transport communications facility is available to 317,544 or 29.0 per cent. Bank facility is available to 66,564 or 6.1 per cent. 102,149 or 9.3 per cent have been provided with the facility of agricultural credit societies. 429,998 or 39.2 per cent have been provided with the facility of approach by pucca road. Power supply is available to 1,080,917 or 98.6 per cent rural population in the district. Similar pattern of availability of facilities is visible to the rural population in different CD blocks.

Table 39 presents distribution of villages not having certain amenities within the village at district level. Such villages have been presented according to various distance ranges in this table. 83 villages do not have primary school and out of these villages, children of 75 villages have to travel less than 5 kms. for schooling. Out of 1,433 inhabited villages as many as 1,094 are deprived of middle school and 1430 of degree college. Of these 869 avail the facility of middle school at a distance of less than 5 kms., 200 at a distance 5-10 kms. and the remaining 25 at a distance of 10+ kms. In respect of degree college 79 avail this facility at a distance of less than 5 kms., 198 between 5 to 10 kms. and rest 1153 villages at a distance of 10+ kms.

Similarly there are 1425 villages in the district which have been devoid of Hospital facility and 1413 villages which are do not have PHC facilities. Of these 171 villages have the facility of Hospital available within 5 kms. while in respect of 384 villages the inhabitants have to cover a distance of 5-10 kms. in order to avail this facility. Similarly 870 villages have this facility at a distance of 10+ kms. As regards PHC 162 avail this facility at a distance of less than 5 kms., 329 at a distance of 5-10 kms. and the remaining 922 have to travel a distance of more than 10 kms. to avail this facility.

Regarding Post Office, 1161 villages do not have this facility in the village itself. Of these majority i.e. 880 have this facility at a distance of less than 5 kms., another 237 villages avail it at a distance of 5-10 kms.

In the remaining 44 villages habitants have to travel a distance of 10+ kms.

As regards Telephone, there are 1283 villages in the district which are without telephone facilitiy. Of these 440 avail this facility at a distance of less than 5 kms., 270 at a distance of 5-10 kms. and remaining 573 have to traverse a distance of 10+ kms.

For Bus service out of 1,180 villages which do not have the facility, 551 villages avail this facility at a distance of less than 5 kms., 388 at a distance between 5-10 kms. and 241 at a distance of 10+ kms.

In the entire district 1,415 villages are don't have of Commercial Banks and 1,413 do'nt have Co-operative Bank. Of these 1,415 villages which are do not have Commercial Banks 269 villages avail this facility at a distance of less than 5 kms., 426 between 5-10 kms. and the remaining 720 at a distance of 10+ kms. Regarding Co-operative Banks out of 1,413 villages 287 villages avail this facility at a distance of less than 5 kms., 440 at a distance of 5-10 kms. and remaining 686 at a distance of 10+ kms. 1375 villages do not have agricultural credit societies. This facility to 474 villages is available at a distance of less than 5 kms., 441 at a distance of 5-10 kms. and the remaining 460 at a distance of 10+ kms.

Data source: Census of India 2001, H-series: Tables on Houses, Household amenities and Assets.

Note: Percentage is given in brackets below the number of households.Bathroom means bathroom within the house Toilet means toilet within the house. Drainage menas closed and open drainage.

Table 50 indicates that 68.5 per cent households in the district have been provided with improved drinking water supplied from a tap or a hand-pump/ tube-well, 60.7 per cent households have provision of electricity in their houses. The bathroom facility is available to only 6.8 per cent households within their premises . As regards rural areas, 2.7 per cent households are having bathroom facility, whereas this proportion in urban areas comes to 36.0 per cent. 56.8 per cent rural households have facility of electricity against 88.1 per cent in urban areas.Toilet and drainage facilities in the district are available to 11.6 per cent and 19.1 per cent households respectively. Their percentage is higher in urban areas as compared to rural areas. The trend of these amenities available to the households at tahsil level is almost confirm to the district pattern analysed.

Percentage in brackets

Data source: Census of India 2001, H-series: Tables on Houses, Household amenities and Assets.

The percentage distribution of households by type of fuel used for cooking purposes is given in Table 51. There are nine types of fuel used for which data have been presented in the table. It is observed that wood is used as the most predominant fuel used for cooking by 87.3 per cent households in the district. In the tahsils,

this proportion varies between 75.1 per cent in Raigarh and 96.8 per cent in Lailunga tahsil. In rural areas use of wood for cooking is very high while in urban areas it is used by less of population due to availability of L.P.G. The next cooking fuel is L.P.G which is used by 3.7 per cent households in the district. This proportion in urban and rural areas is 24.9 and 0.8 per cent respectively. In rural areas use of gas for cooking is very low as compared to urban areas at tahsil level.The use of Cowdung cake is 3.1 in district.The proportion in urban and rural areas is 0.4 and 3.5 respectively.There are 2.3 per cent households using crop residue in the district. Use of crop residue for cooking by rural households comes to 2.2 per cent while in urban areas its proportion is only 2.4 per cent. There are 1.5 per cent households using kerosene in the district. Use of kerosene for cooking by urban households comes to 8.1 per cent while in rural areas its proportion is only 0.6 per cent. The percentage of households using other types of fuel is insignificant. Firewood is the predominant cooking fuel in both the rural and the urban area of the district.

Data source: Census of India 2001, H-series: Tables on Houses, Household amenities and Assets.

This table presents data for total, rural and urban areas at district and tahsil level about households availing banking services and possession of assets such radio/ transistor, telephone, bicycle, scooter and car etc. by the households. There are 269,245 households in the district and among them, 50,922 households have been availing banking services. 54,321 households have as Radio/Transistor.Television is possessed by 45,114 households. Telephone is available in 7,886 households. Bicycle is the most common means of transportation and is available in 167,701 households. Scooter/ Motor cycle/ Moped and Car/ Jeep/ Van are used by 24,604 and 3,491 households respectively. The picture in use of banking services and possession of assets by households at tahsil level is almost similar as analysed above for the district as a whole.

(xi) Major Social and cultural events, natural and administrative developments and significant activities during the decade.

i) A new district Jashpur is carved out from erstwhile Raigarh district in 22.5.1998 vide M.P. Govt. notification no. 1006-F-20.8.1992-sha-8.

ii) Formation of Lailunga tahsil by transfer of 123 villages of Gharghoda tahsil which belonged to erstwhile Lailunga CD block on 2.5.1998.

(xii) Brief description of places of religious, historical or archaeological importance in villages and places of tourist interest in the towns of the district.

(i) Raigarh:- Raigarh town is situated on the bank of river Kelo, it is one of the important railway stations on the Mumbai Howrah main line of the South-Eastern Railway.Raigarh is well known for Dhokra casting an art of producing metalwork by tthe process of hot wax casting also a producer of two types of silk i.e Tussar silk and Mulburry silk based on Kosa silk. Among the temples Gaurishankar Mandir is the only famous temple in the District town. In the field of industry , the town has a jute mill and Jindal Sponge Iron Factory.

(ii)Singhanpur:- The important Centere of unique rock paintings of prehistoric period is situated about 19 km north of Bhupdeopur (formerly Naharpali) on the Nagar-Howrah main line of South Eastern Railway. Artistically though the paintings are not of high quality spirited expression and spontaneity of treatment are the chief artistic features of the Singhanpur paintings. There are highly interesting suggesting Australian affinities on the one hand and connections with Eastern Spanish art on the other. There are other rock shelters containing paintings of the same period in the vicinity. There are at "kabra-pahar" about 16 km to the South-East of Raigarh. The paintings depict men in rows; animals, reptiles and beasts in red colour.

(iii) Sarangarh:- Sarangarh town is situated at a distance of about 46 km to the south west of Raigarh district. The town contains an old temple, dedicated to Samleshwari Devi, said to have been built in A.D. 1692 by a Diwan of Sarangarh state. A noteworthy palace, and a group of temples built on the northern bank of famous Khera band tank. As many as four important fairs are annually held at the place. Rathayatra fair is held in (June/ July) , Dusshera fair in (September/October), Vishnu Yajna Mela in (January) and as urs managed by Muhammadan community lasts for two days.

(iv) Pausar:- Pausar is situated to the South of the tahsil headquarter at a distance of 19 km. The important large village, containing a temple of Lord Jagannatha has a number of irrigation tanks.Pausar is famous for manufacturing of brass and bell-metal products.

(v) Pujaripali :- In Sarangarh tahsil, lying to the north east of Sarangarh there are three noteworthy temples now in ruins which were originally built in large sized bricks. The exterior angles of these temples are ornamented in rib bed design like the top stone of a shrine. The architraves of these shrines were once supported by carved stone pillars, one of which contained probably the figures of Ganga and Yamuna with umbrellas overhead.

(vi) Ram Jharna:- It is about 18 kms from the district headquarters. It has a natural water source. According to History, Bhagwan Ram once had been here during his exile and had drank water from the water source. Hence the name Ram Jharna came into existence , it is a very good picnic spot .

(vii) Gomarda Reserve Forest:- It is situated in Sarangarh tahsil. It is spread over 278 sq. kms. It is a natural home for many wild animals like tigers, bears etc. It is about 60 kms. from the district headquarters.

(xiii) Major characteristics of the district, contribution of the district in the form of any historical figure associated with the district.

Raigarh district is famous for kosa clothes, artistic bronze productrs and utensils. In the field of leading large scale industry the District has a jute mill and Jinda; sponge iron factory. The tribes are in majority in this district. "Oraon" is the predominant tribe. In this district most important festival is known "Sarhal" when the marriage of sun God and mother earth is celebrated. Folk-dance is an important festival Oraon tribe. Since decades people of the district have faith in superstitions and they do believe in devils and ghosts. People of this district live together with communal harmony, brotherhood affable and simple living. Land is fertile and people are industrious, but they have not gained much as they desired, due to lack of basic economic resources.

(xiv) Scope of Village Directory and Town Directory

Village Directory :

The Village Directory is one of the traditional compilations of the census organisation and provides the consolidated picture of each village as revealed by the availability of existing amenities, land use pattern, composition of its population and other infrastructural details. This will be of immense help to identify the areas of surplus and deficit requiring the attention of planners and administrators for rescheduling the development process in appropriate direction. The format of village directory has 25 columns providing village-wise data of location, area, population, land use pattern and amenities etc.

The details of each column of village directory are explained as below :

Column-1 Serial number of the village is indicated in this column.

Column-2 gives the name of the village and permanent location code number (PLCN) assigned to each village in serpentine manner from north-west to south direction and is essential for identification of village. The concept of permanent location code number has been introduced first time in 2001 Census by assigning eight digit number starting from the first village of the first tahsil of first district of the state to the last village of last tahsil of the last district. In the state of Chhattisgarh first PLCN 00000100 has been assigned to village 'BADWAHI' in Bharatpur tahsil of Koria district which happens to be first village, tahsil and district while the last PLCN of 02030800 has been assigned to the last village 'SINKAWAYA' of the state in Konta tahsil of Dantewara district which happen to be last as per procedure adopted for assigning location code number. The district census handbook of 1991 Census as well as updated district and tahsil maps and services of local revenue officers/ officials have been used to assign the PLCN to the villages. The last two zeros will be used if new villages are created out of existing villages in subsequent census. Before 2001 census, village location code number used to change from one census to other due to change in jurisdictions or creation of villages or merger of villages in urban areas. The district handbook of 1991 Census has been used as basis for filling up the name of the village including the forest and uninhabited villages. But to ensure the accuracy, the list of villages and their names were got authenticated from the respective Tahsildar of each tahsil.

Column-3 shows the area (in hectares) of the village as indicated by the State Revenue Department.

Columns – 4 and 5 gives the population and number of households in each village which facilitate the correlation between the amenities available to the population and number of households in the village.

Columns 6 to 9 deal with the amenities like education, medical, drinking water, post, telegraph and telephone etc. The information relating to these amenities were filled by the Patwari of concerned village in village directory booklet which were subsequently cross checked with district census

handbook of 1991 as well as with the information collected from the various departments to ensure the accuracy of information provided. In such cases where no facility is available within a village, a dash (-) has been shown in the column and next to it in brackets, the distance from the village in broad ranges viz. upto 5 kms., 5-10 kms. and 10+ kms. of the nearest place where the facility is available has been given. This will help not only for local area planning but in regulating the provisions of goods and services as well, so as to minimize the regional imbalance in the process of development. The abbreviations used to indicate these amenities have been explained separately in the subsequent section. The list of colleges, senior secondary schools, hospitals, post and telegraph offices in the district as obtained from the concerned departments are also added in the form of annexures at the end.

Column-10 shows the number of banks – Commercial banks and Co-operative banks. In addition to this, the list of banks procured from the lead bank of the district has also been added in this book.

Column-11 relates to number of credit societies, such as agricultural credit societies, non-agricultural credit societies and other cooperative societies.

Column-12 shows the number of recreational and cultural facilities viz. Cinema/video hall, sports club, stadium/auditorium facility available in the villages.

Column-13 Indicates the type of communications amenities such as by bus, railway or navigable waterway available to the village.

Column-14 refers to the state of roads etc. leading to the village. This is useful in determining as to whether the village is approachable both in fair and foul weather by paved road, mud road, foot path and navigable water ways.

Column-16 relates to the availability of power supply to the village with purposes such as domestic, agricultural use, other purposes or for purposes which are denoted by the abbreviations.

Column-17 gives the information as to whether newspapers/magazines are received in the village.

Column-18 gives the information of most important commodities manufactured in the village.

Columns- 19 to 23 give the details about land utilization. The land use pattern given in the village directory conforms to the pattern of classification of land use as recommended by the Ministry of Agriculture, Government of India. The Ministry of Agriculture, has recommended the maintenance of records of land use pattern under five categories. These are as follows :

i) Forests

ii) Irrigated

iii) Unirrigated

iv) Culturable waste (including Gauchar and Groves)

v) Area not available for cultivation

Forest area shown in column-19 includes all lands classed under any legal enactment dealing with forests or administered as forests, whether state owned or private and whether wooded or maintained as potential forest land. The crops raised in the forests and grazing lands or areas open for grazing within the forest is also included under the forest area.

Column 20 and 21 shows area irrigated by different sources of irrigation and un-irrigated area. These two columns cover all agricultural land which equals to net cropped area sown with crops and orchards including current and other fallow lands. In case of irrigated land, the source of irrigation has also been indicated.

Column-22 Culturable waste : This includes all lands available for cultivation whether not taken up for cultivation or taken up for cultivation once but not cultivated during the five years or more in succession.

Such lands may be either fallow or covered with shrubs and jungles which are not put to any use. Lands under thatching grasses, bamboo bushes and other groves for fuel etc., which are not included under orchards or forests come under this column. All grazing lands, whether they are permanent pastures and meadows or not, village common and grazing lands within forest area are also included in this column.

Column- 23 Area not available for cultivation : This includes land not available for cultivation such as barren, unculturable land and land put to non-agricultural use. Land put to non-agricultural use stands for all lands occupied by buildings, roads and railways or under water etc. Barren and unculturable lands cover all lands like mountains and deserts which cannot be put under cultivation, except at a very high cost.

PART B - PRIMARY CENSUS ABSTRACT

Brief note on Primary Census Abstract

The first census of the third millennium and twenty first century the Census of India, 2001 was the 14th continuous and uninterrupted Indian census since 1872. Thus, 2001 Census will provide data on population and its characteristics marking transition from one century and millennium to another.

The gigantic operation of Population Enumeration (considered by many to be the single largest and complex peace time administrative exercise in the world) was made possible due to the door to door universal canvassing of the Household Schedule by about 2 million enumerators and supervisors covering 593 districts, 5,463 sub-districts, 5,161 towns and 638,588 villages. The comprehensive Household Schedule which replaced the individual slip had three parts and two sides A and B. Part I contained the Location Particulars; Part II related to the Individual Particulars and Part III contained questions for Household engaged in Cultivation/Plantation. The part II of the Household Schedule had 39 columns and 23 questions all of which were universally canvassed and no sampling was resorted to during enumeration.

Data Processing

A quantum leap was made in the technology front while processing the Census 2001 data both for Houselisting and Population Enumeration. The Census schedules for both the phases were scanned through high speed scanners in fifteen data centers across the country and hand-written data from the schedules were converted into digitized form through Intelligent Character Reading (ICR) software for creation of ASCII records for further processing. The designing and formatting of the Household Schedule had to be done very carefully using specialized software so as to ensure uniformity, which was an essential pre-requisite for scanning. The selection of appropriate state-of-art technology in data processing has made it possible to produce all the Houselisting as well as Population Enumeration tables on full count basis for the first time in the history of Census. For Census 2001, about 202 million schedules consisting of about 1,028 million records were scanned and processed within a span of only 10 months starting October, 2002.

Task Force on Quality Assurance

After the data is processed, it is expedient on the part of the data producing agency to satisfy itself about its quality before putting the same in public domain. This has to be done mainly through the process of internal consistency, comparison with similar data in the past and also through validation with likewise data if available, from external sources. Quite often the local knowledge and perception has to be brought into play to understand both the existing and the new emerging trends of population distribution and characteristics. The other very important aspect of the data quality is to ensure complete coverage of all geographical areas especially for the population enumeration phase where the data is disseminated right up to the village level in the rural areas and the ward level in the urban areas. Thus ensuring the complete coverage and correct geographical linkage of each enumeration block was one of the major planks of the quality control, specially for small area population statistics.

A very comprehensive check and edit mechanism was put in place to objectively examine the preliminary Census 2001 Population Enumeration results and finally clear them for use. The responsibility of the final clearance of data was with the Task Force on Quality Assurance (TFQA), headed by the Registrar General and Census Commissioner, India. The other members of the TFQA were the Heads and senior officers of the Census Division, Data Processing Division, Map Division, Demography Division and Social Studies Division. The Directors of Census Operations were co-opted as members whenever the TFQA discussed the data for their States/Union territories. The Directors and their senior officers were required to make detailed presentations of data for their own state both in respect to the quality and the coverage and only after the full possible cleared.

There has been a major departure in Census 2001 from the past in respect of the procedure followed for finalization of the Scheduled Castes and the Scheduled Tribes population. In the earlier censuses, the total Scheduled Castes and Scheduled Tribes populations were finalized at the time of the manual compilation of the Primary Census Abstracts (PCA) at the Regional Tabulation Offices which were

specially set up for this purpose. The individual Scheduled Castes and the Scheduled Tribes population for each state was finalized much later based on manual coding done by the coders. In 2001 Census, each individual Scheduled Caste and the Scheduled Tribe have been coded directly on the computers by the Data Entry Operators through a process known as Computer Assisted Coding (CAC) and taken up along with the processing of PCA data. The CAC process involves pulling down, from the relevant dictionary of the Scheduled Castes and the Scheduled Tribes, on the computer screen and coding from the dictionary by referring to the image of the specific individual entry in the Household Schedule appearing on the screen. The CAC of the response on Religion wherever required, was also undertaken along with the processing of PCA. This is because the Scheduled Castes status had to be determined in relation to the religion of the individual. Two Special Task Forces, one on Religion and the other on Scheduled Castes/ Scheduled Tribes were constituted for scrutiny and appropriate classification of these responses.

The main task of the Special Task Force on Religion was to appropriately merge or group the new responses encountered and code it into the appropriate religious community based on available literature and local knowledge. The Special Task Force on Scheduled Castes and Scheduled Tribes examined the different Scheduled Castes and Scheduled Tribes entries encoun-tered and classified these into appropriate category of the Scheduled Castes or the Scheduled Tribes principally based on the Presidential Notification and the available literature. Thus a very systematic and scientific mechanism was operationalised to firm up the individual religion and the individual Scheduled Castes/Tribes returns. The Scheduled Castes and the Scheduled Tribes population in 2001 Census, is thus being finalized by aggregating the population data for individual Scheduled Castes and the Scheduled Tribes at appropriate geographical levels.

The entire work relating to the data validation and scrutiny was completed by all the States/Union Territories under the overall supervision and monitoring of the Census Division of the Office of the Registrar General, India with active cooperation and support of the Social Studies Division, Data Processing Division, Data Dissemination Division and Map Division.

Primary Census Abstract

The Primary Census Abstract which is yet another important publication of 2001 Census gives basic information on Area, Total Households, Total population, Scheduled Castes, Scheduled Tribes population, Population in the age group 0-6, Literates, Main workers and Marginal workers classified by the four broad industrial categories, namely, (i) Cultivators, (ii) Agricultural laborers, (iii) Household Industry Workers, and (iv) Other workers and also Non-workers. The characteristics of the Total Population includes Scheduled Castes, Scheduled Tribes, Institu-tional and Houseless population and are presented by sex and rural-urban residence. This data is presented at different levels, namely, India, States/Union territories, Districts and Cities, Urban Agglomerations (Population 1,00,000 and above) in three different tables. In addition, the Appendix of said publication provides Houseless and Institutional Households and their population by residence and sex for 2001 for India, State and Union territory.

Apart from the India and State/Union Territory volumes for Primary Census Abstract, the District Census Handbook contains District Primary Census Abstract, Appendix to District Primary Census Abstract, Primary Census Abstract for Scheduled Castes, Primary Census Abstract for Scheduled Tribes, Village Primary Census Abstract and Urban Primary Census Abstract of the concerned district in the state.

It was for the first time at the 1981 Census that the Primary Census Abstract (PCA) was brought out for the Scheduled Castes and the Scheduled Tribes separately on the pattern of General Primary Census Abstract. This practice was continued in 1991 also. In the 1961 and 1971 Censuses, such data were made available in Table C-VIII-Social and Cultural table and to some extent in the series 'Special Tables for Scheduled Castes/Scheduled Tribes'.

The format of Primary Census Abstract has been restructured slightly in the 2001 Census as compared to that of 1991 Census. The nine-fold industrial classification of main workers given in the Primary Census Abstract of 1991 Census has been discontinued and its place, four-fold industrial classification of both 'main workers' and 'marginal workers' are included. In

1981 census only main workers were presented in to four categories. One of the novel features of the primary census abstract of 1991 census was the presentation of data of the population of age group 0-6 is continued in 2001 Census also. This will help the data users in better analysis and understanding of this literacy data.

Level of presentation in District Census Handbooks:

The Primary Census Abstract data in different PCAs are presented at different levels. The level of presentation of Primary Census Abstracts are as under:

	Name of the Primary Census Abstract	Level of presentation
1.	District Primary Census Abstract	District/CD Block/UA/City/Town
2.	Primary Census Abstract for Scheduled Castes	District/CD Block/Town
3.	Primary Census Abstract for Scheduled Tribes	District/CD Block/Town
4.	Village Primary Census Abstract	CD Block/Village wise
5.	Urban Primary Census Abstract	Town/Ward level

The PCA Data for villages was presented CD Block wise for the first time in 1991 Census. This practice is continued in 2001 Census also. The data for each CD Block is presented both for rural and urban areas separately. All the villages within the CD Block constitute the rural portion and the Census Towns and Outgrowths are shown under the urban portion of the CD Block. In case a CD Block is spread over two or more districts, than portion which falls within the district is presented, the data pertaining to remaining portion of the CD Block is presented in the concerned District Census Handbook. The data in the Urban Primary Census Abstract for each town as well as for town with outgrowths in the district are presented. The data for all the wards and the outgrowths of the town(s) are also presented separately below the concerned town(s).

The District Primary Census Abstract is presented in 59 columns. The Primary Census Abstract for Scheduled Castes and Primary Census Abstract for Scheduled Tribes are presented in 52 columns. The Village Primary Census Abstract and Urban Primary Census Abstract are presented in 58 columns.

The concepts and definitions used in the column heading are explained under the sub heading 'Census Concepts' in the Analytical Note. The term 'Total Population' includes the Scheduled Castes, the Scheduled Tribes, the Institutional and the Houseless populations. The explanation regarding area figures presented at various level in the Primary Census Abstracts are as follows:

Area Figures

The area figures supplied by local revenue authorities of the district in respect of tehsils, Police Stations and by the local bodies in respect of towns are given in square kilometers. The area figures of the villages supplied by the Tahsildars in acres have been converted and shown in hectares. The area figures of the CD Block is the total of the village areas coming under each CD Block. The area figures for the district are the same as adopted by the Surveyor General of India to maintain uniformity at the national level. The total area figures of all the tahsils/CD Blocks within the district may not tally with area figures of the district because former represents land use area only. Similarly, the total of all the villages may not tally with the entire rural of Police Station/ Tahsil. The difference may be due to the fact that while the area covered by hills, forests and rivers etc, have been accounted in the Tahsils and P.S. level the same may not be covered under the area of the villages. Apart from this it may also differ due to varying methods of computation adopted at different levels.

An appendix to District Primary Census Abstract has also been furnished showing urban enumeration block-wise particulars on Total Population, the Scheduled Castes Population and the Scheduled Tribes Population for each town.

ANNEXURE-II

NOTE ON FERTILITY, MORTALITY AND MIGRATION - 1991 CENSUS

Fertility Levels :

Births, deaths, and migration are three components of population change in any geographical unit. Fertility is a major component of population growth. In the 1991 Census, questions on fertility related to age at marriage, number of surviving children, number of children ever born alive and children born alive during the last year were canvassed to generate the table of fertility. The first three questions were asked to all ever-married women and the last question related to currently married women. The various measures of fertility worked out are based on the district level estimates of fertility and child mortality for 1991.

Mortality analysis is one of the most important branches of demographic studies. This branch deals with the demographic event of death. Since death is a biological phenomenon that occurs just once to each individual, the analysis is simpler than, say, the study of fertility wherein the event of birth can occur with varying frequency among women.

Migration is an important aspect in the area of Population Studies. There is an increase in population of any community or country due to births or in-migration, whereas there is a decrease in the population of its residents due to deaths or migration. In other words, migration is an important reason for the change in size and composition of population. Those areas are affected by migration from where migrants go or where they have gone.

The migration tables of the 1991 Census are mainly based on the questions on place of birth, place of last residence, duration of residence at the place of enumeration and reason for migration included in the individual slip. These tables generated on computer provide the distribution of population by place of birth, distribution of migrants by place of last residence, duration of residence and reason for migration. The data on intra-district, intra-state and inter-state migration streams and in-migration from abroad are presented in these tables.

(Source - Estimate of Fertility Indicators at District Level - M.P.1991)

Chhattisgarh was a part of Madhya Pradesh state during Census 1991. As such the data pertaining to undivided Madhya Pradesh is presented in respect of Chhattisgarh state.

The table reveals that all the measures of the district are lower than corresponding state average in 1981 as well as 1991. However the GFR, GMFR, TFR and TMFR of the district is higher in 1991 as compared to 1981. The CBR of the district has decreased to 32.10 in 1991 from 37.22 in 1981.

ANNEXURE III (ii)

MEASURES OF FERTILITY AND MEAN AGE AT MARRIAGE IN THE STATE AND DISTRICT - CENSUS 1991

Fertility Measures	District :Raigarh			State : Undivided Madhya Pradesh		
	Total	Rural	Urban	Total	Rural	Urban
No. of children ever born to each married 45-49woman in the age group	3.79	3.75	4.21	4.83	4.93	4.46
Mean age at marriage	17.87	17.86	18.03	16.62	16.39	17.48
Child Woman Ratio (0-4 years)	505	508	474	599	629	507

Chhattisgarh was a part of Madhya Pradesh state during Census 1991. As such the data pertaining to undivided Madhya Pradesh is presented in respect of Chhatisgarh state.

The average number of children born to each married woman in the age group 44-49 of the district 3.79 happens to be lower than State average of 4.83. This measure is higher in Urban area 4.21 per cent compared to rural areas where it is 3.75 per cent of the district. This is different than State where rural measure is higher than the urban measure.

Mean age at marriage of the district 17.87 is higher than the state average. This is considered desirable towards population control. The child woman ratio of the district 505 is also less than the state average 599. The rural-urban distribution of this measure in the district is in accordance to the state.

Chhattisgarh was a part of Madhya Pradesh state during Census 1991. As such the data pertaining to undivided Madhya Pradesh is presented in respect of Chhatisgarh state.

The table shows that the mortality rates for all classifications of the district is in general lower than the corresponding state figures in 1991. The child mortality q(1) of the district was more than state average in 1981, but it has gone down to 112 against state average 133 in 1991. It indicates better control in child mortality of the district. Contrary to the State, the table also reveals that the male mortality rate of the district is higher than the female mortality rate.

ANNEXURE IV(I)

POPULATION OF INMIGRANTS IN THE DISTRICT BY PLACE OF BIRTH : CENSUS 2001

State- Chhattisgarh **District : Raigarh**

(Source- Migration Table D-1)

Note: Percentages are given in brackets.

This table presents the number of in migrants by place of birth of enumeration within the district distributed in four classifications i.e. (i) Migration from within the state, (ii) Migration from other states of India,(iii) Migration from foreign place and (iv) Unclassified.

It is observed that the migration by birth from within the state is maximum 86.3 per cent of total migration. The migration from within the district but outside the enumeration place is 63.1 per cent whereas migration from other districts of the state is 23.2 per cent. Migration from other states is 13.3 per cent and the migration from outside India is 0.4 per cent of the total migration. It is also seen that the female migration is much higher than the male migration in first two classifications which is due to the migration of females after marriage.

ANNEXURE IV(II)

POPULATION OF INMIGRANTS BY PLACE OF LAST RESIDENCE : CENSUS 2001

State- Chhattisgarh **District : Raigarh**

Last Residence	Population and Percentage		
	Persons	Male	Female

Total population	1,265,529	634,597	630,932

Source- Migration Table D-2

Note: Percentages are given in brackets.

Migration of population by place of last residence distributed in four classifications is presented in this table. It is seen that the migration by usual place of last residence from within the state is highest 86.9 per cent of total migrated population. Within this classification, the migration from within the district is 64.8 per cent and only 22.1 per cent migration is from other districts of the state. Migration from other states of India outside enumeration state works out to 12.9 per cent of total migration and it is only 0.2 per cent from outside India. Mostly, sexwise anlysis reveals much higher migration of females which is obviously due to the movement of females after marriage.

ANNEXURE IV(III)

(Source- Socio Cultural Table C-2)

Note: Percentages are given in brackets.

The above table reflects that the population (46.1 per cent) of the district comes under the never married class. When compared to state, the percentage of never married population of the district is lower than the state. Contrary to this the percentage of married population of the district is higher than the state. The state average is lower than the district in respect of widowed and it is equal in case of divorced population. The proportion of nevermarried persons is higher in urban areas than rural but married persons are lower in the urban areas as compared to the rural areas of the district.

This annexure presents the proportionate distribution of literates by different educaional levels in specific age groups. As the population in the age group 0-6 do not come within the purview of literates, it has been shown separately.

It is seen that out of 1,063,974 persons belonging to the age 7 and above 746,495 are literates and thus, the literacy rate of the district works out to 70.2 per cent. Similarly the male and female literacy works out to 82.7 and 57.6 per cent respectively.

68,126 persons have been recorded to attain education up to primary level in the age group 7-14 which is only 29.8 per cent of population in this age group.
