Foreword

The District Census Handbook (DCHB) is brought out for each district since the first Census after Independence and is one of the most widely used publications compiled and prepared by the Census Organisation on behalf of the State Governments and the Union territory Administrations. This publication provides Primary Census Abstract (PCA) data up to village level for the rural areas and provides similar details ward-wise for each city or town, and also provides the present status on availability of important civic amenities/infra-structural facilities in villages and towns of the district concerned. This publication has proved to be of immense utility, as it is considered as an essential and basic document for the purpose of delimitation of constituencies, formulation of local level and regional plan and also as an aid to district administration.

The publication of District Census Handbook(DCHB) was first introduced during the 1951 Census which contained a few important Census tables and PCA for each village and town of the district. Thereafter, at each successive Censuses the scope and coverage of this publication was enlarged. The DCHB published at the 1961 Census provided a comprehensive descriptive account of the district, administrative statistics, Census tables and a village and town directory including PCA. The 1971 Census-DCHB series was planned in three parts. Part-A related to village and town directory, Part-B to village and town PCA and Part-C comprised analytical report, administrative statistics, district Census tables and certain analytical tables based on PCA and amenity data in respect of villages. However, in some States, Part-C was confined to district Census tables and in a few cases altogether given up due to delay in compilation and printing. At the 1981 Census, new features along with the restructuring of the formats of village and town directory were introduced in the DCHB. These were published in two parts for each district. While Part-A comprised village and town directories, the PCA of village and town (ward-wise) including the Scheduled Castes and the Scheduled Tribes PCA up to c d block/town level were provided in Part-B. In restructuring the format of Village Directory, all the amenities except electricity were brought together and if any amenity was not available in the referent village the distance in broad ranges from the nearest place having such amenity was given. Information on some new items such as Adult Literacy Centres, Primary Health sub-Centres and Community Health Workers in the village were provided so as to meet the requirements of some of the Revised Minimum Needs Programme. Similarly information on approach to the village was also provided for the first time in the Village Directory so as to give the details on number of inaccessible villages in each district. In the Town Directory another statement (IV-A) on slums was introduced to provide the details on civic and other amenities in the notified slums of Class I and Class II towns. Apart from this, one column on the Scheduled Castes and the Scheduled Tribes population and another on Adult Literacy classes/centres were added in the Statements IV and V respectively.

The manner of presentation of the DCHBs of the 1991 Census was by and large the same as followed in the 1981 Census. The format of PCA was however restructured slightly in the 1991 Census. Nine-fold industrial classification of main workers was given as against four-fold

ndustrial classification presented in the 1981 Census In addition the sex-wise population in the 0-6 age group was also included in the PCA for the first time with a view to enable data users to compile more realistic literacy rate as all children below 7 years of age had been treated as illiterate at the time of 1991 Census Another important addition in the DCHB of the 1991 Census was the Community Development Block level presentation of village directory and PCA data instead of the traditional Tahsil/Taluk/PS level presentation It was expected that the presentation of village directory and PCA data at CD block level will help the planners in formulation of micro level development plans as the CD block is the lowest administrative unit for developmental planning Further in order to facilitate the administrators, planners and researchers intending to use village directory and PCA data, either from the magnetic tapes/floppies or from the published records, both the computer and manual codes for each village were provided for the 1991 Census along with the corresponding codes of the 1981 Census

The present series of the DCHB in 2001 Census have been made more informative and exhaustive in terms of coverage and content The content of village directory has been broadened by including more types of facilities such as bank, recreational and cultural facilities, newspapers and magazines available in villages Information on most important commodity manufactured in village and also income and expenditure of Gram Panchayat, wherever possible are provided Specific details on distances, in case a basic amenity is not available in the referent village is also given These include distances in respect of availability of primary and middle school and college (in respect of the educational facility), Allopathic Hospital, Maternity & Child Welfare Centre and Primary Health Centre (in respect of the medical facility) drinking water, Post Office and phone, communication, bank, credit societies and recreational facilities In town directory, information on all types of slums, whether notified/recognised by the respective town authority or not and in respect of all statutory towns irrespective of their class as against only Class I and Class II towns of the 1981 and 1991 Censuses are provided With reference to the village concerned, the nearest city with 5 lakh and above population has also been given in addition to 1 lakh and above population The varied basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements A significant addition in the publication is inclusion of analytical notes as annexures on important aspects concerning Census data on (i) fertility, mortality and migration (ii) various measures of fertility and mean age at marriage, (iii) percentage distribution of migrants by place of birth/place of residence, (iv) main religions, (v) marital status of population, (vi) age, sex and education, and (vii) distribution of different mother tongue, all based on 1991 Census The eight digits permanent location code (PLCN) to all the villages and towns have been assigned keeping in view the future needs

It is worthwhile to mention that the District Census Handbooks of the Census of India, 2001 are being made available for the first time in electronic format in addition to printed volumes keeping in view the demand of data users

This publication is a collaborative task of the State Government and the Census Organisation The village and town level amenity data have been collected compiled and computerised in prescribed record structure under the direction of Shri Sudhir Kumar Rakesh, Director of Census Operations Bihar, Patna on behalf of the State Administration At the same time much effort has been made to ensure comparability with the corresponding 1991 Census data and also similar information brought out by the respective State Governments in annual reports and statistical handbooks for various years after 1991 The task of planning, designing and coordination of this publication was carried out by Shri R G Mina, Deputy Registrar General (C&T) and Dr I C Agrawal Senior Research Officer of Social Studies Division Dr R P Singh, Deputy Registrar General (Map) provided the technical guidance in the preparation of maps Whereas Shri Anil Kumar Arora, Deputy Director of Data Processing Division who worked under the overall supervision of Shri Himakar, Addl Director(EDP) helped in preparation of

record structure for computerisation of village and town directory data and the programme for the generation of Village Directory and Town Directory statements including analytical inset tables The draft District Census Handbook manuscripts received from the Census Directorates have been scrutinised in the Social

Preface

The history of the publication of District Census Handbooks goes back to the 1951 Census and since [illegible] these are printed in every Census because of their wide ranging utility. Census after Census much innovations/modifications have taken place in the District Census Handbooks in terms of coverage and contents of population data. This is the most valuable district level publication brought out by the Census Organisation on behalf of the State Government. It, inter alia, provides data/information on some of the basic demographic and socio-economic characteristics and availability of certain important civic amenities/facilities in each village and town of the respective districts. This publication has, thus, proved to be of immense utility to the planners, administrators, academicians and researchers. It is hoped that this publication will serve the purpose of the ever increasing demand for the micro-level data in this era of planned development.

The present volume of the District Census Handbook (DCHB) in 2001 Census has been made more informative and exhaustive in terms of coverage and content. The content of Village Directory has been broadened by including additional facilities such as bank, recreational and cultural facilities, newspapers and magazines available in villages. For the first time in this volume information on the most important commodity manufactured in village is provided. In Town Directory, information on all types of slums, whether notified/recognized by respective town authorities or not is provided for each statutory town. During 1981 and 1991 Censuses this information was, however, restricted to class I and class II towns only. The various basic amenities available in the villages and towns are analysed in depth with the help of a number of cross-classified inset tables and statements. A significant addition in the publication is inclusion of analytical notes presented as annexures on important aspects concerning Census data on (i) fertility, mortality and migration (ii) various measures of fertility and mean age at marriage, (iii) percentage distribution of migrants by place of birth/ place of residence, (iv) main religions, (v) marital status of population, (vi) age, sex and education, and (vii) distribution of different mother tongues, all based on 1991 Census. The eight digit permanent location code (PLCN) to all the villages and towns have been assigned keeping in view the future needs.

It is worthwhile to mention that the District Census Handbooks of the Census of India, 2001 are being made available for the first time in electronic format in addition to printed volumes keeping in view the demand of data users.

The District Census Handbooks are brought out in two parts, viz. (i) part A containing the village and town directories and (ii) part B – village and townwise primary Census Abstracts pertaining to general population. It also contains the District Primary Census Abstracts for Scheduled Castes and the Scheduled Tribes Population.

The village and town level amenity data have been collected through the Block Development Officers and the Vice Chairmen/Executive Officers of the Municipalities and Notified Area Committees who functioned as Charge Superintendents under the District/Sub-divisional level Officers.

The analytical note has been prepared on the basis of the inset tables generated from the computerized data of Village Directory, Town Directory and Village/Urban Primary Census Abstract. It takes note of the social, economic and demographic changes which have taken place in the districts during the decade. District and C.D. Block Maps containing useful information on many items have also been included in this volume.

This publication is a joint venture of the State Government and the Census Organisation
