# *PREFACE*

*Birth and Deaths are the two most important vital events that define life of an individual. Not only do they describe the legal existence of an individual, registration of these events is a primary source of vital data of the population to which they belong. Civil Registration is a continuous, permanent, compulsory recording of the occurrence and characteristics of vital events, like births, deaths and still births. These vital statistics are invaluable for planning, monitoring and evaluating various programmes related to primary health care, family planning, maternal and child health, education etc. Information collected through the registration process about vital events provides useful and important statistics.*

*2. This issue of the Report on 'Vital Statistics of India based on the Civil Registration System' for the year 2022 provides an overview of the working of the Civil Registration System (CRS) in the country and presents a compilation of data on registered births, deaths, infant deaths and still births with rural-urban & sex-wise break-up and sex ratio at birth based on Civil Registration Records. Based on the Annual Reports of the States/UTs, the report for the year 2022 containing key information of events pertaining to the time period 1st January 2022 to 31st December 2022 has been brought out for the convenience of users.*

*3. The publication is divided into two parts. Part I provides a brief review of the Civil Registration System and contains a summary analysis of data on registered births, deaths, infant deaths and sex ratio at birth based on registered births at the State level. Part II consists of the main tables which provide State and District-wise data on registered births, deaths, infant deaths and still births with rural-urban & sex-wise break-up.*

*4. The data source for the report is the statutory Annual Statistical Report prepared by the Chief Registrars of Births & Deaths of States/UTs. I take this opportunity to express my sincere gratitude to all the Chief Registrars of Births & Deaths of various States/UTs for their kind cooperation in providing the requisite information. I am thankful to each one of them for their invaluable and continuing cooperation. I am hopeful that more dynamic implementation of the provisions of the RBD Act-1969 shall help reduce the time gap and establish this as a reliable source of information on Birth and Death registration in the country.*

*5. The report has been prepared by the CRS Section of this office. I would like to place on record my appreciation for the efforts put in by all the officers and staff working in the CRS Section of the Office of the Registrar General and the Officers/Staff connected with the Civil Registration System in the States/UTs.*

# EXECUTIVE SUMMARY

Civil Registration System (CRS) in India is the unified process of continuous, permanent, compulsory, and universal recording of vital events (births, deaths, stillbirths) and characteristics thereof. The Registration of Births and Deaths Act, 1969 (Act No. 18 of 1969) provides for the compulsory registration of births and deaths. Civil Registration records are the best source of Vital Statistics. For the individual, records emanating from CRS provides her/his legal identity and access to the rights of a citizen including entitlements (social benefits provided by the Government). For the country, the requirement of a complete Civil Registration System is a must as it has important administrative and statistical uses. The data generated through a complete and up to date CRS is essential for socio-economic planning and to evaluate the effectiveness of various social sector programmes. They also serve as the cornerstone of the public health system. The Annual Report on Vital Statistics of India based on Civil Registration System for 2022 has been brought out on the basis of reports provided by the Chief Registrar of Births and Deaths of respective States/Union Territories. ## CHAPTER – I

## CIVIL REGISTRATION SYSTEM - AN INTRODUCTION

1.1 The requirement for a complete and up to date Vital Statistical System to yield reliable data on vital events hardly needs any emphasis. These data are essential for socio-economic planning and development and also to evaluate the effective implementation of various public schemes and programs. The main sources of data on vital events in India are Civil Registration System (CRS), Sample Registration System (SRS) and Population Census. Though the Population Census is the main source of information on population and its characteristics; however, being a decennial exercise, it does not provide the measure of changes in population from year to year. The measures of fertility and mortality derived from Census are centered on the midpoint of the decade and as such do not provide yearly change in the population. Of the other two sources of vital statistics for getting the vital rates on a regular basis, the SRS has been designed to provide reliable estimates at National and State level. Robust estimates of vital rates at District level on an annual basis through sample survey are difficult to obtain on account of prohibitively large sample size and variety of resultant factors such as controlling of non-sampling errors etc. CRS is thus the only source for providing vital rates at district level. Rather, a complete CRS can provide these rates at lower administrative levels.

1.2 The Civil Registration System (CRS) may be defined as a unified process of continuous, permanent, compulsory and universal recording of the vital events and characteristics thereof, as per legal requirements in the country. In India, the Civil Registration System covers registration of births and deaths. Civil registration system provides the best source of information on the vital rates at all levels. Ensuring cent percent coverage of vital events by registration machinery can help in getting the critical vital statistics at all administrative levels, equally important for planning and research. Therefore, emphasis should also be given to the proper monitoring of the activities under the system. Civil registration system is considered to be complete if it covers 100 percent births and deaths taking place within a country or area and birth and death certificates are issued to all registered events.

1.3 The registration records are primarily useful for their value as legal documents and secondarily as the source of vital statistics. Civil registration as a source of vital statistics is relatively less expensive, as the statistics generated from the registration records are the by-products of an essential administrative process. The registration records can also generate current and continuous statistics, which can be more accurate than any other method of data collection apart from being a continuous source of such data. However, the accuracy of the vital statistics obtained through the registration system depends much on the completeness and promptness with which events are registered and the correctness of the information in the registration records. The improvement in the system of registration of births and deaths is critically dependent on the importance given by the respective States and District administrations to this work and regular monitoring by them. Besides, the level of awareness

among the general public about the utility of birth or death certificate is also equally and crucially important.

1.4 Vital statistics obtained through registration records at different administrative levels enable estimation of the size, structure and geographical distribution of the population except for migration. Vital statistics also enables the projections for coming years on the basis of probable trends of fertility and mortality as derived from these vital statistics and their interactions with social, economic and other demographic factors. The vital statistics data generated through an effective Civil Registration System is of immense use for formulation of various development and welfare programmes/ schemes and increases their effectiveness at State and District level. The Civil Registration data acquires paramount importance in the wake of 73rd and 74th amendments to the constitution of India, as it can provide data at local level for micro level planning, monitoring and evaluation of schemes. At national level, the vital statistics data generated through Civil Registration is also quite useful for medical research and in the study of sex ratio, mortality rates and also in the study of causes of deaths.

**Registration of births and deaths in India**

1.5 In India, the registration of births and deaths is carried out under provisions of the Registration of Births and Deaths (RBD) Act, 1969, a central Act implemented by State/UT Governments. The registration is done by the Registrar of the local area, appointed by concerned State/UT Government.

1.6 Provision for registration of births and deaths and the mechanism thereof had been in existence in India for more than a century. Earlier, the work of registration of birth and death was carried out under various laws and byelaws existing at that time in different parts of the country. The need for improvement in the vital statistics system was felt for long and, therefore, after detailed deliberations at various levels, the Registration of Births & Deaths Act, 1969 was enacted providing compulsory registration of births and deaths in India. Since then, this Act has been enforced uniformly across all the States and Union territories (UT). This Act provides for registration of births and deaths and publication of statistical reports annually based on the civil registration data. The enactment of this Act has provided a common framework for putting in place an effective system of registration of births and deaths in the country.

1.7 In order to simplify and speed up the process of registration and to bring in uniformity in birth and death registration formats, the registration system was revamped in the year 2000. Under the revamped system, the procedure for registration of births and deaths was also modified to some extent and the forms were redesigned. The revamped system became operational in 2000 in all States/Union Territories except Assam, Arunachal Pradesh, Gujarat, Haryana, Himachal Pradesh, Jharkhand, Odisha, Punjab, Uttarakhand, and Uttar Pradesh. It was implemented in Assam, Arunachal Pradesh, and Odisha in 2001, Haryana in 2002, Himachal

Pradesh, Uttarakhand, and Uttar Pradesh in 2003, Gujarat and Punjab in 2004, and Jharkhand in 2009.

**Statistical Reports**

1.8 System of registration of births and deaths is constantly generating statistical information at the local level. The information contained in the reporting forms is consolidated by the Registrar for onward transmission to the Chief Registrar of Births & Deaths or to any officer specified in the concerned State/UT. The Chief Registrar of the States/UTs, who are the chief executive authorities for the activities on registration of Births and Deaths in the State/UT, are mandated to submit to the State Government Annual Report on the Working of the Act in the State/UT along with the Statistical Report referred under section 19(2) on registered births and deaths for each year immediately following the year to which the report relates to. The Chief Registrars are also required to send a copy of these Reports to the Registrar General, India, Govt. of India.

1.9 Based on the Annual Reports prepared by the States/UTs, the Office of the Registrar General, India, brings out an annual comprehensive report entitled "Vital Statistics of India based on Civil Registration System". These reports have been brought out since 1958 (Before the enactment of the Act, only statistical reports were brought out). However, some of the States are not bringing out their Annual Statistical Reports in time, and this in turn, delays the publication of the corresponding national report. It has also been observed that some States also do not include all the prescribed tables in their reports thereby creating a limitation while bringing out the national report. However, notwithstanding all these constraints, this report provides vital indicators including the District-wise registered births and deaths along with infant deaths with the sex-wise and rural-urban break-up of registered events for the year 2022.

2.1. **Inter Departmental Coordination Committees (IDCC)**: In order to resolve the operational problems and for proper implementation of the provisions of the RBD Act and corresponding State Rules, coordination among the implementing departments is essentially required. On the other hand, the work of registration of births and deaths in most of the States/UTs is being done through the officials drawn from more than one department of the State Government/Union Territory Administration. The need for coordination between the stake holder departments is a pre-condition for effective functioning of the system in each of the State. In view of the above, the State level Inter-Departmental Coordination Committees (IDCCs) have been constituted in States and Union Territories. In most of the States / UTs, IDCC committee is chaired by the Principal Secretary/Secretary of the Department from which the Chief Registrar belongs.

In order to formulate the strategies for further improvements in Civil Registration System and effective implementation of the provisions of the RBD Act in the respective State, it is desired to convene the meeting of such committee at least once in a year. However, it has been observed that despite persuasion of this office with the State Governments from time to time, such meetings have not been convened regularly by most of the States/ UTs.

During 2022, such meetings were held in 23 States/UTs namely Arunachal Pradesh, Assam, Bihar, Chhattisgarh, Goa, Gujarat, Himachal Pradesh, Jharkhand,

Further, 4 States are in the category of more than 80 to less than or equal to 90 percent, 14 States/UTs are in the category of more than 50 to less than or equal to 80 percent, and the remaining 4 States/UTs are under the category of less than or equal to 50 percent.

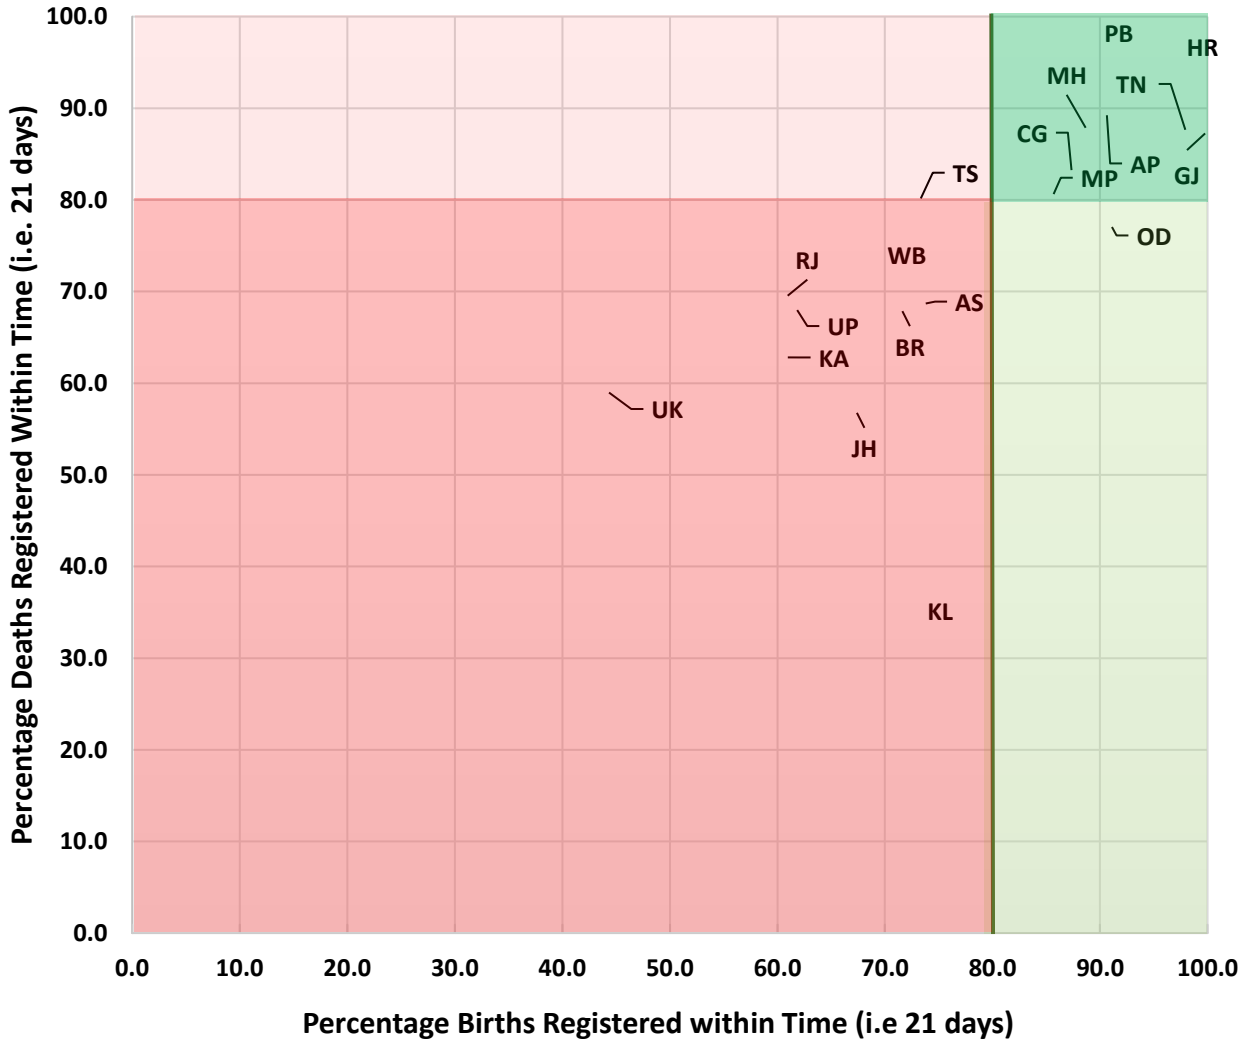

3.9.4 Statement 12 also shows the percentage of deaths registered within the prescribed time limit of 21 days to the total deaths registered in the state and arranged in descending order. 9 States/UTs have achieved more than 90% registration of death within the prescribed time limit of 21 days. Other 9 States/UTs fall in the category of more than 80 to less than or equal to 90 percent, 12 States/UTs are in the category of more than 50 to less than or equal to 80 percent and the remaining 5 States/UTs are under the category of less than or equal to 50 percent in death registration within the prescribed time limit of 21 days.
